Agreements (in file as of scan date): N **Book or Doc #:**

JAMESTOWN ENTRANCE PLAZA AND PARKING LOT IMPROVEMENTS

PROJECT CODE NUMBER: 425-16133
 JAMES CITY COUNTY, VIRGINIA

EROSION CONTROL APPROVAL NOTES
 1. The DSWC cases be visited one week prior to the pre-construction conference and one week prior to the commencement of final clearing activity.
 2. The applicant shall remain responsible to ensure the implementation of the approved erosion and sediment control plan and compliance with the Virginia Erosion and Sediment Control Regulations.
 3. Any significant alterations, modifications or deletions to the approved plan must be approved by the DSWC prior to implementation (unless emergency situation exists).

BEFORE DIGGING CALL "MISS UTILITY"
 OF VIRGINIA AT 1-800-552-7001

GENERAL NOTES

- ALL CONSTRUCTION SHALL CONFORM TO CURRENT COUNTY AND/OR VDOT STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE SPECIFIED.
- CONTRACTOR SHALL SECURE THE LATEST EDITION OF THE VIRGINIA EROSION AND SEDIMENT CONTROL HANDBOOK AND COMPLY WITH ALL COUNTY REQUIREMENTS FOR EROSION AND SEDIMENT CONTROL.
- ALL CUTS, VEGETATION AND DELETERIOUS MATERIAL ENCOUNTERED SHALL BE REMOVED AND DISPOSED OF OFF SITE.
- SELECT MATERIAL IS REQUIRED FOR FILL AND BACKFILL UNDER PARKING LOT, FOOTINGS, AND STRUCTURES. IT SHALL BE PLACED IN LAYERS, NOT TO EXCEED EIGHT INCHES (8") IN THICKNESS AND COMPACTED TO 95% OF MAXIMUM DENSITY AS DETERMINED BY ASTM D-698.
- ALL GREEN AREA, WITHIN LIMITS OF CONSTRUCTION, TO BE TOPSOILED, FERTILIZED, SEEDED, AND MULCHED.
- CONTRACTOR SHALL OBTAIN AT HIS OWN EXPENSE, ANY PERMIT OR BOND IF REQUIRED BY ANY GOVERNMENT AGENCY PRIOR TO CONSTRUCTION.
- CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING, PROTECTING, AND RESOLVING ANY CONFLICTS WITH EXISTING UTILITIES AND SHALL REPAIR, AT HIS OWN EXPENSE, ALL UTILITIES TO BE RELOCATED OR DAMAGED BY CONSTRUCTION.
- ANY ERRORS OR DISCREPANCIES SHALL BE REPORTED TO THE ENGINEER BEFORE PROCEEDING WITH THE WORK.
- DEWATERING OR EXCAVATION, IF NEEDED, IS PART OF THIS CONTRACT.
- BEFORE DIGGING CALL "MISS UTILITY" OF VIRGINIA 1-800-552-7001.
- CONTRACTOR SHALL OBTAIN PERMITS FROM THE STATE HIGHWAY DEPARTMENT PRIOR TO ANY WORK IN THE STATE'S RIGHT-OF-WAY. THE CONTRACTOR SHALL RESTORE AND CLEAN UP THE SITE TO THE SATISFACTION OF THE HIGHWAY DEPARTMENT.

CONSTRUCTION SEQUENCE FOR CONVERTING SEDIMENT TRAP/BASIN TO DRY SWALE

- SEDIMENT TRAP/BASIN SHALL REMAIN IN OPERATION UNTIL ALL MAJOR LAND DISTURBING ACTIVITIES HAVE BEEN COMPLETED AND THE SITE HAS BEEN STABILIZED.
- CONTRACTOR SHALL EXCAVATE ANY ACCUMULATED SEDIMENT AND DISPOSE OF IN A LAWFUL MANNER.
- ADDITIONAL EXCAVATION BELOW THE SEDIMENT TRAP BOTTOM WILL BE REQUIRED TO INSTALL THE UNDERDRAIN PIPING AND WELL DRAINED FILL PER THE DETAIL ON SHEET C25 (MATERIAL DESCRIPTION IS ALSO PROVIDED ON THIS SHEET).
- THE POND BOTTOM AND ANY OTHER DENUDED AREAS IN THE DRY SWALES SHALL BE SEEDED IMMEDIATELY.

 TOLL FREE: 1-877-426-9128 FAX: (703) 491-9656
 e-mail: hydrologic.solutions@erols.com

*** NOTE:**

DETAILS SHOWN ON THIS SHEET ARE FOR HYDROLOGIC SOLUTIONS "STORMCHAMBER" PRODUCT ONLY. SEE SHEET C18 FOR ALTERNATE MANUFACTURERS.

Design Notes:

- Capacity of void provided by stone is calculated at 40%
- Capacity of StormChamber™ is 10 cu. ft. per linear foot
- Design unit capacity is 13.33 cu. ft. per linear foot
- Total stone required per linear foot is 8.33 cu. ft.
- Total design storage capacity per chamber at lay up length is 100.5 cu. ft.

BURIAL REQUIREMENTS

A. 1 1/2" - 2" Crushed, Washed Stone Base, Minimum.	6"
B. 1 1/2" - 2" Crushed Washed Stone to Top of Chambers and Cover with Filter Fabric.	34"
C. 90% Compacted Clean Fill Cover or 1 1/2"-2" Crushed Washed Stone Top of Chamber to Grade for Non-Trafficked, H-10 Installations, Minimum.	12"
D. 90% Compacted Clean Fill Cover or 1 1/2"-2" Crushed Washed Stone Top of Chamber to Grade Under 2 1/2" of Pavement for H-20 Trafficked Installations, Minimum.	17"
E. 90% Compacted Clean Fill Cover or 1 1/2" - 2" Crushed Washed Stone Top of Chamber to Grade for Unpaved H-20 Trafficked Installations, Minimum.	18"

Engineering Specifications for StormChamber™

Each unit will be 34.04" high, 60" wide and 102.5" long.

Lay-up length is 97.1" (start and end unit) and 91.1" (middle unit).

Each chamber will be formed from high molecular weight/high density polyethylene.

Use of filter fabric between the soil and stone backfill layer and lining the side walls of the excavated area is required to prevent intrusion of soil or silt into the chambers and surrounding stone.

Each chamber has 14 ribs of approximately 3.6" in height, 3.8" wide at the top and tapering to 4.4" at the bottom. Spacing of the ribs at the bottom of the chamber is approximately 4.9" and approximately 3.2" at the top. One smaller rib sized dimensionally to effectively nest under and interlock to connect units is 2.9" high, 3.3" wide at the top of rib, and 4.1" wide at the base.

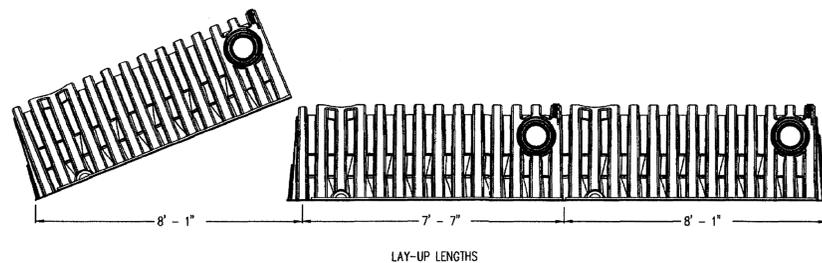

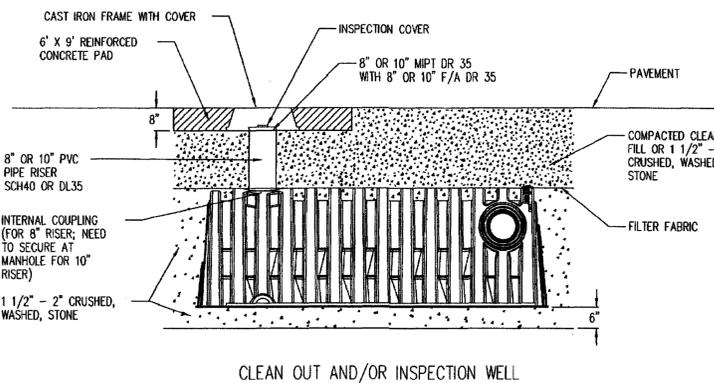

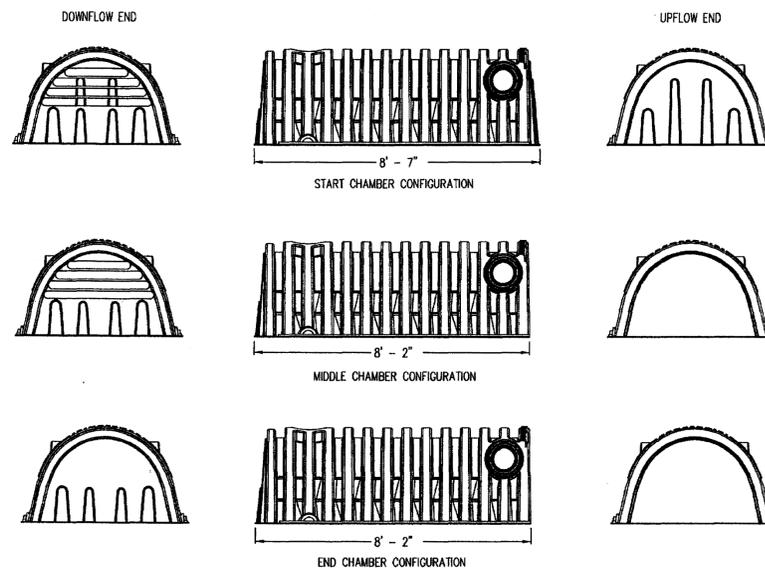

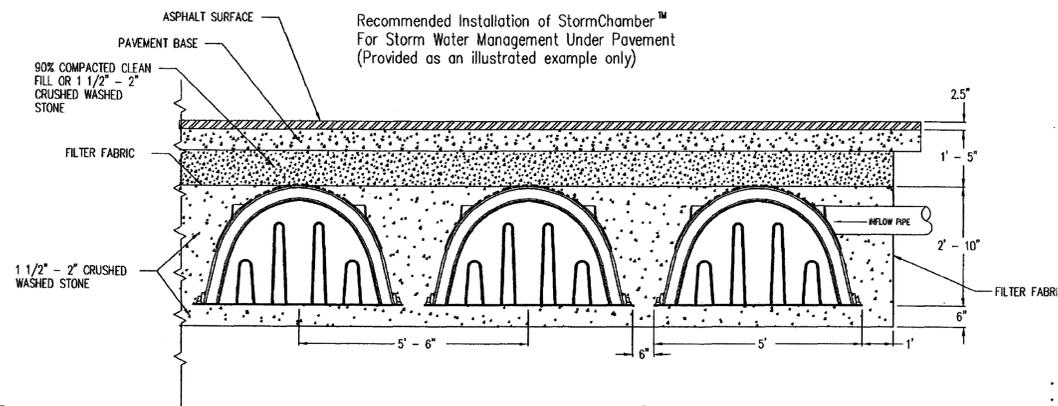

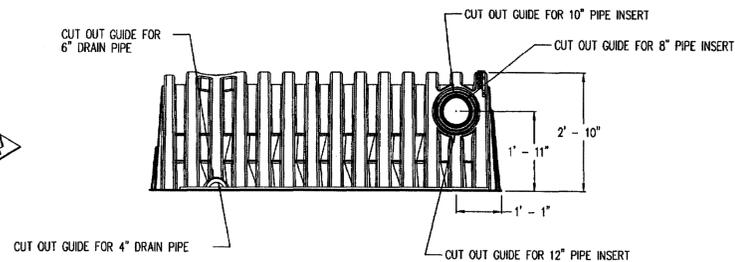

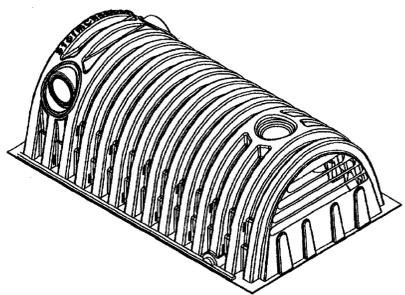

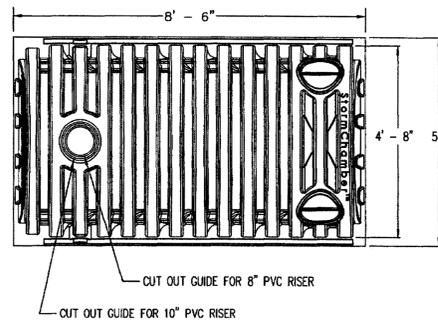

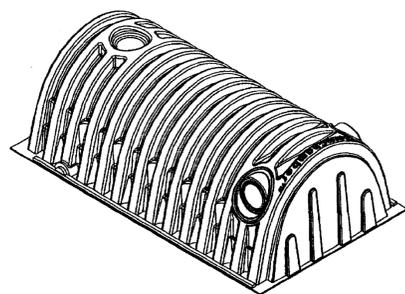

Overall height to the inside rib is 30.44".
 Overall height to the outside rib is 34.04".

Invert height for 12" pipe is 16.49".
 Invert height for 10" pipe is 17.49".
 Invert height for 8" pipe is 18.49".

Each unit has the ability to accept up to a 12" feed pipe in the unit's side portal.

Each unit is designed to handle 10 cubic feet of storage per linear foot, for a total of 85.42 cubic feet.

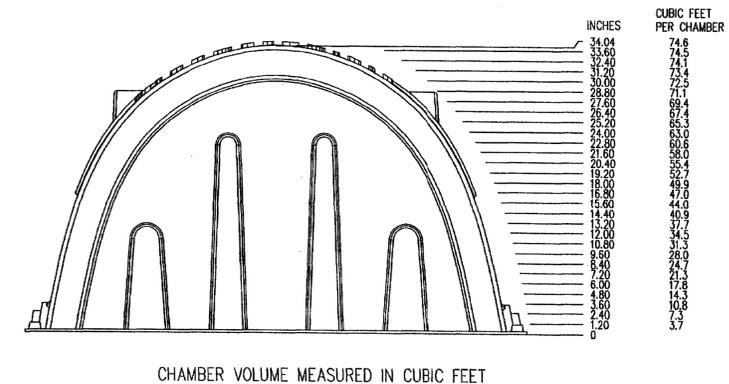

Stone diameter will be 1.5" - 2".

INFILTRATION VERSUS OTHER STORMWATER BMPs
 (AS MEAN PERCENT REMOVAL)

POLLUTANT PARAMETER	INFILTRATION	WETLAND	WATER QUALITY POND	FILTERING SYSTEM	WATER QUALITY SWALE
Total Phosphorus	65	51	45.5	45	14.5
Total Nitrogen	82.5	20.9	30	32	10.5
Lead	98	63	66.5	71	50
Zinc	99	53.5	50.5	69	49
Total Suspended Solids	88.5	78	70	81	66
Organic Carbon	82	28	35	57	23

NOTES

- THIS PROPERTY APPEARS TO BE IN ZONE "AE" (ELEVATION 8.5) AS SHOWN ON THE FLOOD INSURANCE RATE MAPS FOR JAMES CITY COUNTY, COMMUNITY-PANEL NO. 510201-0040B, DATED JANUARY 6, 1991.
- UNDERGROUND UTILITIES AS SHOWN HEREON ARE BASED ON AVAILABLE UTILITY MAPS ON FILE WITH JAMES CITY COUNTY AND PRIVATE UTILITY COMPANIES. HORIZONTAL AND VERTICAL LOCATIONS ARE APPROXIMATE AND SHALL BE FIELD VERIFIED BY CONTRACTOR.
- AERIAL TOPOGRAPHY SHOWN ON SHEET C1 WAS PROVIDED TO RICKMOND ENGINEERING, INC. BY THE JAMESTOWN-YORKTOWN FOUNDATION.
- THIS SURVEY DID NOT INVESTIGATE THE EXISTENCE OR NONEXISTENCE OF ANY HAZARDOUS MATERIALS OR ENVIRONMENTAL ISSUES THAT MAY AFFECT THE PROJECT.
- RICKMOND ENGINEERING, INC. DOES NOT GUARANTEE ALL EASEMENTS AND/OR RESTRICTIONS HAVE BEEN SHOWN HEREON.
- WETLAND DELINEATION PERFORMED BY ENVIRONMENTAL SPECIALTIES GROUP, INC. AND FIELD LOCATED BY RICKMOND ENGINEERING, INC.

TOP OF DITCH	-----
DRAIN BASIN	■
EDGE OF GRAVEL GRADE	EG 8.4

- NOTES:**
- THE PERIMETER CHANNELS AROUND "THE JAMES FORT" ARE TO BE PRECAST INTERLOCKING MODULAR POLYMER CONCRETE TRENCH DRAINAGE SYSTEM MEETING THE FOLLOWING REQUIREMENTS:
 - 4" NOMINAL WIDTH AND MANUFACTURED WITH A CONTINUOUS SLOPE OF 0.6%
 - CHANNEL AND GRATING COMBINATION SHALL BE DESIGNED TO WITHSTAND IMPOSED LOADINGS UP TO 175 PSI (28,000 LBS)
 - GRATE TO BE SLOTTED GALVANIZED STEEL PAINTED WITH SELF-PRIMING HIGH SOLIDS EPOXY COLOR OF CHOICE BY THE OWNER
 - MATERIAL WATER ABSORPTION RATE SHALL NOT EXCEED 0.1% BY WEIGHT
 - MATERIAL SHALL BE DESIGNED TO WITHSTAND A COMPRESSIVE STRENGTH RANGE BETWEEN 11,000-15,000 PSI, TENSILE STRESS OF 2,900 PSI, FLEXURAL STRENGTH OF 2,900 PSI, SALT PROOF, FROST PROOF, AND RESISTANT TO DILUTE ACIDS AND ALKALIS
 - SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS AND RECOMMENDATIONS
 - THE INLINE DRAIN BASINS AROUND "THE JAMES FORT" ARE TO BE 18" PVC DRAINAGE BASINS WITH SOLID (N=20 RATED) GRATES MEETING THE FOLLOWING REQUIREMENTS:
 - JOINT TIGHTNESS SHALL CONFORM TO ASTM D3212
 - MECHANICAL PROPERTY REQUIREMENTS FOR FABRICATED FITTINGS SHALL CONFORM TO ASTM F794, F949 AND F1336
 - SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS AND RECOMMENDATIONS
 - THE PERIMETER DRAIN BASINS AROUND "THE INDIAN VILLAGE" ARE TO BE 24" PVC DRAINAGE BASINS WITH (N=20 RATED) GRATES MEETING THE FOLLOWING REQUIREMENTS:
 - JOINT TIGHTNESS SHALL CONFORM TO ASTM D3212
 - MECHANICAL PROPERTY REQUIREMENTS FOR FABRICATED FITTINGS SHALL CONFORM TO ASTM F794, F949 AND F1336
 - SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS AND RECOMMENDATIONS
 - ALL STORMWATER PIPES ARE TO BE HDPE SEWER PIPE CONFORMING TO AASHTO M 294, TYPE S SPECIFICATIONS WITH SMOOTH WATERWAY FOR COUPLING JOINTS, UNLESS OTHERWISE NOTED.
 - ELEVATIONS SHOWN HEREON ARE BASED ON NGVD 1929.
 - TEMPORARY BENCH MARK FOR THIS PLAN IS A SPIKE IN A POWER POLE LOCATED ON THE EAST SIDE OF JAMESTOWN ROAD IN THE EMPLOYEES PARKING LOT ELEV. = 19.62
 - THE NORTH MERIDIAN SHOWN IS BASED ON THE VIRGINIA STATE PLANE COORDINATE SYSTEM (SOUTH ZONE).
 - APPROXIMATE LOCATION OF LEGACY WALK AND ASSOCIATED APPURTENANCES PROVIDED BY DRAPER ADEN ASSOCIATES E-MAILED TO RICKMOND ENGINEERING, INC. ON 4/11/01. THE CONTRACTOR SHALL REFER TO THE LANDSCAPE PLAN FOR TREE PROTECTION AND TREE REMOVAL DETAILS.
 - THE CONTRACTOR SHALL REFER TO SHEET S1 FOR REQUIRED BOARDWALK GRADING.
 - THE TURF REINFORCEMENT MAT SHALL MEET THE FOLLOWING REQUIREMENTS:
 - RESIST FLOW VELOCITIES OF 25 FPS AT SHEAR STRESSES UP TO 10 LB/SF FOR VEGETATED CONDITIONS
 - SYSTEM SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S PRINTED INSTALLATION INSTRUCTIONS AND RECOMMENDATIONS

**JAMES CITY COUNTY
EROSION AND SEDIMENT CONTROL NOTES**

1. THE PURPOSE OF THE EROSION CONTROL MEASURES SHOWN ON THESE PLANS SHALL BE TO PRECLUDE THE TRANSPORT OF ALL WATERBORNE SEDIMENTS RESULTING FROM CONSTRUCTION ACTIVITIES FROM ENTERING ONTO ADJACENT PROPERTIES OR STATE WATERS. IF FIELD INSPECTIONS REVEALS THE INADEQUACY OF THE PLANNED EROSION CONTROL MEASURES AT ANY PROJECT SITE, APPROPRIATE MODIFICATIONS WILL BE MADE TO CORRECT ANY PLAN DEFICIENCY. IN ADDITION TO THESE NOTES, ALL PROVISIONS OF THE VIRGINIA EROSION AND SEDIMENT CONTROL REGULATIONS SHALL APPLY TO THIS PROJECT.
2. ALL EROSION AND SEDIMENT CONTROL MEASURES SHALL BE INSTALLED AND MAINTAINED IN ACCORDANCE WITH THE "VIRGINIA EROSION AND SEDIMENT CONTROL HANDBOOK." THE CONTRACTOR SHALL BE THOROUGHLY FAMILIAR WITH ALL APPLICABLE MEASURES CONTAINED THEREIN WHICH MAY BE PERTINENT TO THIS PROJECT.
3. ALL POINTS OF CONSTRUCTION INGRESS AND EGRESS SHALL BE PROTECTED BY A TEMPORARY CONSTRUCTION ENTRANCE TO PREVENT TRACKING OF MUD ONTO PUBLIC RIGHT-OF-WAYS. AN ENTRANCE PERMIT FROM VDOT IS REQUIRED PRIOR TO ANY CONSTRUCTION ACTIVITIES WITHIN STATE RIGHT-OF-WAYS. WHERE SEDIMENT IS TRANSPORTED ONTO A PUBLIC ROAD SURFACE, THE ROAD SHALL BE THOROUGHLY CLEANED AT THE END OF EACH DAY.
4. A PRECONSTRUCTION MEETING SHALL BE HELD ON SITE BETWEEN THE COUNTY, THE DEVELOPER, THE PROJECT ENGINEER, AND THE CONTRACTOR PRIOR TO ISSUANCE OF THE LAND DISTURBING PERMIT. THE CONTRACTOR SHALL SUBMIT A SEQUENCE OF CONSTRUCTION TO THE COUNTY FOR APPROVAL PRIOR TO THE PRECONSTRUCTION MEETING. THE CONTRACTOR WILL SUPPLY THE ENVIRONMENTAL DIVISION WITH THE NAME OF THE INDIVIDUAL WHO WILL BE RESPONSIBLE FOR ENSURING MAINTENANCE OF INSTALLED MEASURES ON A DAILY BASIS.
5. SEDIMENT BASINS AND TRAPS, PERIMETER DIKES, SEDIMENT BARRIERS AND OTHER MEASURES INTENDED TO TRAP SEDIMENT ON-SITE MUST BE CONSTRUCTED AS A FIRST STEP IN GRADING AND BE MADE FUNCTIONAL BEFORE UPSLOPE LAND DISTURBANCE TAKES PLACE. EARTHEN STRUCTURES SUCH AS DAMS, DIKES, AND DIVERSIONS MUST BE SEEDED AND MULCHED IMMEDIATELY AFTER INSTALLATION. WITHOUT CAUSING EROSION, A TEMPORARY FILL DIVERSION (STD. & SPEC. 3.10) SHALL BE INSTALLED PRIOR TO THE END OF EACH WORKING DAY.
6. SURFACE FLOWS OVER CUT AND FILL SLOPES SHALL BE CONTROLLED BY EITHER REDIRECTING FLOWS FROM TRANSVERSING THE SLOPES OR BY INSTALLING MECHANICAL DEVICES TO SAFELY LOWER WATER DOWNSLOPES WITHOUT CAUSING EROSION. A TEMPORARY FILL DIVERSION (STD. & SPEC. 3.10) SHALL BE INSTALLED PRIOR TO THE END OF EACH WORKING DAY.
7. SEDIMENT CONTROL MEASURE MAY REQUIRE MINOR FIELD ADJUSTMENTS AT TIME OF CONSTRUCTION TO INSURE THEIR INTENDED PURPOSE IS ACCOMPLISHED. ENVIRONMENTAL DIVISION APPROVAL WILL BE REQUIRED FOR OTHER DEVIATIONS FROM THE APPROVED PLANS.
8. THE CONTRACTOR SHALL PLACE SOIL STOCKPILES AT THE LOCATION SHOWN ON THIS PLAN OR AS DIRECTED BY THE ENGINEER. SOIL STOCKPILES SHALL BE STABILIZED OR PROTECTED WITH SEDIMENT TRAPPING MEASURES. OFF-SITE WASTE OR BORROW AREAS SHALL BE APPROVED BY THE ENVIRONMENTAL DIVISION PRIOR TO THE IMPORT OF ANY BORROW OR EXPORT OF ANY WASTE TO OR FROM THE PROJECT SITE.
9. THE CONTRACTOR SHALL COMPLETE DRAINAGE FACILITIES WITHIN 30 DAYS FOLLOWING COMPLETION OF ROUGH GRADING AT ANY POINT WITHIN THE PROJECT. THE INSTALLATION OF DRAINAGE FACILITIES SHALL TAKE PRECEDENCE OVER ALL UNDERGROUND UTILITIES. OUTFALL DITCHES FROM DRAINAGE STRUCTURES SHALL BE STABILIZED IMMEDIATELY AFTER CONSTRUCTION OF SAME. THIS INCLUDES INSTALLATION OF EROSION CONTROL STONE OR PAVED DITCHES WHERE REQUIRED. ANY DRAINAGE OUTFALLS REQUIRED FOR A STREET MUST BE COMPLETED BEFORE STREET GRADING OR UTILITY INSTALLATION BEGINS.
10. PERMANENT OR TEMPORARY SOIL STABILIZATION MUST BE APPLIED TO ALL DENUEDED AREAS WITHIN 7 DAYS AFTER FINAL GRADE IS REACHED ON ANY PORTION OF THE SITE. SOIL STABILIZATION MUST ALSO BE APPLIED TO DENUEDED AREAS WHICH MAY BE AT FINAL GRADE BUT WILL REMAIN DORMANT (UNDISTURBED) FOR LONGER THAN 30 DAYS. SOIL STABILIZATION MEASURES INCLUDE VEGETATIVE ESTABLISHMENT, MULCHING AND THE EARLY APPLICATION OF GRAVEL BASE MATERIAL ON AREAS TO BE PAVED.
11. NO MORE THAN 300 FEET OF SANITARY SEWER, STORM SEWER, WATERLINES, OR UNDERGROUND UTILITY LINES ARE TO BE OPEN AT ONE TIME. FOLLOWING INSTALLATION OF ANY PORTION OF THESE ITEMS, ALL DISTURBED AREAS ARE TO BE IMMEDIATELY STABILIZED (I.E., THE SAME DAY).
12. IF DISTURBED AREA STABILIZATION IS TO BE ACCOMPLISHED DURING THE MONTHS OF DECEMBER, JANUARY, OR FEBRUARY, STABILIZATION SHALL CONSIST OF MULCHING IN ACCORDANCE WITH SPECIFICATION 3.35. SEEDING WILL THEN TAKE PLACE AS SOON AS THE SEASON PERMITS.
13. THE TERM SEEDING, FINAL VEGETATIVE COVER OR STABILIZATION, ON THIS PLAN SHALL MEAN THE SUCCESSFUL GERMINATION AND ESTABLISHMENT OF A STABLE GRASS COVER FROM A PROPERLY PREPARED SEEDBED CONTAINING THE SPECIFIED AMOUNTS OF SEED, LIME, AND FERTILIZER IN ACCORDANCE WITH SPECIFICATION 3.32. PERMANENT SEEDING, IRRIGATION SHALL BE REQUIRED AS NECESSARY TO ENSURE ESTABLISHMENT OF GRASS COVER.
14. ALL SLOPES STEEPER THAN 3:1 SHALL REQUIRE THE USE OF EROSION CONTROL BLANKETS TO AID IN THE ESTABLISHMENT OF A VEGETATIVE COVER. INSTALLATION SHALL BE IN ACCORDANCE WITH SPECIFICATION 3.35, MULCHING AND MANUFACTURER'S INSTRUCTIONS. NO SLOPES SHALL BE CREATED STEEPER THAN 2:1.
15. INLET PROTECTION IN ACCORDANCE WITH SPECIFICATION 3.07 SHALL BE PROVIDED FOR ALL STORM DRAIN INLETS AS SOON AS PRACTICAL FOLLOWING CONSTRUCTION OF SAME.
16. TEMPORARY LINERS, SUCH AS POLYETHYLENE SHEETS, SHALL BE PROVIDED FOR ALL PAVED DITCHES UNTIL THE PERMANENT CONCRETE LINER IS INSTALLED.
17. PAVED DITCHES SHALL BE REQUIRED WHEREVER EROSION IS EVIDENT. PARTICULAR ATTENTION SHALL BE PAID TO THOSE AREAS WHERE GRADES EXCEED 3 PERCENT.
18. TEMPORARY EROSION CONTROL MEASURES SUCH AS SILT FENCE ARE NOT TO BE REMOVED UNTIL ALL DISTURBED AREAS ARE STABILIZED. AFTER STABILIZATION IS COMPLETE, MEASURES SHALL BE REMOVED WITHIN 30 DAYS. TRAPPED SEDIMENT SHALL BE SPREAD AND SEED.
19. ALL SEDIMENT TRAPS AND BASINS SHALL REMAIN IN PLACE UNTIL THE MAJORITY OF THE SINGLE-FAMILY HOUSE HAS BEEN CONSTRUCTED AND SHALL NOT BE REMOVED WITHOUT AUTHORIZATION FROM THE JAMES CITY COUNTY ENVIRONMENTAL DIVISION.
20. AS-BUILT DRAWINGS MUST BE PROVIDED FOR ALL DETENTION/BMP FACILITIES. ALSO UPON COMPLETION, THE CONSTRUCTION OF ALL DETENTION/BMP FACILITIES SHALL BE CERTIFIED BY A PROFESSIONAL ENGINEER WHO INSPECTED THE STRUCTURE DURING CONSTRUCTION. THE CERTIFICATION SHALL STATE THAT THE BEST OF HIS/HER JUDGMENT, KNOWLEDGE, AND BELIEF, THE STRUCTURE WAS CONSTRUCTED IN ACCORDANCE WITH APPROVAL PLANS AND SPECIFICATIONS.

GENERAL NOTES

1. THE CONTRACTOR SHALL COMPLY WITH CURRENT COUNTY AND/OR VDOT STANDARDS AND SPECIFICATIONS UNLESS OTHERWISE SPECIFIED.
2. THE CONTRACTOR SHALL SECURE THE LATEST EDITION OF THE VIRGINIA EROSION AND SEDIMENT CONTROL HANDBOOK AND COMPLY WITH ALL COUNTY REQUIREMENTS FOR EROSION AND SEDIMENT CONTROL.
3. THE CONTRACTOR SHALL REMOVE ALL CUTS, VEGETATION AND DELETERIOUS MATERIAL ENCOUNTERED AND DISPOSE OF OFF SITE.
4. THE CONTRACTOR SHALL OBTAIN AT HIS OWN EXPENSE, ANY PERMIT OR BOND IF REQUIRED BY ANY GOVERNMENT AGENCY.
5. THE CONTRACTOR SHALL BE RESPONSIBLE FOR LOCATING, PROTECTING, AND RESOLVING ANY CONFLICTS WITH EXISTING UTILITIES AND SHALL REPAIR OR RELOCATE, AT HIS OWN EXPENSE, ALL UTILITIES DAMAGED OR CONFLICTING WITH THESE IMPROVEMENTS.
6. THE CONTRACTOR SHALL REPORT ANY ERRORS OR DISCREPANCIES BEFORE PROCEEDING WITH THE WORK.
7. DENATURING OR EXCAVATION, IF NEEDED, IS PART OF THIS CONTRACT.
8. THE CONTRACTOR SHALL CONTACT "MISS UTILITY" OF VIRGINIA 1-800-552-1001 PRIOR TO ANY LAND DISTURBING ACTIVITIES.
9. CONTRACTOR SHALL OBTAIN PERMITS FROM THE STATE HIGHWAY DEPARTMENT PRIOR TO ANY WORK IN THE STATE'S RIGHT-OF-WAY. THE CONTRACTOR SHALL RESTORE AND CLEAN UP THE SITE TO THE SATISFACTION OF THE HIGHWAY DEPARTMENT.

PROJECT DESCRIPTION

The project consists of installation of perimeter drainage structures at the James Fort and the Indian Village and construction of a pond/wetland system BMP at the James Settlement located in James City County. The project site is adjacent to the Colonial National Historic Parkway and Route 31. The facility consists of approximately 24 acres and utilizes approximately 7 additional acres of Virginia Department of Transportation (VDOT) property for a total of 31 acres of partially developed, yet wooded land. A vicinity map depicting the approximate location of the project is provided as FIGURE 1 of this plan.

EXISTING SITE CONDITIONS

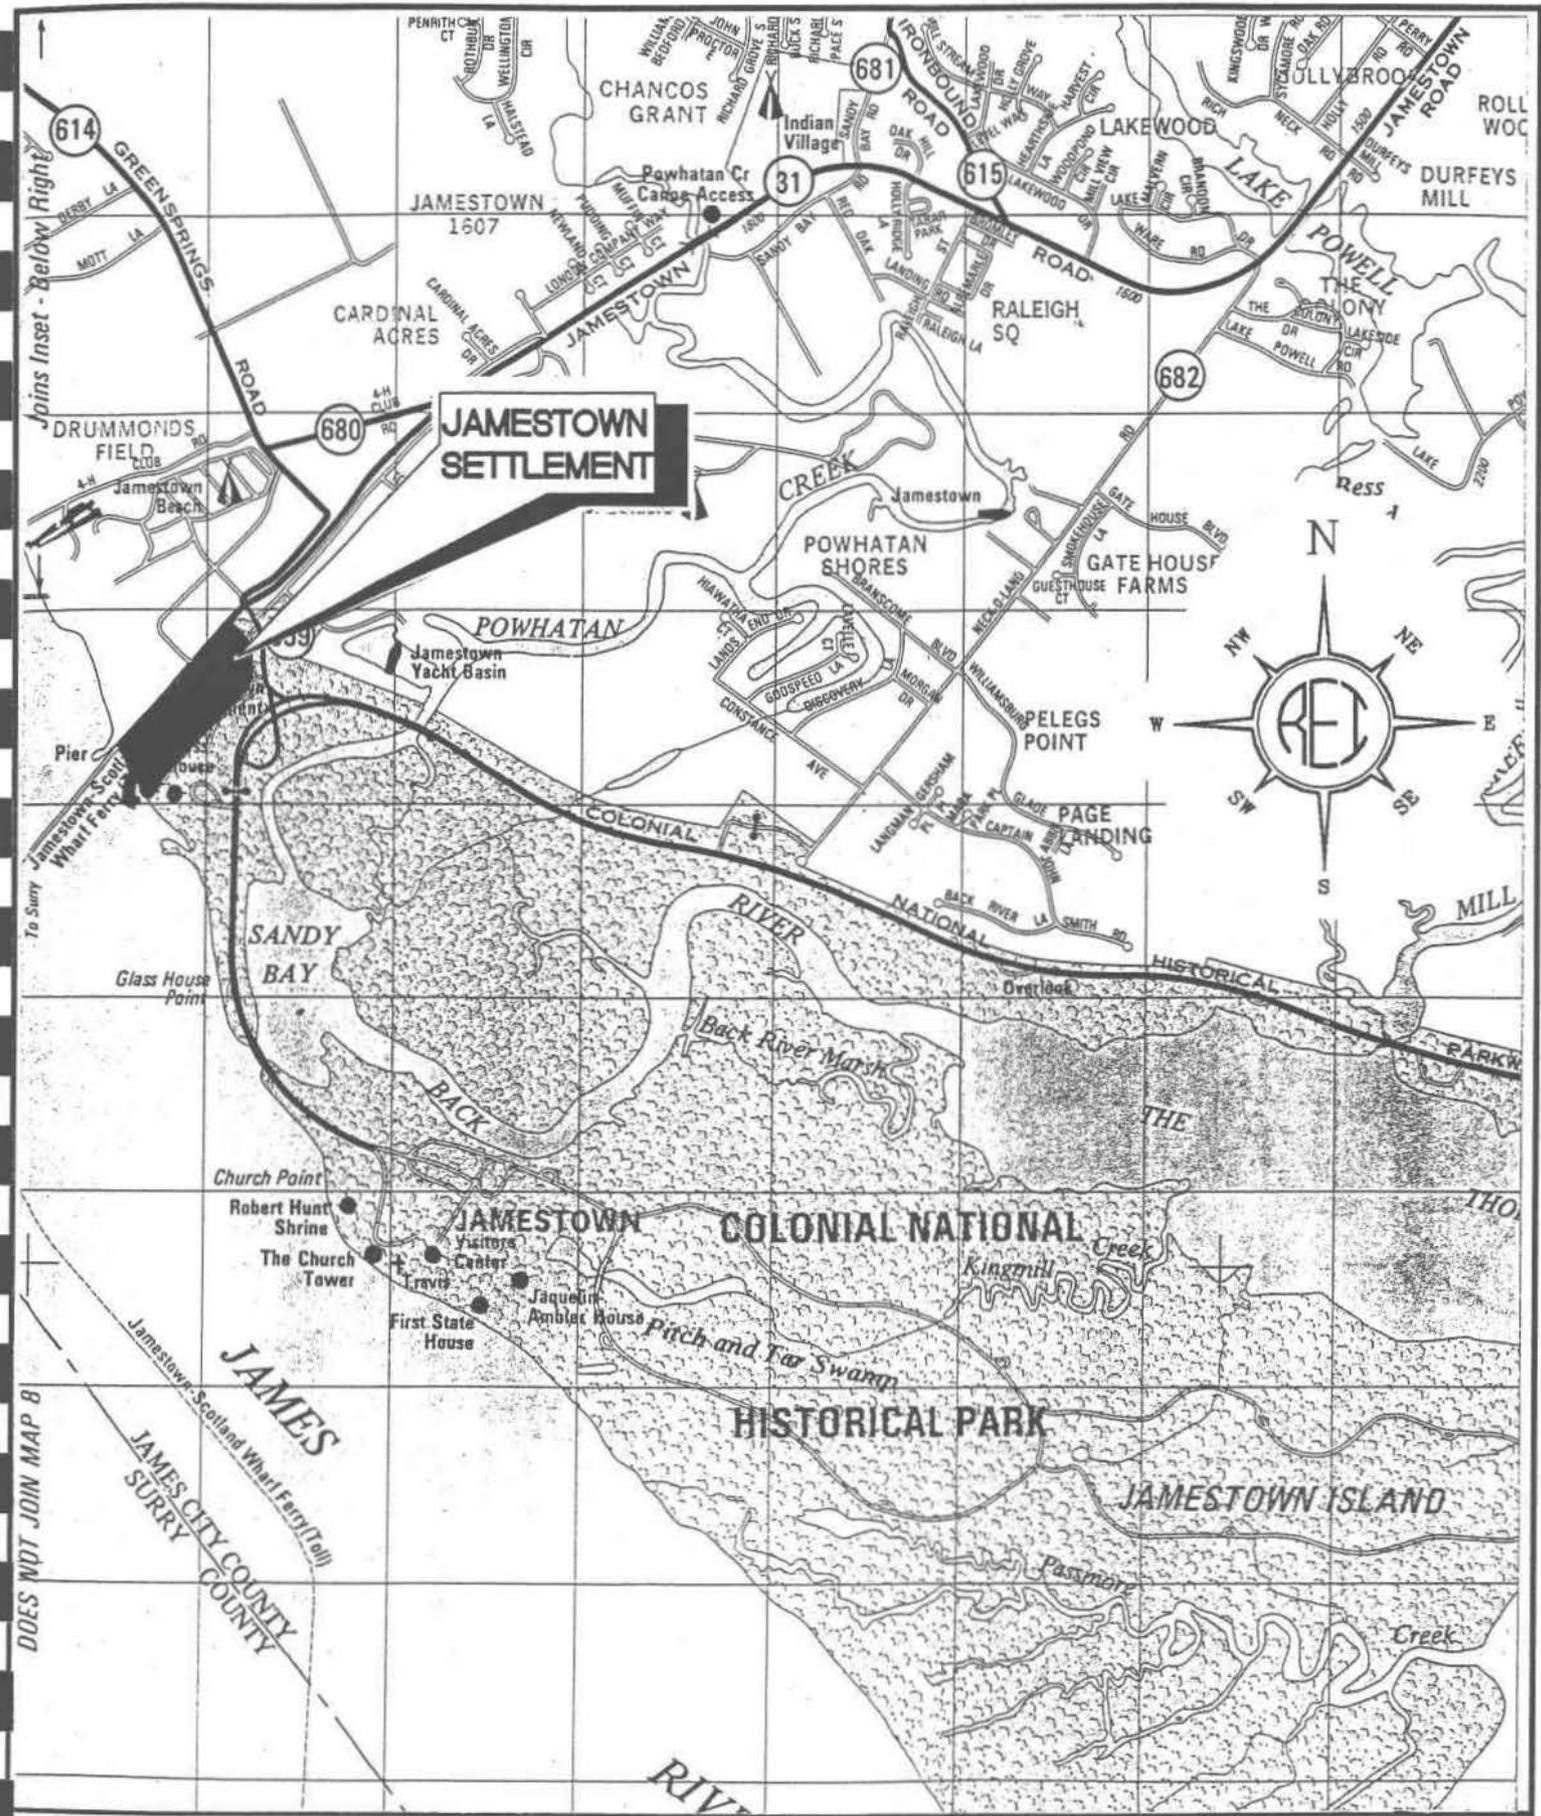

The study area consists of approximately 23.9 acres containing six buildings, an Indian Village, the James Fort, wooded areas, and grassy areas. The facilities topography is relatively flat around the four main buildings and the Fort (Elevation 15) and slopes to the James River at approximately 4 percent.

ADJACENT AREAS

The site is bounded on the west by the James River, on the north by Jamestown Road (Route 31), on the east by vacant land, and on the south by the Colonial National Historic Parkway.

OFF-SITE AREAS

Off-site disturbances include a portion of the perimeter drainage system associated with the Indian Village, construction of a boardwalk, and the timber wall BMP with wet pond which are all located on the Jamestown Road (S.R. #31) right-of-way. Erosion and sediment control measures for these off-site disturbances are provided on the plans.

JAMESTOWN SETTLEMENT
 VICINITY MAP

PROJ. NO.: 00175
DWG: FIGURE 1
DATE: 02.14.01
SCALE: 1"=2000'
SHEET 1 OF 1

SOILS

According to the "Soil Survey of James City and York Counties and the City of Williamsburg, Virginia" (1985), the facility is located within five classifications of soils. The five soils are Emporia fine sandy loam (14C), Emporia complex (15D), Pamunkey soils (26B), Tetotum silt loam (32), and Udorthents (35).

Emporia Fine Sandy Loam (14C)

Emporia fine sandy loam soil is deep, strongly sloping, and well drained.

Typically, the surface layer of this soil is dark grayish brown fine sandy loam about 4 inches thick. The subsurface layer is pale brown loam 9 inches thick. The subsoil extends to a depth of 58 inches. It is yellowish brown loam with mostly strong brown mottles in the upper part; yellowish brown, firm sandy clay loam with strong brown and gray mottles in the middle part; and mottled gray and brown, firm sandy clay loam in the lower part. The substratum to a depth of at least 75 inches is variegated gray, brown, and red, firm sandy clay loam.

In this Emporia soil, permeability is moderate in the upper part of the subsoil and moderately slow in the lower part. The erosion hazard is severe.

Emporia Complex (15D)

Emporia complex consists of areas of deep, moderately steep, well-drained Emporia soils and areas of similar soils that formed over layers of fossil shells.

Typically, the surface layer of Emporia soils is dark grayish brown fine sandy loam about 4 inches thick. The subsurface layer is pale brown loam 7 inches thick. The subsoil extends to a depth of 54 inches. It is yellowish brown loam with mostly strong brown mottles in the upper part; yellowish brown, firm sandy clay loam with strong brown and gray mottles in the middle part; and mottled gray and brown, firm sandy clay loam in the lower part. The substratum is variegated brown, red, and gray, firm sandy clay loam to a depth of at least 75 inches.

In these Emporia soils, permeability is moderate in the upper part of the subsoil and moderately slow in the lower part. The erosion hazard is severe.

Pamunkey Soils (26B)

Pamunkey soils are deep, gently sloping, and well drained.

The texture of the surface layer of these soils is highly variable throughout the survey areas. Typically, the surface layer of the Pamunkey soils is dark grayish brown sandy loam about 4 inches thick. The subsurface layer is brown sandy loam 10 inches thick. The subsoil extends to a depth of 43 inches. It is mostly yellowish brown sandy loam and dark brown sandy clay loam. The substratum is mostly brown and strong brown loamy sand and sand to a depth of at least 75 inches.

The permeability of these Pamunkey soils is moderate, and the erosion hazard is moderate.

Tetotum Silt Loam (32)

Tetotum silt loam soil is deep, nearly level, and moderately well drained.

Typically, the surface layer of this soil is dark grayish brown silt loam about 5 inches thick. The subsurface is mostly yellowish brown silt loam, silty clay loam, clay loam, and loam 41 inches thick. It has gray mottles at a depth of more than 27 inches. The substratum is mottled yellowish brown, gray, and strong brown fine sandy loam to a depth of at least 65 inches.

The permeability of this Tetotum soil is moderate, and the erosion hazard is slight.

Udorthents (35)

Udorthents consist of deep, well-drained and moderately well drained loamy soil material in areas where the soils have been disturbed during excavation and grading. The permeability ranges from moderately rapid to slow and the erosion hazard ranges from slight to severe.

CRITICAL EROSION AREAS

The critical erosion areas associated with this site are considered to be the two wetland pockets and the downstream receiving channels. To prevent sediment from entering these areas, it is imperative that the contractor installs all control measures shown on these plans before any land disturbing activities commence. Regular inspection and maintenance is also required for all erosion and sediment control measures to keep them functioning as designed.

EROSION AND SEDIMENT CONTROL MEASURES

Unless otherwise indicated, all structural and vegetative erosion and sediment control practices shall be constructed and maintained according to minimum standards and specifications of the latest edition of the Virginia Erosion and Sediment Control Handbook (VESCH). The minimum standards shall be adhered to unless otherwise waived or approved by a variance.

STRUCTURAL PRACTICES

Temporary Stone Construction Entrance – 3.02

Temporary stone construction entrances shall be provided at points of vehicular ingress and egress as depicted on the plans.

Silt Fence – 3.05

Silt fence shall be installed along the perimeter of the site as depicted on the plans.

Storm Drain Inlet Protection – 3.07

Storm drain inlet protection shall be provided around existing storm drain drop inlets as depicted on the plans.

Culvert Inlet Protection – 3.08

Culvert inlet protection shall be installed at the inlet to storm sewer culverts as depicted on the plans.

Check Dam – 3.20

Check dams shall be installed as depicted on the plans.

Tree Preservation and Protection – 3.38

Tree preservation and protection shall be provided for the protection of desirable trees from mechanical and other injury during land disturbing and construction activity. These devices shall be installed at the locations indicated on the plans.

VEGETATIVE PRACTICES

Temporary Seeding – 3.31

All denuded areas, which will be left dormant for extended periods of time, shall be seeded with fast germinating temporary vegetation immediately following grading. Selection of the seed mixture will depend on the time of year it is applied.

MANAGEMENT STRATEGIES

- Construction will be sequenced so that grading operations can begin and end as quickly as possible.
- Areas that are not to be disturbed will be clearly marked by survey flagging.
- Sediment trapping measures will be installed as the first step in grading and will be seeded and mulched immediately following installation.

- Temporary seeding or other stabilization will follow immediately after grading.
- The contractor shall be responsible for the installation and maintenance of all erosion and sediment control practices depicted on the plans.
- After achieving adequate stabilization, the temporary controls will be cleaned and removed. Any areas disturbed in the removal process shall be graded, topsoiled, and seeded accordingly.

PERMANENT STABILIZATION

All areas disturbed by construction shall be stabilized with permanent seeding immediately following finish grading. Seeding shall be done with Kentucky 31 Tall Fescue according to Std. And Spec. 3.32, PERMANENT SEEDING, of the handbook. Erosion control blankets will be installed over fill slopes which have been brought to final grade and have been seeded to protect the slopes from rill and gully erosion and to allow seed to germinate properly. Mulch (straw or fiber) will be used on relatively flat areas. In all seeding operations, seed, fertilizer and lime will be applied prior to mulching.

STORMWATER MANAGEMENT

James City County's 10-Point Best Management Practice (BMP) requirements for compliance with the Chesapeake Bay Preservation Act would be satisfied by the combined use of conservation areas and one wetland water quality BMP. A total of 4.99 acres of the 23.9-acre study area are proposed to be preserved as conservation areas. A pond/wetland system BMP (B-3) is proposed to be constructed in DA-2 to receive and treat stormwater runoff from DA-1, 2, and 3. This pond/wetland system BMP would contain a storage volume of 36,000 cubic feet. The combination of conservation areas and structural BMP provide 10.03 points as calculated according to the James City County BMP worksheet provided in APPENDIX E of the Jamestown Settlement Stormwater Management Master Plan for the Jamestown-Yorktown Foundation.

MAINTENANCE

In general, all erosion and sediment control measures will be checked daily and after each significant rainfall. The following items will be checked in particular:

Temporary Stone Construction Entrance – 3.02

The entrance shall be maintained in a condition, which will prevent tracking or flow of mud onto public rights-of-way. This may require periodic top dressing with additional stone or the washing and reworking of existing stone as conditions demand and repair and/or cleanout of any structures used to trap sediment. All materials spilled, dropped, washed, or tracked from vehicles onto roadways or into storm drains must be removed immediately. The use of water trucks to remove materials dropped, washed, or tracked onto roadways will not be permitted under any circumstances.

Silt Fence – 3.05

Silt fences shall be inspected immediately after each rainfall and at least daily during prolonged rainfall. Any required repairs shall be made immediately.

Close attention shall be paid to the repair of damaged silt fence resulting from end runs and undercutting.

Should the fabric on a silt fence decompose or become ineffective prior to the end of the expected usable life and the barrier still is necessary, the fabric shall be replaced promptly.

Sediment deposits should be removed after each storm event. They must be removed when deposits reach approximately one-half the height of the barrier.

Any sediment deposits remaining in place after the silt fence is no longer required should be dressed to conform to the existing grade, prepared and seeded.

Storm Drain Inlet Protection – 3.07

The structure shall be inspected after each rain and repairs made as needed.

Sediment shall be removed and the trap restored to its original dimensions when the sediment has accumulated to one-half the design depth of the trap. Removed sediment shall be deposited in a suitable area and in such a manner that it will not erode.

Structures shall be removed and the area stabilized when the remaining drainage area has been properly stabilized.

Culvert Inlet Protection – 3.08

The structure shall be inspected after each rain and repairs made as needed.

Aggregate shall be replaced or cleaned when inspection reveals that clogged voids are causing ponding problems, which interfere with on-site construction.

Sediment shall be removed and the impoundment restored to its original dimensions when sediment has accumulated to one-half the design depth. Removed sediment shall be deposited in a suitable area and in such a manner that it will not erode and cause sedimentation problems.

Temporary structures shall be removed when they have served their useful purpose but not before the upslope area has been permanently stabilized.

Check Dam – 3.20

Check dams should be checked for sediment accumulation after each runoff-production storm event. Sediment should be removed when it reaches one-half of the original height of the measure.

Regular inspections should be made to ensure that the center of the dam is lower than the edges. Erosion caused by high flows around the edges of the dam should be corrected immediately.

Temporary Seeding – 3.31

The seeded/mulched areas should be checked regularly to ensure that a good stand is established and maintained. Areas should be fertilized, mulched and re-seeded as needed. When it is clear that plants have not germinated on an area or have died, these areas must be re-seeded immediately to prevent erosion damage. However, it is extremely important to determine for what reason germination did not take place and make any corrective action necessary prior to re-seeding the area.

Tree Protection - 3.38

In spite of precautions, some damage to protected trees may occur. In such cases, the following maintenance guidelines should be followed:

Soil Aeration

If the soil has become compacted over the root zone of any tree, the ground shall be aerated by punching holes with an iron bar. The bar shall be driven 1 foot deep and then moved back and forth until the soil is loosened. This procedure shall be repeated every 18 inches until all of the compacted soil beneath the crown of the tree has been loosened.

Repair of Damage

- Any damage to the crown, trunk, or root system of any tree retained on the site shall be repaired immediately.
- Whenever major root or bark damage occurs, remove some foliage to reduce the demand for water and nutrients.

- Damaged roots shall immediately be cut off cleanly inside the exposed or damaged area. Cut surfaces shall be painted with approved tree paint, and moist peat moss, burlap, or topsoil shall be spread over the exposed area.
- To treat bark damage, carefully cut away all loosened bark back into the undamaged area, taper the cut at the top and bottom, and provide drainage at the base of the wound.
- All tree limbs damaged during construction or removed for any other reason shall be cut off above the collar at the preceding branch junction.
- Care for serious injuries shall be prescribed by a forester or a tree specialist.

Fertilization

Broadleaf trees that have been stressed or damaged shall receive a heavy application of fertilizer to aid their recovery.

- Trees shall be fertilized in the late fall (after October 1) or the early spring (from the time frost is out of the ground until May 1). Fall applications are preferred, as the nutrients will be made available over a longer period of time.
- Fertilizer shall be applied to the soil over the feeder roots. In no case should it be applied closer than 3 feet to the trunk.
- The root system of conifers extends some distance beyond the drip line. Increase the area to be fertilized by one-fourth the area of the crown.
- Fertilizer shall be applied using approved fertilization methods and equipment.
- Formulations and application rates shall conform to the guidelines given in VESCH.
- Maintain a ground cover of organic mulch around trees that is adequate to prevent erosion, protect roots, and hold water.

CALCULATIONS

The Chesapeake Bay Preservation Act (CBPA) and stormwater management calculations pertain to the proposed perimeter drainage improvements and pond/wetland system BMP associated with the Fort James and the Indian Village. The calculations are divided into three sections. Appendix B contains calculations to support the design of the perimeter drainage improvements for the James Fort, and Appendix C contains information pertaining to the Indian Village. Appendix D contains the design calculations for the pond/wetland system BMP.

The James Fort perimeter drainage improvements consist of a historically accurate perimeter ditch with drain channels along the bottom of the ditch to convey the stormwater runoff to the Indian River perimeter drainage system and directly to the James River.

The Indian Village drainage improvements consist of perimeter drainage basins to convey the stormwater runoff from the village and the James Fort to the proposed pond/wetland system BMP for treatment before it is discharged to the James River.

The BMP uses existing wetlands in conjunction with an excavated wet pond upstream of the wetlands and a timber wall dam constructed downstream of the wetlands to create a pond/wetland system. The BMP also meets the James City County stream channel protection requirement of providing for 24-hour detention of the runoff generated by the 1-year, 24-hour duration storm event. The 10-year storm post-development storm of 67.36 cfs is released at a peak rate of 46.70 cfs, which is less than the pre-development rate of 47.18 cfs.

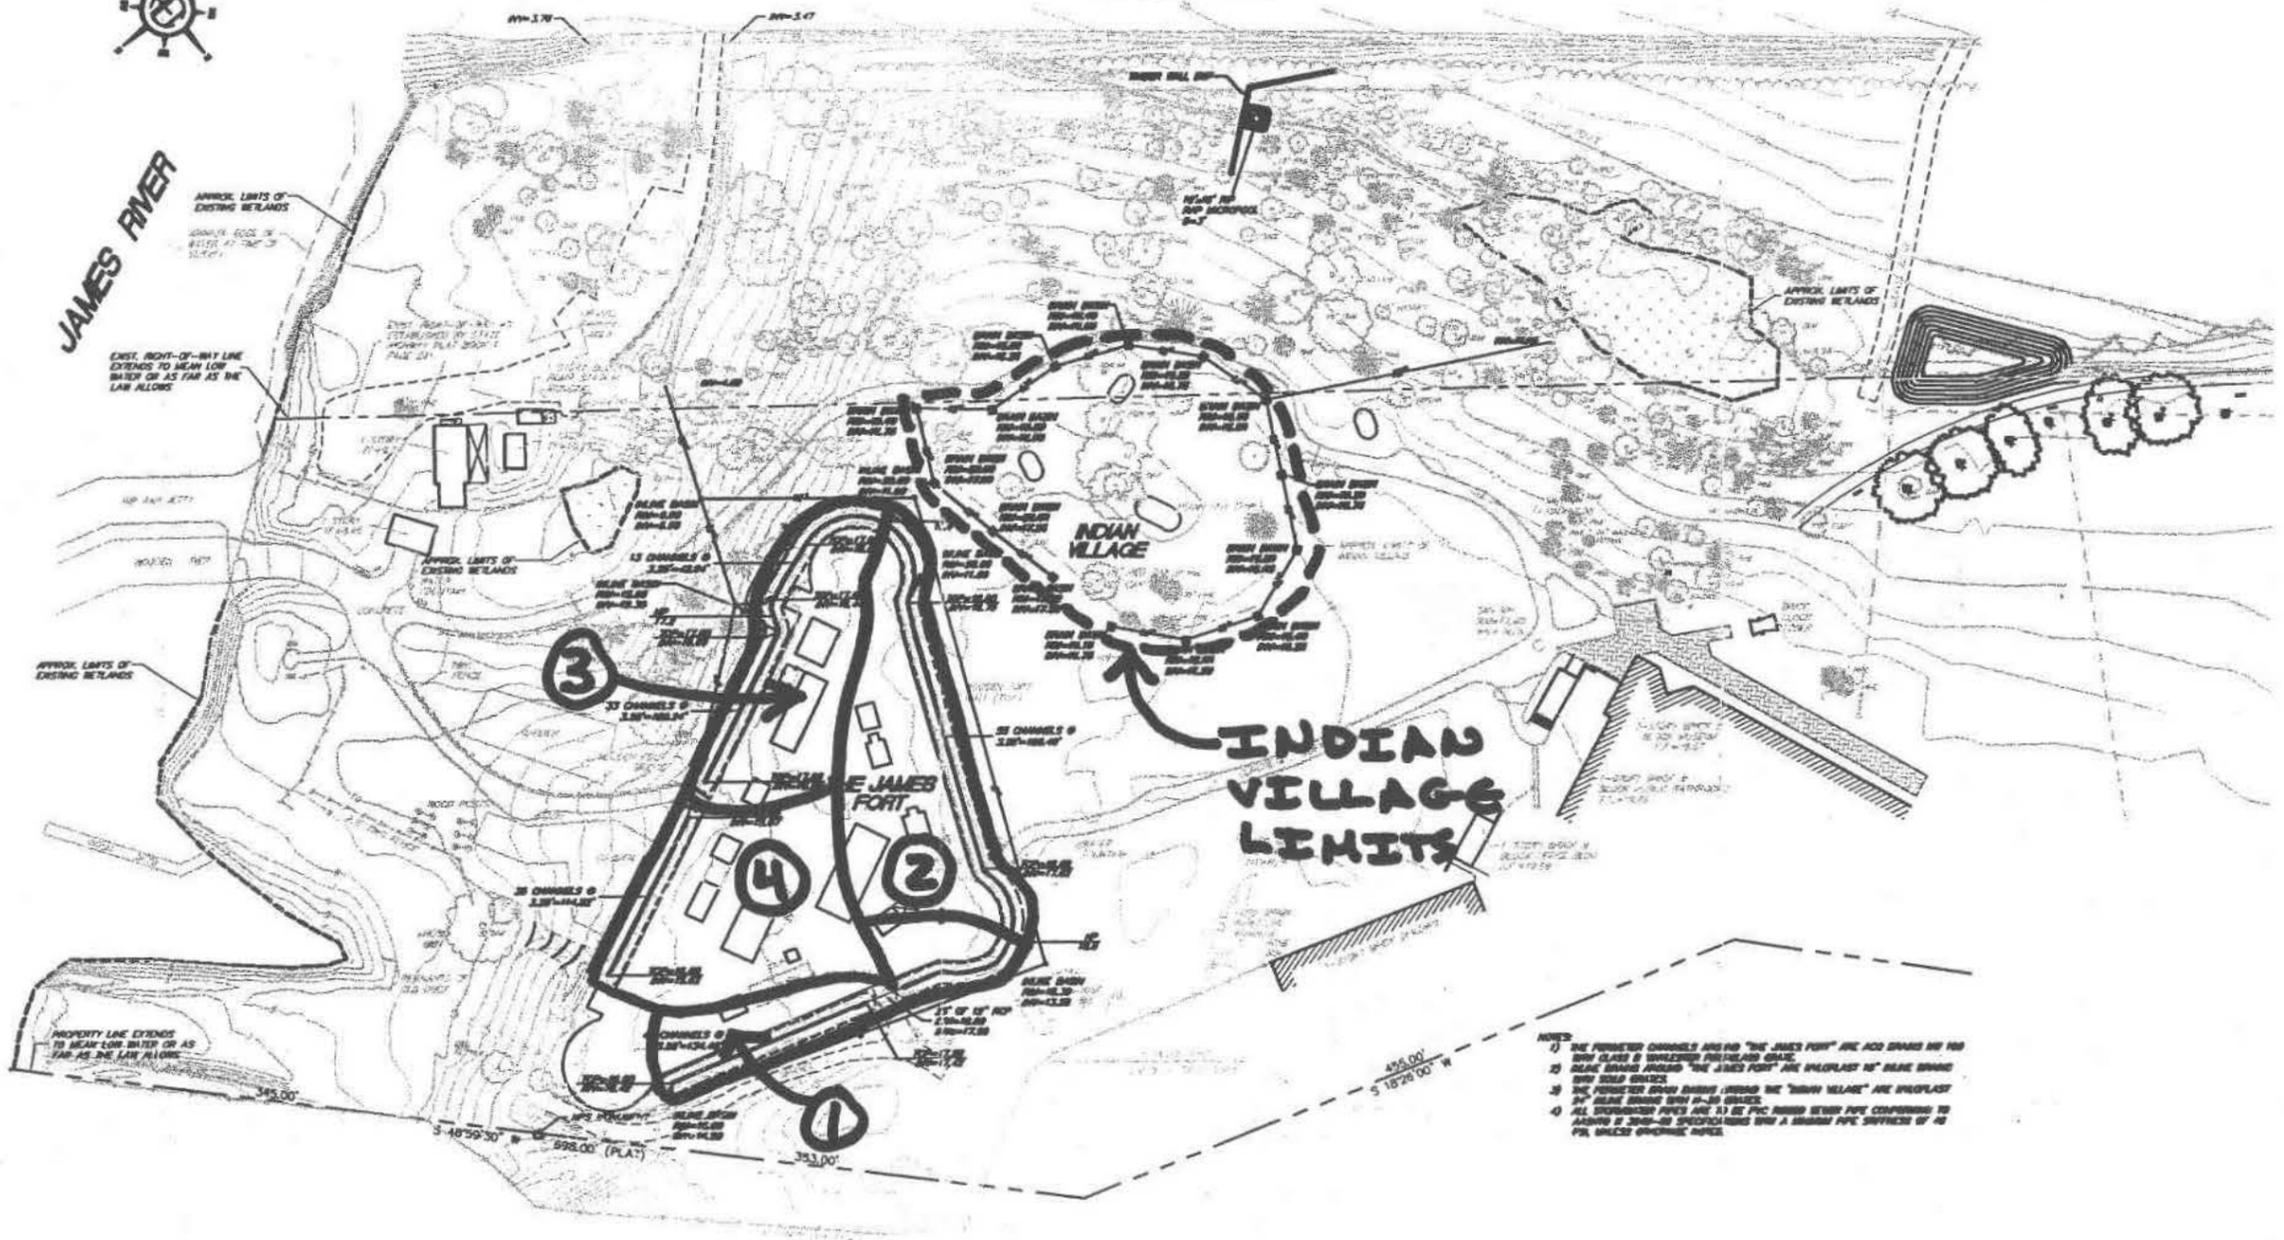

The appropriate calculations associated with this project are located in Appendices B, C and D.

APPENDIX A

===== HYDROLOGIC SUMMARY =====
 ===== Volumes, Losses, and Discharges =====

SCS TYPE II Hyetograph.
 SCS DIMENSIONLESS UNIT HYDROGRAPH was used.
 APPLIED RAINFALL DEPTH (inches): 6.00

		VOLUME OF RAINFALL APPLIED (ac-ft)	VOLUME OF RUNOFF (ac-ft)	RAINFALL LOSSES (percent)	PEAK DISCHARGE (cfs)	PEAK DISCHARGE (cfs/ac)
SUBAREA	1	8.4160	6.3248	24.85	68.927	4.095
TOTAL WATERSHED		8.4160	6.3248	24.85	68.927	4.095

TOTAL WATERSHED AREA (square miles): .0263
 TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED (ac-ft): 6.3248
 COMPOSITE WATERSHED CURVE NUMBER: 87.00
 MINIMUM SUBAREA TIME OF CONCENTRATION: .400 hours.

NOTE: "VOLUME OF RUNOFF" includes surface runoff only; baseflows are not included in this summation. The "TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED" includes all baseflows.

===== PROGRAM EXECUTION =====

NUMBER OF STORMS TO BE MODELED : 1
 NUMBER OF CHANNELS : 0
 NUMBER OF SUBAREAS : 1
 UPSTREAM HYDROGRAPHS ENTER AT : 0 LOCATIONS
 NUMBER OF TIME STEPS : 300
 COMPUTATIONAL TIME INCREMENT : .100 Hours

NOTE: The DURATION of the final computed hydrograph(s) for this watershed system will be 30.000 hours.

===== UNIT HYDROGRAPH METHODOLOGY =====

The SCS DIMENSIONLESS UNIT HYDROGRAPH is used in all runoff computations. The peak rate factor (PRF) for all unit hydrographs is 484 (U.S. Customary units) or 2.08356 (Metric units).

RETURN PERIOD (yrs): 100

===== HYDROLOGIC SUMMARY =====
 ===== Volumes, Losses, and Discharges =====

SCS TYPE II Hyetograph.
 SCS DIMENSIONLESS UNIT HYDROGRAPH was used.
 APPLIED RAINFALL DEPTH (inches): 8.00

		VOLUME OF RAINFALL APPLIED (ac-ft)	VOLUME OF RUNOFF (ac-ft)	RAINFALL LOSSES (percent)	PEAK DISCHARGE (cfs)	PEAK DISCHARGE (cfs/ac)
SUBAREA	1	11.221	9.0307	19.52	97.012	5.764
TOTAL WATERSHED		11.221	9.0307	19.52	97.012	5.764

TOTAL WATERSHED AREA (square miles): .0263
 TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED (ac-ft): 9.0307
 COMPOSITE WATERSHED CURVE NUMBER: 87.00
 MINIMUM SUBAREA TIME OF CONCENTRATION: .400 hours.

NOTE: "VOLUME OF RUNOFF" includes surface runoff only; baseflows are not included in this summation. The "TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED" includes all baseflows.

JOB 00175-020
 SHEET NO. _____ OF _____
 CALCULATED BY KMS DATE 8/9/01
 CHECKED BY _____ DATE _____
 SCALE _____

Compute Stream Channel Protection Volume (cpv):

Step 1. Develop site hydrologic & TR-55 Input Parameters

Condition	CN	T _c	Q _a , 1-YR ST	Q 1-YR	Q 10-YR
		hrs	inches	cfs	cfs
PRE-DEVELOP.	74	.40	0.8	10.40	24.92
DEVELOPED	87	.40	1.6	48.25	70.09

Step 2. Utilize MOE Method to compute Storage Volume

Initial Abstraction (I_a) for CN of 87 is 0.299

$$I_a/P = 0.299/2.8 = .11$$

$$T_c = 0.40 \text{ hrs}$$

From TR-55, Exhibit 4-II

$$g_u = 590 \text{ cm/in}$$

$$Q_o/Q_i = 0.031$$

From TR-55, Figure 6.1

For Type II Rainfall Distribution,

$$V_s/V_r = 0.683 - 1.43(Q_o/Q_i) + 1.64(Q_o/Q_i)^2 - 0.804(Q_o/Q_i)^3$$

$$V_s/V_r = 0.683 - 1.43(.031) + 1.64(.031)^2 - 0.804(.031)^3$$

$$V_s/V_r = 0.683 - 0.044 + .002 - 0$$

$$V_s/V_r = 0.64$$

$$V_s = 0.64(1.6)(1/12)(16.84 \text{ ac}) = 1.44 \text{ ac-ft}$$

Step 3. Define the average ED Release Rate

$$Q_i = 48.25 \text{ cfs}$$

$$Q_o = (Q_o/Q_i) Q_i = .031(48.25) = 1.5 \text{ cfs}$$

USE EXISTING DITCH UPLANDS
OF BMP B-1 AS FOREBAY

- Drainage Area to Forebay = 8.23 ac.
- Impervious Area @ Buildout = $(8.23 \text{ ac})(0.60) = 4.94 \text{ ac}$
- Forebay Volume Required =

0.1 in	4.94 ac	43,560 sq ft	1 ft
		1 ac	12 in

= 1800 cf

- Determine Forebay Volume:

DITCH/FOREBAY CROSS-SECTION

- Forebay Cross-Section Area = 20 ft²
- Forebay Length = 425 ft
- Forebay Volume = 8500 ft³

Conclusion: Existing ditch upland of BMP B-1 has adequate storage to act as forebay

 Input: JSFP10.IN
 Output: JSFP10.OUT

===== PROGRAM EXECUTION =====

NUMBER OF STORMS TO BE MODELED : 1
 NUMBER OF CHANNELS : 0
 NUMBER OF SUBAREAS : 1
 UPSTREAM HYDROGRAPHS ENTER AT : 0 LOCATIONS
 NUMBER OF TIME STEPS : 300
 COMPUTATIONAL TIME INCREMENT : .100 Hours

NOTE: The DURATION of the final computed hydrograph(s) for this watershed system will be 30.000 hours.

===== UNIT HYDROGRAPH METHODOLOGY =====

The SCS DIMENSIONLESS UNIT HYDROGRAPH is used in all runoff computations. The peak rate factor (PRF) for all unit hydrographs is 484 (U.S. Customary units) or 2.08356 (Metric units).

===== SUBAREA DATA =====

SUBAREA ID NO	AREA (mi2)	TIME OF CONCENTRATION (hrs)	CURVE NUMBER	BASEFLOW (cfs)	DOWNSTREAM CHANNELS
1	.0131	.400	88.00	.0	

Composite Watershed Curve Number = 88.00
 Minimum Subarea Time of Concentration = .400 hours.

===== HYDROLOGIC SUMMARY =====
 ===== Volumes, Losses, and Discharges =====

SCS TYPE II Hyetograph.
 SCS DIMENSIONLESS UNIT HYDROGRAPH was used.
 APPLIED RAINFALL DEPTH (inches): 6.00

		VOLUME OF RAINFALL APPLIED (ac-ft)	VOLUME OF RUNOFF (ac-ft)	RAINFALL LOSSES (percent)	PEAK DISCHARGE (cfs)	PEAK DISCHARGE (cfs/ac)
SUBAREA	1	4.1920	3.2262	23.04	35.009	4.176
TOTAL WATERSHED		4.1920	3.2262	23.04	35.009	4.176

TOTAL WATERSHED AREA (square miles): .0131
 TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED (ac-ft): 3.2262
 COMPOSITE WATERSHED CURVE NUMBER: 88.00
 MINIMUM SUBAREA TIME OF CONCENTRATION: .400 hours.

NOTE: "VOLUME OF RUNOFF" includes surface runoff only; baseflows are not included in this summation. The "TOTAL VOLUME OF DISCHARGE LEAVING WATERSHED" includes all baseflows.

1

Worksheet 2: Runoff curve number and runoff

Project Jamestown Settlement By KMS Date 8/13/01

Location James City County, Va Checked _____ Date _____

Circle one: Present Developed Forebay Pond

1. Runoff curve number (CN)

Soil name and hydrologic group (appendix A)	Cover description (cover type, treatment, and hydrologic condition; percent impervious; unconnected/connected impervious area ratio)	CN ^{1/}			Area <input checked="" type="checkbox"/> Acres <input type="checkbox"/> mi ² <input type="checkbox"/> %	Product of CN x area
		Table 2-2	Fig. 2-3	Fig. 2-4		
Pamunkey B	Roof/Road	98			1.39	136.22
Emporia Tetotow C	Roof/Road	98			3.62	354.76
Emporia Tetotow C	Grass (Good Condition)	74			3.35	247.90
Totals =					8.36	738.88

^{1/} Use only one CN source per line.

$$\text{CN (weighted)} = \frac{\text{total product}}{\text{total area}} = \frac{738.88}{8.36} = 88.4$$

Use CN = 88

2. Runoff

Frequency yr

Rainfall, P (24-hour) in

Runoff, Q in
(Use P and CN with table 2-1, fig. 2-1, or eqs. 2-3 and 2-4.)

Storm #1	Storm #2	Storm #3
2		
3.5		

Worksheet 3: Time of concentration (T_c) or travel time (T_t)

Project James town Settlement By KWT Date 8/13/01

Location JAMES CITY COUNTY, Va. Checked _____ Date _____

Circle one: Present Developed Forebay Pond
 Circle one: T_c T_t through subarea

NOTES: Space for as many as two segments per flow type can be used for each worksheet.

Include a map, schematic, or description of flow segments.

Sheet flow (Applicable to T_c only)

	Segment ID	AB	BC	
1. Surface description (table 3-1)		PAVED	GRASS	
2. Manning's roughness coeff., n (table 3-1) ..		.011	0.15	
3. Flow length, L (total L \leq 300 ft)	ft	110	275	
4. Two-yr 24-hr rainfall, P_2	in	3.5	3.5	
5. Land slope, s	ft/ft	.010	.020	
6. $T_t = \frac{0.007 (nL)^{0.8}}{P_2^{0.5} s^{0.4}}$ Compute T_t	hr	.03	.35	.38

Shallow concentrated flow

	Segment ID			
7. Surface description (paved or unpaved)				
8. Flow length, L	ft			
9. Watercourse slope, s	ft/ft			
10. Average velocity, V (figure 3-1)	ft/s			
11. $T_t = \frac{L}{3600 V}$ Compute T_t	hr			

Channel flow

	Segment ID	CD		
12. Cross sectional flow area, a	ft ²	33.00		
13. Wetted perimeter, p_w	ft	18.42		
14. Hydraulic radius, $r = \frac{a}{p_w}$ Compute r	ft	1.79		
15. Channel slope, s	ft/ft	.010		
16. Manning's roughness coeff., n035		
17. $V = \frac{1.49 r^{2/3} s^{1/2}}{n}$ Compute V	ft/s	6.26		
18. Flow length, L	ft	425		
19. $T_t = \frac{L}{3600 V}$ Compute T_t	hr	.02		.02
20. Watershed or subarea T_c or T_t (add T_t in steps 6, 11, and 19)	hr			0.40

GUIDANCE CALCULATION PROCEDURE

WORKSHEET B: REDEVELOPMENT

1. Compile site-specific data and determine site imperviousness (I_{site}).

	PRE-DEVELOPMENT	POST-DEVELOPMENT
A^*	= 1.09 acres	= 1.09 acres
I_a^{***} structures and asphalt lot	= 0.15 acres	= 0.15 acres
gravel lot (C=0.6)	= _____ acres	= _____ acres
	= _____ acres	= _____ acres
	= _____ acres	= _____ acres
	= _____ acres	= _____ acres
	= _____ acres	= _____ acres
	= _____ acres	= _____ acres
total I_a	= 0.2 acres	= 0.2 acres
$I = (total I_a / A) \times 100$	= 14 (% expressed in whole numbers)	= 14 (% expressed in whole numbers)
$R_v = 0.05 + (0.009 \times I)$	= 0.17 unitless	= 0.17 unitless
C: $I \geq 20 = 1.08 \text{ mg/l}$		
$I < 20 = 0.26 \text{ mg/l}$	= 0.26 mg/l	= 0.26 mg/l

* Although the area subject to regulations may be only the area actually in a CBPA, some localities may require all of the site to comply with criteria.

2. Set Constants.

P_j = unitless rainfall correction factor = 0.9 for all of Tidewater Virginia	P = annual rainfall depth in inches = 40 in. for Northern Virginia area = 43 in. for Richmond Metro. area = 45 in. for Hampton Roads area
--	--

12 and 2.72 are used in the equation as unit conversion factors.

3. Calculate the pre-development load (L_{pre}).

$$L_{pre} = P \times P_j \times R_{v(pre)} \times C_{pre} \times A \times 2.72 / 12$$

$$= \underline{0.45} \text{ pounds per year}$$

4. Calculate the post-development load (L_{post}).

$$L_{post} = P \times P_j \times R_{v(post)} \times C_{post} \times A \times 2.72 / 12$$

$$= \underline{0.45} \text{ pounds per year}$$

5. Calculate the pollutant removal requirement (RR).

$RR = L_{post} - (0.9 \times L_{pre})$ $= \underline{0.05} \text{ pounds per year}$	$\%RR = RR / L_{post} \times 100$ $= \underline{10} \%$
--	--

DESIGN BMP E-2
DRY SWALE

Treatment Volume - 1 inch impervious area

Post-Development Impervious Area = 7.28 ac

$WQ_v = \frac{7.28 \text{ ac}}{12 \text{ in}} \times \frac{1 \text{ ft}}{1 \text{ ac}} \times 43,560 \text{ sf} = 26,500 \text{ cf}$

Jamestown Settlement

8/20/02

- Portion of site existed prior to adoption of Ches Bay

- \therefore redevelopment criteria applies

need to reduce existing pollutant load by 10% below levels existing in 1990 before adoption of Ordin.

$$\text{Area of Site} = 24.0 \text{ acres}$$

$$\text{DAS } 4, 5 + 6 = 23.9 \text{ ac} \approx 24.0$$

$$\text{Existing Imp Area} = 6.36 + 1.23 + 0.45 = 8.04 \text{ ac}$$

$$\text{Max Imp Area} = 9.87 + 2.85 + .45 = 13.17 \text{ ac}$$

$$\text{Buildout} = 43\% \times 24 = 10.32 \text{ ac}$$

$$\text{Open Space Area} - \frac{4.3 \text{ ac} \times .1}{24} = 1.79 \text{ pts}$$

$$\text{Structural Points} - 7.32 \text{ pts}$$

$$\text{Total} = 9.11 \text{ pts}$$

$$\text{Shortfall} = 0.89 \text{ pts}$$

~~Assume - $\frac{1}{2}$ of imp cover existed prior to adoption of Ches Bay~~

~~or 3.18 ac in DA4~~

~~now to be treated in 50% eff. BMP~~

$$\frac{3.18}{6.36} \times 50\% = .25 \text{ or } 25\% \text{ reduction in load}$$

$$25\% \times \frac{14.72}{24} = 15\frac{1}{3}\% \text{ red. in existing load}$$

Consider 3.2 ac as offsite area - ex. imp. cover estimate

new site area = 20.8 ac

$$\left(\frac{14.7 - 3.2}{20.8} \times 10 \right) + \left(\frac{3.2}{20.8} \times 10 \right) + \left(\frac{4.75}{20.8} \times 6 \right) + \frac{4.3}{20.8} \times 10 =$$

$$5.53 + 1.54 + 1.37 + 2.07 = 10.5 \text{ pts}$$

Jamestown Settlement (cont)

Impervious Cover - Prior To 1990 (Pre Ches Bay)

Total Site Area = 26.0 acres. - per Kenny Jenkins

Impervious Cover = 10.52 ac

DA's 4, 5, + 6 - Ex. Imp. 3.0 ac

1, 2, 3 - " " 7.52

10.52 ac

Revised Pt. Calc from previous page

Consider Site Area to be 24.0 - 3.0 (ex. imp) = 21.0

$$PE \text{ Calc } \left(\frac{14.7 - 3.0}{21.0} \right) 10 + \left(\frac{3.0}{21.0} \right) 10 + \left(\frac{4.75}{21.0} \right) 6 + \frac{4.3}{21.0} \times 10 = \underline{\underline{10.4 \text{ pts}}}$$

∴ 10 Pt criteria is met for DA's 4, 5, + 6

Redevelopment Criteria

3.0 ac of imp cover existed prior to Ches Bay w/ no BMP

- now it will be treated in 50% eff BMP

6.36 ac imp - buildout per this plan

Peak Load related to impervious area = 3

Post Devel - $6.36 \times 50\% + 1.23 \times 60\% = 3.9$

$$\% \text{ Imp} = \frac{3}{24} = 12.5\% \quad (\text{pre})$$

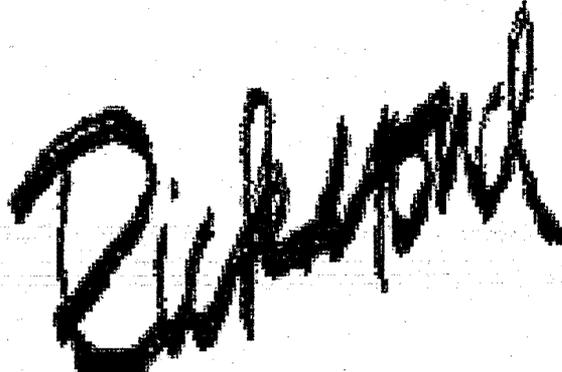

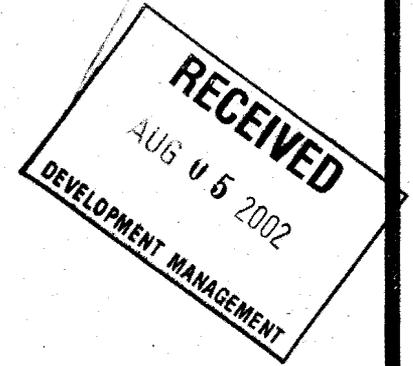

$$\% \text{ Imp} = \frac{8.06}{24} = 33.6\% \quad (\text{post})$$

From SWM Manual - Pond/Wetland System - adeq. for 38-66% Imp Cover

Const Wetland - adeq for 22-37% Imp Cover

INTRODUCTION

The Jamestown Settlement facility is located in James City County, Virginia adjacent to the Colonial National Historical Parkway and Route 31. The facility is owned by the State of Virginia and is operated by the J-YF. The facility consists of approximately 26 acres and utilizes approximately 10 additional acres of Virginia Department of Transportation (VDOT) property for a total of approximately 36 acres of partially developed, yet wooded land. A vicinity map depicting the location of the site is provided as Figure 1 of this report.

The Jamestown-Yorktown Foundation (J-YF) has commissioned Rickmond Engineering, Inc. as a consultant to HBA Architects to prepare a Stormwater Management Master Plan (SMMP) for the southwest portion of the site to aid in planning short- and long-term improvements to the facility. To that end, Rickmond Engineering has compiled the necessary data and conducted the appropriate field investigations relevant to the 24-acre study area. This evaluation also included the collection and evaluation of existing public data and reports commissioned by agencies other than the J-YF. This report has been prepared in accordance with the general criteria outlined in the unofficial General Submission Guidelines for a Stormwater Management/Drainage Concept Plan prepared by the James City County Environmental Division (JCCED) and the applicable sections of the Chesapeake Bay Preservation Act (CBPA).

This report will present viable improvement options and draw the appropriate conclusions and recommendations for proceeding with the stormwater management aspects of continued responsible development of the study area. It is anticipated that this report will also serve as the basis of final design for potential study area improvements. A study area map depicting the master plan conditions, the existing property line, and the approximate limits of the study area is provided as Figure 2 of this report. It should be noted that the northeast portion of the property to include the future parking lot improvements and public roadway re-alignment is excluded from the study area. The J-YF, working in conjunction with the VDOT, has initiated preliminary design efforts to provide the required stormwater management facilities for this area.

SOILS

According to the "Soil Survey of James City and York Counties and the City of Williamsburg, Virginia" (1985), the facility is located within 5 classifications of soils. The approximate locations of these classifications are depicted in Appendix A of this report, and include; Emporia fine sandy loam (14C), Emporia complex (15D), Pamunkey soils (26B), Tetotum silt loam (32), and Udorthents (35).

Emporia Fine Sandy Loam (14C)

Emporia fine sandy loam soil is deep, strongly sloping, and well drained.

Typically, the surface layer of this soil is dark grayish brown fine sandy loam about 4 inches thick. The subsurface layer is pale brown loam 9 inches thick. The subsoil extends to a depth of 58 inches. It is yellowish brown loam with mostly strong brown mottles in the upper part; yellowish brown, firm sandy clay loam with strong brown and gray mottles in the middle part; and mottled gray and brown, firm sandy clay loam in the lower part. The substratum to a depth of at least 75 inches is variegated gray, brown, and red, firm sandy clay loam.

In this Emporia soil, permeability is moderate in the upper part of the subsoil and moderately slow in the lower part. The erosion hazard is severe.

Emporia Complex (15D)

Emporia complex consists of areas of deep, moderately steep, well-drained Emporia soils and areas of similar soils that formed over layers of fossil shells.

Typically, the surface layer of Emporia soils is dark grayish brown fine sandy loam about 4 inches thick. The subsurface layer is pale brown loam 7 inches thick. The subsoil extends to a depth of 54 inches. It is yellowish brown loam with mostly strong brown mottles in the upper

part; yellowish brown, firm sandy clay loam with strong brown and gray mottles in the middle part; and mottled gray and brown, firm sandy clay loam in the lower part. The substratum is variegated brown, red, and gray, firm sandy clay loam to a depth of at least 75 inches.

In these Emporia soils, permeability is moderate in the upper part of the subsoil and moderately slow in the lower part. The erosion hazard is severe.

Pamunkey Soils (26B)

Pamunkey soils are deep, gently sloping, and well drained.

The texture of the surface layer of these soils is highly variable throughout the survey areas. Typically, the surface layer of the Pamunkey soils is dark grayish brown sandy loam about 4 inches thick. The subsurface layer is brown sandy loam 10 inches thick. The subsoil extends to a depth of 43 inches. It is mostly yellowish brown sandy loam and dark brown sandy clay loam. The substratum is mostly brown and strong brown loamy sand and sand to a depth of at least 75 inches.

The permeability of these Pamunkey soils is moderate, and the erosion hazard is moderate.

Tetotum Silt Loam (32)

Tetotum silt loam soil is deep, nearly level, and moderately well drained.

Typically, the surface layer of this soil is dark grayish brown silt loam about 5 inches thick. The subsurface is mostly yellowish brown silt loam, silty clay loam, clay loam, and loam 41 inches thick. It has gray mottles at a depth of more than 27 inches. The substratum is mottled yellowish brown, gray, and strong brown fine sandy loam to a depth of at least 65 inches.

The permeability of this Tetotum soil is moderate, and the erosion hazard is slight.

Udorthents (35)

Udorthents consist of deep, well-drained and moderately well drained loamy soil material in areas where the soils have been disturbed during excavation and grading. The permeability ranges from moderately rapid to slow and the erosion hazard ranges from slight to severe.

RECEIVING WATERS

The primary receiving waters of the Jamestown Settlement study area is the James River.

HYDRIC SOIL AND CRITICAL EROSION AREAS

Based on the James City County Tax Maps 46-3 and 54-1, there are no anticipated hydric soils on-site. The following soils, Emporia fine sandy loam (14C) and Emporia complex (15D) potentially have a severe erosion hazard; and Udorthents (35) has an erosion hazard characteristic that ranges from slight to severe. These 3-soil footprints can be found on the map in Appendix A of this report. *hydric soils are not determined from the top maps.*

FLOOD PLAIN

The site appears to be located in a 100-year flood hazard zone "AE" (elevation 8.5 feet) per Federal Emergency Management Agency (FEMA), Flood Insurance Rate Map, Community-Panel No. 510201-0040B, dated January 6, 1991. The approximate location of the 100-year flood zone is depicted on the map provided as Appendix B of this report. *Not provided See large map.*

RESOURCE PROTECTION AREA

Environmental Specialties Group, Inc. (ESG) of Newport News is in the process of preparing a wetlands delineation. This delineation is being performed in accordance with the 1987 Army Corps of Engineers (ACOE) Wetland Delineation Manual. The resource protection area (RPA) is defined as a 100-foot inland buffer adjacent to the delineated wetlands. Wetlands and RPA are

see attached large map

depicted on the map provided in Appendix C of this report. Copies of the ESG Wetland Delineation documentation, to include the ACOE confirmation, are also provided in Appendix C of this report.

DRAINAGE AREAS

The study area consists of the 2 existing drainage areas which drain to the James River. It should be noted that the scope of this master plan was only for the 24-acre southwest portion of the site and did not include the 12-acre northeast portion of site. However, in order to provide a full description of the entire 36-acre site, a brief discussion will be provided.

The entire 36-acre site consists of six drainage areas after buildout of the master-planned improvements. Drainage areas (DAs) No. 1, 2, and 3 are located on the northeast side of the site and are not part of the master plan. DAs No. 4, 5, and 6 are located on the southwest side of the site and are the focus of the SMMP.

DAs No. 1, 2, and 3 are currently under design, under a separate contract, to include the new bus parking lot (DA No. 1) and the new visitor parking lot (DAs No. 2 and 3). Each of the 3 drainage areas contain a James City County Dry Swale 10-Point Best Management Practice (BMP) that treats 100 percent of each drainage area. DA No. 1 is located in the James River watershed and DAs No. 2 and 3 are located in the Powhatan Creek watershed. It should be noted that the dry swale BMPs in DAs No. 2 and 3 discharge into the VDOT BMP designed in conjunction with the realignment of State Route No. 359 before ultimately discharging into Powhatan Creek.

DA No. 4 discharges to a James City County Pond/Wetland System 10-Point BMP before ultimately discharging into the James River, DA No. 5 discharges to a James City County Pocket Wetland 6-Point BMP before discharging into the James River and DA No. 6 sheet flows directly to the James River. The drainage areas, including acreages and impervious areas, are depicted on the map provided as Appendix D of this report.

see large map

EXISTING SITE CONDITIONS

The study area consists of approximately 24 acres containing 6 buildings: an Indian Village, the James Fort, wooded areas, and grassy areas. The facility's topography is relatively flat around the 4 main buildings and the fort (Elevation 15) and slopes to the James River at approximately 4 percent. The site is bounded on the west by the James River, on the north by Jamestown Road (Route 31), on the east by vacant land, and on the south by the Colonial National Historic Parkway.

PROPOSED SITE CONDITIONS

A master plan of the entire Jamestown Settlement site has been compiled from the various consultants and is depicted on the map provided as Appendix D of this report.

See large map

PROPOSED STORMWATER MANAGEMENT FACILITIES

It is the desire of the J-YF to analyze the study area and draw reasonable conclusions regarding the construction of stormwater management facilities that will comply with the current James City County criteria. As stated in the James City County Guidelines for Design and Construction of Stormwater BMPs, October 1999, "to achieve compliance, an SMMP must attain at least 10 BMP points through a combination of structural BMPs and preservation of natural open space". The applicable excerpts from these guidelines are provided as Appendix E of this report.

The potential structural BMPs are grouped into 6 categories: (1) wet ponds, (2) wetlands, (3) infiltration, (4) filtering systems, (5) open channel systems, and (6) extended dry detention. Placement of the BMP on the site is one of the major selection criteria in determining which BMP has the acceptable design criteria to fit the site conditions. After reviewing the proposed improvements for the site, it was determined that the best location for BMPs is in the low-lying wooded areas adjacent to Jamestown Road (Route 31). After considering the 6 structural BMP options available, the wetlands category that consists of various design criteria was selected as the most viable scenario for the existing site.

Wet ponds were not selected due to the extensive clearing of trees and wetlands disturbance that would be required to create a pond with the necessary surface area. Infiltration methods are not feasible due to the poor infiltration rates of the soils located in the proposed BMP location. Filtering systems were not considered acceptable due to the extensive clearing of trees and wetlands disturbance required and a potential high water table in the low-lying area. Open channel systems and extended dry detention were eliminated due to the clearing of woods and wetlands disturbance required to construct the channel and the large drainage (greater than 5 acres) upland of the BMP location. Therefore, wetlands were determined to be the most viable BMP for the site due to the existing wetlands on-site and the low-lying wooded area, which could easily be converted to a stormwater management facility.

*← clearing of
long-term conversion of vegetation
type.*

James City County's 10-Point BMP requirements for compliance with the CBPA would be satisfied by the combined use of a conservation area and ²1 wetland water quality BMP. A total of 4.30 acres of the 24-acre study area are proposed to be preserved as a conservation area. A Pond/Wetland System BMP (B-3) is proposed to be constructed in DA No. 4 to receive and treat stormwater runoff from DA No. 4. A Pocket Wetland BMP (B-4) is proposed to be constructed in DA No. 5 to receive and treat stormwater runoff from DA No. 5. The combination of a conservation area and structural BMPs will provide 10.01 points as calculated according to the James City County BMP worksheet and are provided in Appendix E of this report. A map of the approximate limits of the proposed conservation area and wetland water quality BMP location is provided as Appendix F of this report. *See large map*

EROSION AND SEDIMENT CONTROL MEASURES

It is anticipated that the erosion and sediment (E & S) control practices for the potential improvements would be designed in accordance with the current editions of the James City County Erosion and Sediment Control Ordinance and the Virginia Erosion and Sediment Control Handbook. The Contractor is typically required to secure a copy of each publication and thoroughly familiarize themselves with all applicable practices contained therein that may be pertinent to their project. The purpose of such practices, including but not limited to those listed below, shall be to preclude the transport of all waterborne or airborne sediments resulting from

In general, all E & S control measures will be checked daily and after each significant rainfall. The following items should be checked in particular:

- The sediment traps and basins should be checked regularly for sediment cleanout.
- The gravel outlets should be checked regularly for a sediment buildup that will prevent drainage. If the gravel outlets are clogged by sediment, it shall be removed and cleaned or replaced.
- The silt fence barrier should be checked regularly for undermining or deterioration of the fabric. Sediment shall be removed when the level of sediment deposition reaches half way to the barrier.
- The seeded areas should be checked regularly to ensure that a good stand of vegetation is maintained. Areas should be fertilized, mulched, and reseeded as needed.
- The diversion dikes should be checked after every storm and repairs made to the dike, flow channel, outlet, or sediment trapping facility, as necessary.

Once every two weeks, whether a storm event has occurred or not, the measures should be inspected and repairs made if needed. Damages caused by construction traffic or other activity must be repaired before the end of each working day. Site-specific E & S control plans will be developed for each component of the master-planned improvements under a separate contract.

CHANNEL ADEQUACY

There are no anticipated areas where stream channel protection or channel adequacy computations are required as the study area drains directly to the James River. However, should they become necessary, channel adequacy calculations would be performed as part of the final design.

PERMITS

As outlined in the James City County Environmental Division General Submission Guidelines for Stormwater Management Drainage Concept and Plan, the following permits may potentially be required: United States Army Corps of Engineers (USACOE) wetlands permit, James City County land disturbing permit, VDOT CE-7 permit, archaeological permit, and historical permit. The extent to which these or other permits are required will be determined once preliminary construction plans for the proposed improvements have been developed.

CONCLUSIONS AND RECOMMENDATIONS

The J-YF is preparing for future development at the Jamestown Settlement facility located in James City County, Virginia. To comply with the pollutant removal requirements of the CBPA, the study area must be designed to obtain a minimum of 10 points as calculated according to the James City County criteria. The SMMP has developed a design approach that achieves a total of 10.01 BMP points through a combination of 4.30 acres of conservation areas and 2 wetland water quality BMPs.

The wetland water quality BMP storage volume has been preliminarily designed to accommodate 9.87 acres of impervious cover in DA No. 4 and 2.85 acres of impervious cover in DA No. 5.

At buildout, the Jamestown Settlement study area will consist of approximately 43 percent impervious area. The buildout impervious area will be less than the 60 percent maximum allowed by the County and therefore is considered acceptable.

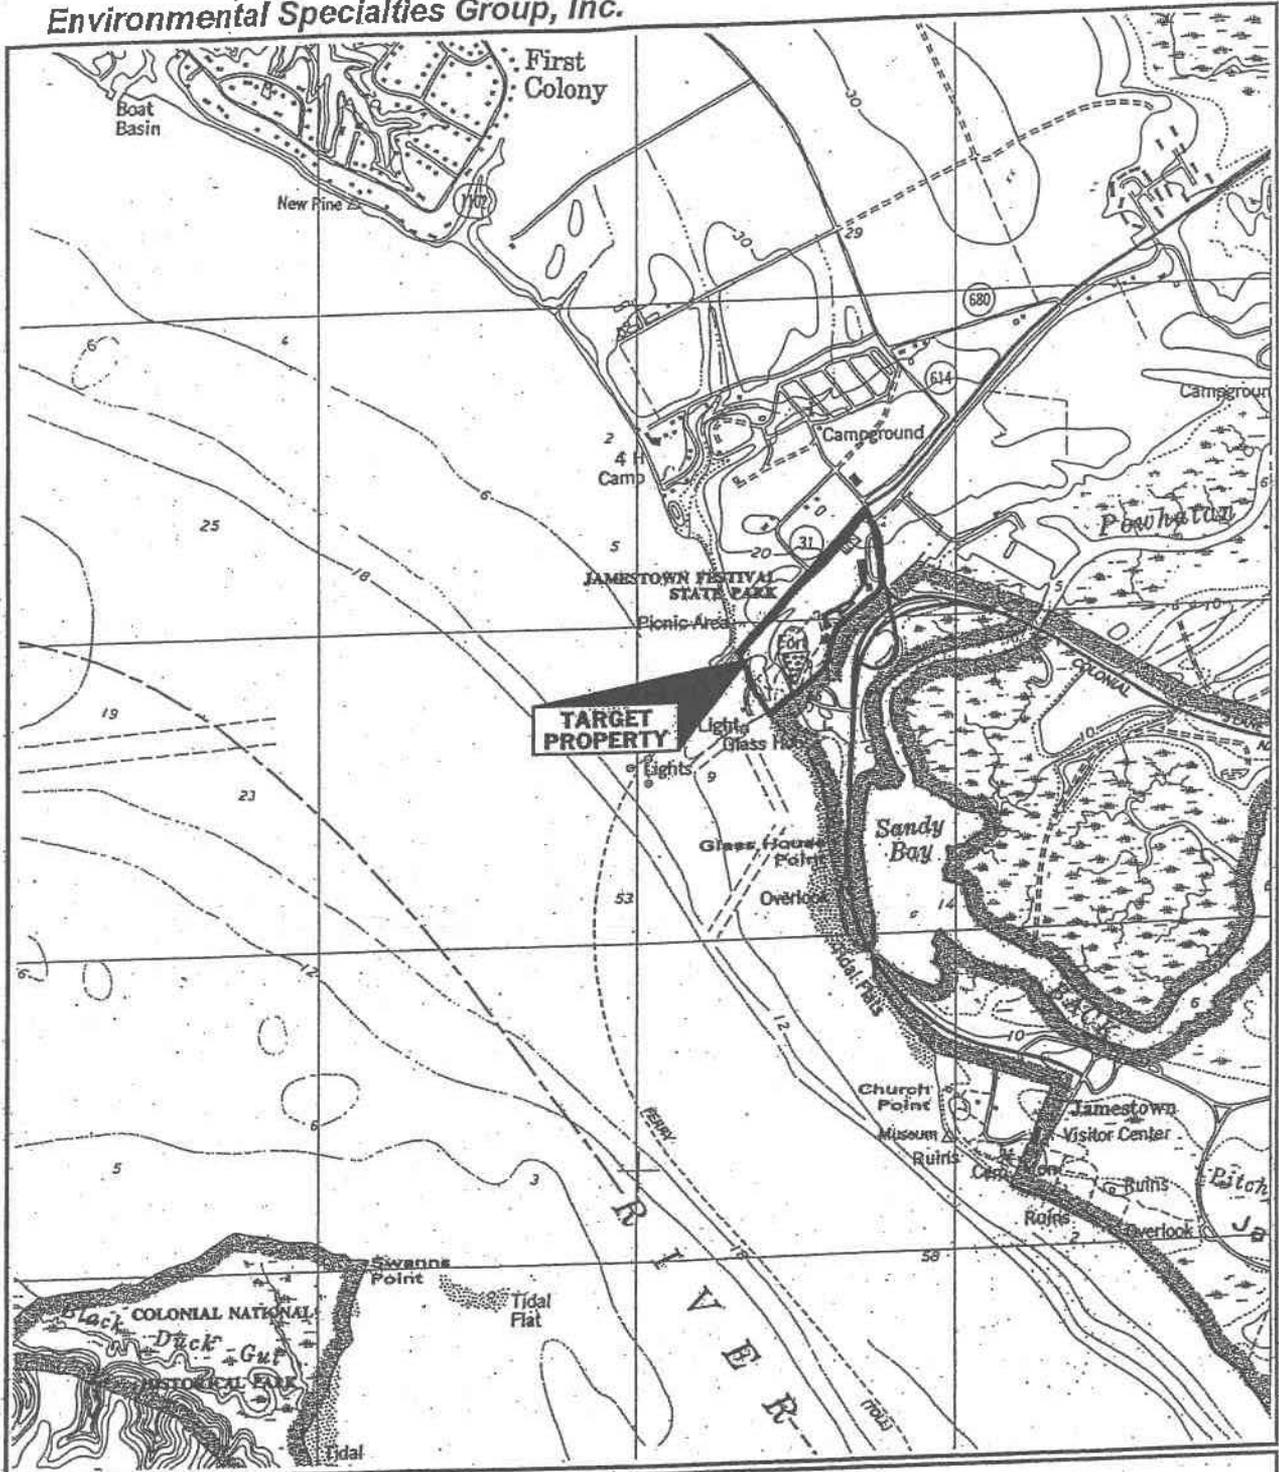

Therefore, based on this investigation, it is recommended that the J-YF proceed with the delineation of the conservation area and developing the final design for construction of the wetland water quality BMPs and associated appurtenances. Following the delineation of the conservation area and the construction of the BMPs, the Jamestown Settlement would have stormwater management facilities in place to accommodate increased impervious area associated

with the future master-planned development. The facilities, as proposed, would allow the J-YF to continue to responsibly develop historically accurate educational facilities without having to invest time and resources to construct future BMPs or preserve additional conservation areas.

1.0 PROJECT PURPOSE AND DESCRIPTION

The Jamestown-Yorktown Foundation (Foundation) proposes to continue improving their facilities at the Jamestown Settlement (Jamestown) in James City County, Virginia. Currently, a new theater, special exhibition hall, and exhibition gallery are under construction. The Foundation now proposes to renovate the waterfront area of Jamestown Settlement, which is known as the Riverfront. The development of the new facilities will include a new Riverfront Rest Area, Shipwright (maintenance) building, two amphitheater's, and an outdoor group area.

The purpose of the project is to better utilize the existing area for the public. The existing Riverfront area is of antiquated design that no longer meets the needs of the public. The proposed project entails demolishing the existing Shipwright building, restrooms, and sewage pump building. The existing Shipwright building consists of a dilapidated one-story building occupying approximately 1,500 square feet. The building was built in the 1970's and has concrete floors, wooden walls, and a tin roof. The building is used solely for maintenance purposes and is not seen by the public. The rest rooms are located adjacent to the existing shipwright building. This approximate 600 square foot facility was built in the 1990's. The restroom building is brick with a wooden shingled roof. The old sewage pump building, approximately 286 square feet, is a brick building built in the 1950's. Another brick building adjacent to the pump house is expected to be demolished. This brick building is currently unoccupied. Photographs of the exterior of the existing structures are included within Appendix A.

As area to known as the Riverfront Rest Area is proposed to be located along the visitor's path that leads from the entrance to Jamestown west to the waterfront. The proposed rest area will include a snack stand that is primarily vending machines, an open-air gift shop, restrooms, and a storage area. The proposed restrooms will be approximately 1,280 square feet while the combined gift shop and food service area will be approximately 1,065 square feet. Tables and bench seating will be built surrounding the shops to accommodate the rest area. To provide an aesthetic rest area the area will be landscaped with ornamental vegetation. These proposed facilities will be located around the existing pump station in areas where the existing facilities are currently located.

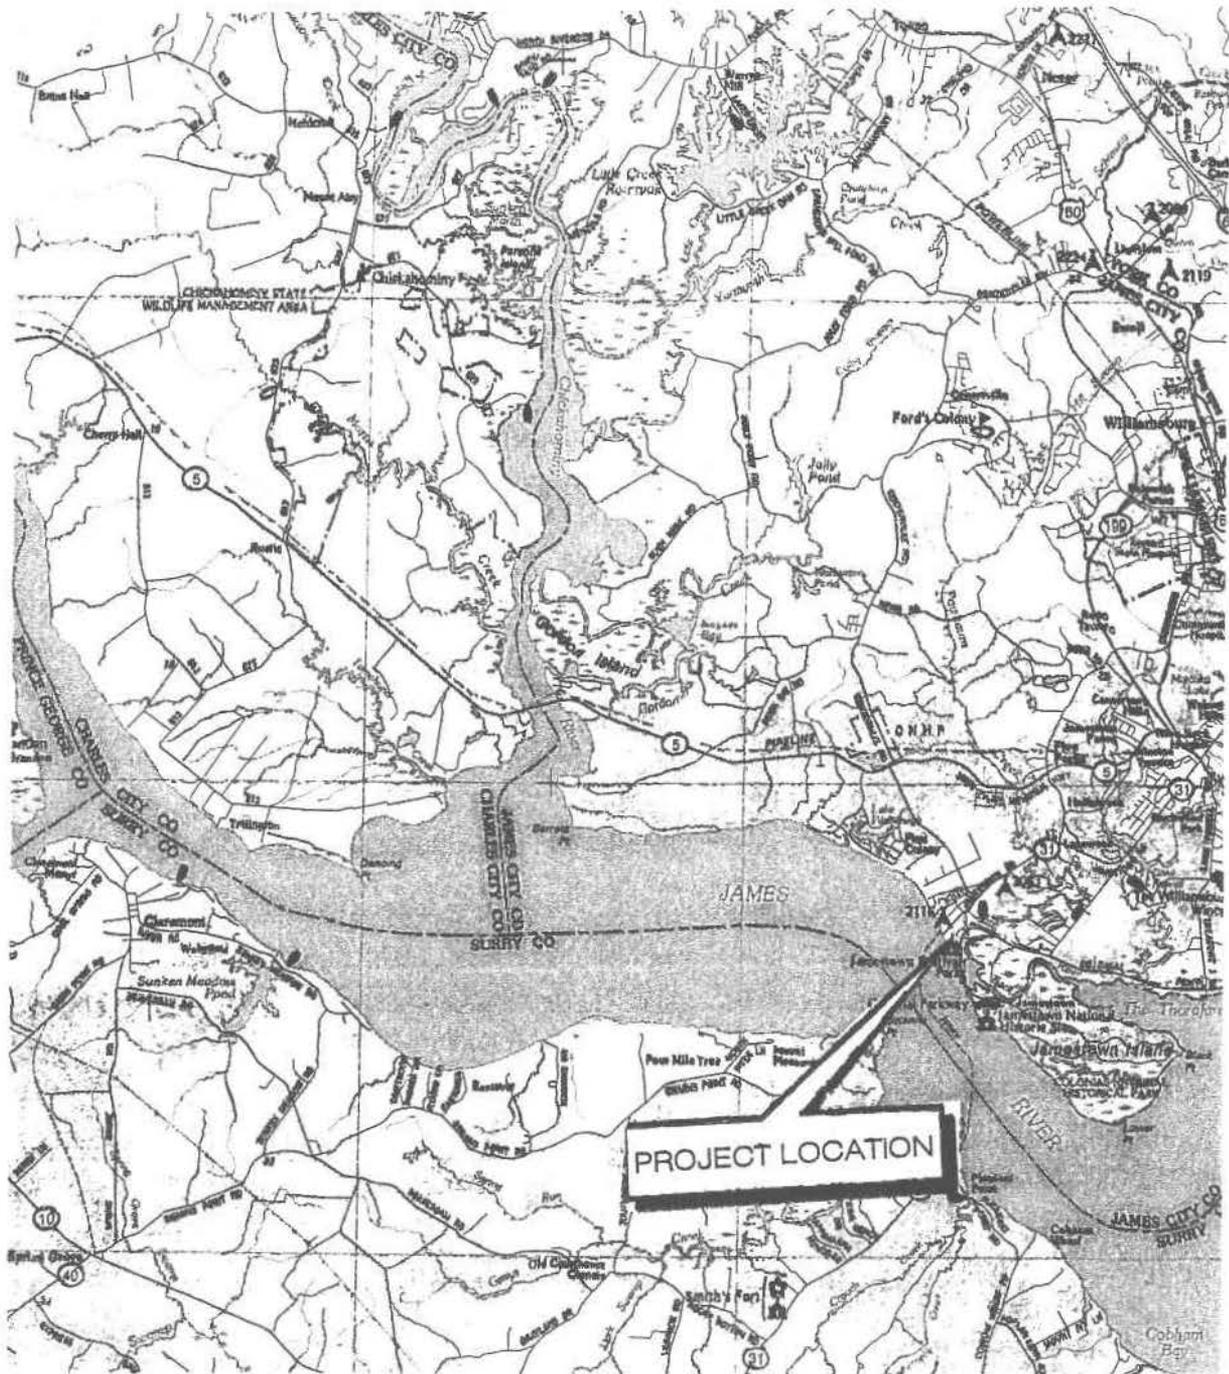

The proposed shipwright building is designed as a two-story structure with approximately 4,000 square feet on the first floor and 2,720 square feet on the second floor. This structure will be located approximately 60 feet north of rear of the buildings associated with the outdoor rest area. The building will be used for maintenance and storage and will not be accessible by the public. The first

floor will accommodate an indoor work area, office, and storage area. To provide additional workspace, an adjacent outdoor work area is also proposed. The second floor will include a loft area that is open to the first floor. The proposed ship maintenance building will result in an increase in impervious area of approximately 4,000 square feet. Currently the site for the proposed structure is cleared with a few trees and is used to store wooden planks. Due to the increase in size and capacity of the shipwright building, fifteen parking spaces have been added to the existing parking area. This area is currently cleared due to the existing parking facility.

Two amphitheatres are proposed to be located near natural areas to function as educational tools. One amphitheater, expected to seat approximately 75 to 100 people, will overlook a forested wetland. The second amphitheater is smaller and expected to seat approximately 50 to 125 people. This amphitheater will be located north of the Riverfront area in an existing wooded area. To provide an observation area along the waterfront, an open space area is also being provided.

2.0 AFFECTED ENVIRONMENT

The project site is located within the southern portion of James City County, east of Route 31 (Jamestown Road) and along the James River (Figure 2-1). This area is located in the middle Atlantic Coastal Plain which stretches from Massachusetts to Florida and is characterized by little topographic relief extending from the Atlantic Ocean west to the fall line. The topography of the project area is nearly level or gently sloping toward the James River (Figure 2-2). Adjacent properties consist of the Jamestown Fort located to the east, the James River to the west, and a wooded area to the north. The existing conditions on the project site were constructed in the late 1950's when the Jamestown Settlement was first erected as a tourist attraction and educational facility. The Jamestown Settlement is a living history museum recalling the early days of the Jamestown Colony. Adjacent to the existing Riverfront area are several interpretive centers which consist of a mock colonial village, a mock Indian village and reproductions of the three ships that initially landed at Jamestown in 1607.

3.0 IMPACTS OF THE PROJECT

The following section describes the direct and indirect environmental impacts resulting from the proposed demolition and subsequent construction of new buildings in the same location.

3.1 ENDANGERED, THREATENED, OR RARE PLANTS, ANIMALS OR INSECTS

The Virginia Department of Conservation and Recreation's Division of Natural Heritage (DCR) and the Virginia Department of Agriculture and Consumer Services were contacted to obtain information regarding known occurrences of endangered, threatened, or rare plants, animals or insects at or near the project site. In addition, the Virginia Department of Agriculture and Consumer Services is under a memorandum of agreement and whose comments are represented by DCR. Based on information received from DCR, no adverse impacts are expected as a result of the proposed project (see correspondence within Appendix B).

3.2 STORAGE TANKS

One aboveground storage tank is currently located on the subject property east of the existing Riverfront rest area. The tank is located inside the old pump house that is proposed for demolition and was used for sewage purposes. This tank will be removed during the demolition of the pump house. No storage tanks are proposed to be utilized in association with the new facilities.

3.3 HISTORICAL OR ARCHAEOLOGICAL SITES

Jamestown is rich in historical significance. The island of Jamestown, which houses the Colonial National Historic Park, is located southeast of the project site and is the site of the first permanent English settlement established in 1607. The remains of a glasshouse built in 1608 still exist within the National Park and archaeologists have recently unearthed the foundations of the original James Fort.

The project site is also located within the limits of the Governor's Land Archaeological District. This Archaeological District is on the National Register of Historic Places. It is roughly bounded on the southeast and east by Powhatan Creek, on the northeast by a tributary of Powhatan Creek, on the northwest by the boundaries of the National Park Service property, and on the west by the First Colony subdivision and the James River. Located within this archaeological district is a concentration of known structure sites dating from the seventeenth and eighteenth centuries. These

structure sites are expected to yield information important to the understanding of life in Virginia's first century of colonization. The nearest historic standing structure is the Amblers on the James site located approximately 2,000 feet northwest of the project site.

The demolition of the existing structures and construction of the new facilities should have no impact on the known historic and archaeological resources of the area. The new facilities will not impact known archaeological sites nor disrupt the view-shed of existing historic structures or known archaeological sites.

3.4 WILDLIFE

Wildlife is dependent upon the habitat in which they thrive. The major vegetation communities within the project site include an open grass area, a wetland area, and upland forest. Due to the presence of the existing structures, habitat for specific wildlife species such as deer is limited. The adjacent properties do not contain significant amounts of wildlife species due to the presence of the development of Jamestown and the number of visitors drawn throughout the area throughout the year.

3.5 VEGETATION

Vegetation on the project site consists of various ornamental trees, shrubs and herbaceous plantings, wetland species and forest. Mature upland forest is present on the project site and includes willow oak (*Quercus phellos*), northern red oak (*Quercus rubra*), sweetgum (*Liquidambar styraciflua*), red maple (*Acer rubrum*), and loblolly pine (*Pinus taeda*). Small areas of partially wooded area will be removed with the construction of the new buildings.

The dominant species found in the nontidal wetland area located within the limits of the project site include willow oak (*Quercus phellos*), cottonwood (*Populus deltoides*), red maple (*Acer rubrum*), sweet gum (*Liquidambar styraciflua*), highbush blueberry (*Vaccinium corybosum*), netted chain fern (*Woodwardia areolata*), and southern waxy sedge (*Carex glaucescens*). No wetlands are expected to be impacted within the limits of this approximate 0.4 acre area.

3.6 TIDAL AND NONTIDAL WETLANDS

A nontidal wetland, approximately 0.04 acres, associated with the James River is present within the project site between the existing amphitheater and the Riverfront rest area. The wetlands were delineated by the Environmental Specialties Group, Inc. in December 2000 according to the methodology outlined in the 1987 U.S. Army Corps of Engineers Wetland Delineation Manual (TR Y-87-1). The wetlands will not be impacted, alternatively the wetlands will be enhanced in an effort to support increased vegetation and wildlife. The proposed demolition of the existing structures and construction of the new facility will not cause impacts to the nontidal or tidal wetlands.

3.7 STREAMS, RIVERS, LAKES, AND PONDS ON OR NEAR THE SITE

The James River is present approximately 120 feet west of the project site. A path from the project site extends to a dock that overlooks the James River. The nearest stream is Powhatan Creek located approximately 1,100 feet south-southeast of the project site. The proposed project will not cause impacts to these aquatic resources.

3.8 WATERSHEDS OF SIGNIFICANT IMPORTANCE FOR PUBLIC WATER SUPPLIES

The project site is located entirely within the James River drainage basin. The James River is not used as a public water supply source in the area of the project site. All potable water is provided by James City Service Authority. The demolition of the existing facility and construction of the proposed facility will have no expected affect on sensitive watersheds or public water supplies.

3.9 CHESAPEAKE BAY RESOURCE PROTECTION AREA

The project site is located adjacent to the Resource Protection Area (RPA) of the James River. The proposed project conditions will not occur within the RPA line, with exception to the group area that will be located along the path to the pier. This portion of the RPA is currently cleared and therefore the proposed bench seating will not adversely affect the RPA area. James City County (JCC) classifies all land area outside of RPA's as Resource Management Area (RMA) features, which includes the subject property.

The demolition of the existing structure and construction of the proposed facility will be accomplished in accordance with the JCC reviewed and approved plans. The proposed action will, therefore, have a minimal affect on the Chesapeake Bay Resource Protection Areas.

3.10 100-YEAR FLOODPLAIN

A portion of the subject site is located within the James River 100-year flood hazard zone "AE" (elevation 8.5 feet) per the Federal Emergency Management Act (FEMA), Flood Insurance Map, Community Panel No. 510201-0040B, dated January 6, 1991. There is no construction proposed within this floodzone. All demolition and subsequent construction will be completed in accordance with the JCC reviewed and approved plans.

3.11 GROUNDWATER RESOURCES

Groundwater is an important resource of the James-York Peninsula that historically has provided a major part of the Peninsula's freshwater supply. Sediment of the James-York Peninsula forms a layered sequence of aquifers and intervening confining units. One water-table aquifer, seven confined aquifers, and intervening confining units have been identified in the area. The aquifers from youngest to oldest are: the Columbia, the only aquifer which is confined throughout its entire extent; the Yorktown-Eastover; the Chickahominy-Piney Point, the Aquia, and the upper, middle, and lower Potomac aquifers. Groundwater is withdrawn primarily from the Chickahominy-Piney Point and upper and middle Potomac aquifers in the central portion of the James-York Peninsula. The Chickahominy-Piney Point aquifer contains water with high concentrations of chloride, sodium, dissolved solids, and fluoride. The middle and upper Potomac aquifers contain water with elevated concentrations of chloride, sodium, and dissolved solids and are the aquifers most often used for potable water supplies in this region.

The Jamestown-Yorktown Foundation currently utilizes JCC waterlines for all potable water. Therefore, the construction of the proposed facility will have no impact on groundwater resources.

3.12 PARKS AND RECREATION AREAS

The subject property is located within the existing Jamestown Settlement, which is a museum complex funded by the Commonwealth of Virginia. Jamestown is located north of the Colonial National Historic Park and south of the Jamestown Festival State Park. Due to the locations of these parks, no adverse impacts are expected as a result of the proposed construction.

3.13 IMPORTANT NATURAL AREAS

The Powhatan Creek natural area is located within 5 miles of the project area. This is one of the most important natural areas on the Virginia Peninsula. This project will not adversely affect the Powhatan Creek natural area.

3.14 IMPORTANT SCENERY AND SCENIC RESOURCES

The project area is located at the southern terminus of the Colonial National Historical Parkway that traverses the Peninsula from Yorktown through Williamsburg to Jamestown Island. The existing and proposed facilities are, and will continue to be, shielded from the Parkway by the stand of mature trees located between Jamestown and the Colonial Parkway. Therefore, the project is not expected to have a negative effect on the scenic resources of the area.

3.15 AIR QUALITY

The project site is located in James City County, within the Virginia Department of Environmental Quality Region 6. The region consists of counties in the James-York Peninsula and southeast Virginia. Ambient air quality is monitored by the DEQ at several locations within Region 6, for comparison to the National Ambient Air Quality Standards (NAAQS) for: sulfur oxides, nitrogen oxides, suspended particulates, lead, ozone, and carbon monoxide (CO). The NAAQS, as promulgated by the U. S. Environmental Protection Agency (EPA), provide a basis for determining how healthy the ambient air is in a particular region. Region 6 is currently listed as an attainment area.

No long-term impacts are anticipated on the local and regional air quality as a result of the proposed action. A very slight increase in Total Suspended Particulates may result from fugitive dust generated by construction activities; however, due to the limited surface area disturbance and given the physical characteristics of the soil, any impact would be negligible. This development will not cause a significant increase in traffic to the area, or an increase in the number of gasoline-powered vehicles in the area.

3.16 SOLID WASTE DISPOSAL FACILITIES

Several forms of solid waste and wastewater will be produced onsite. Each will be handled in a specific manner.

All construction waste material not designated for re-use will become the property of the contractor and will be removed from the site. Solid waste (i.e., paper, wood) generated at the facility will be carried to a landfill by a commercial waste hauling company. No solid waste will be disposed of or burned onsite.

Sewage generated by the site during the construction and operation of the Riverfront Rest Area and Shipwright building will be handled by the Hampton Roads Sanitation District wastewater treatment plant. It is anticipated that the wastewater generated during the operation of the new facility will be approximately the same or less than the amount currently used. This is a result of the installation of more water efficient fixtures. The facilities will be connected to the sewer force main by way of an eight-inch sewer main. The wastewater utilities will conform to the requirements of the Virginia Sewerage Regulations.

Any lead based paint and asbestos containing materials will be removed and disposed of during demolition in a manner consistent with applicable state and federal regulations. No known hazardous materials will be generated by the construction or operation of the new facility.

3.17 POTABLE WATER SUPPLIES

Potable water is currently supplied by the James City Service Authority.

4.0 ALTERNATIVES ANALYSIS

Three alternatives for providing the needed Riverfront Rest Area, Shipwright building, and outdoor entertainment and educational areas at Jamestown include: 1.) utilizing the existing facilities; 2.) renovating the existing facilities; and 3.) demolishing the existing facilities and constructing new facilities.

4.1 NO ACTION ALTERNATIVE

Due to the age of the existing shipwright building, it is dilapidated and near collapse. The current Riverfront Rest Area consists only of restrooms and a water fountain. The facilities are too small to accommodate the reception of the volume of individuals and groups that currently visit the Jamestown Settlement. In addition, there is currently no sufficient group area for educational programs planned at Jamestown Settlement. The No Action Alternative will not accomplish the project purpose, which is to better utilize the existing area by providing better-quality Riverfront facilities and a Shipwright building. Due to the layout, age, and location of the existing buildings, they are of limited value to other state agencies, as well.

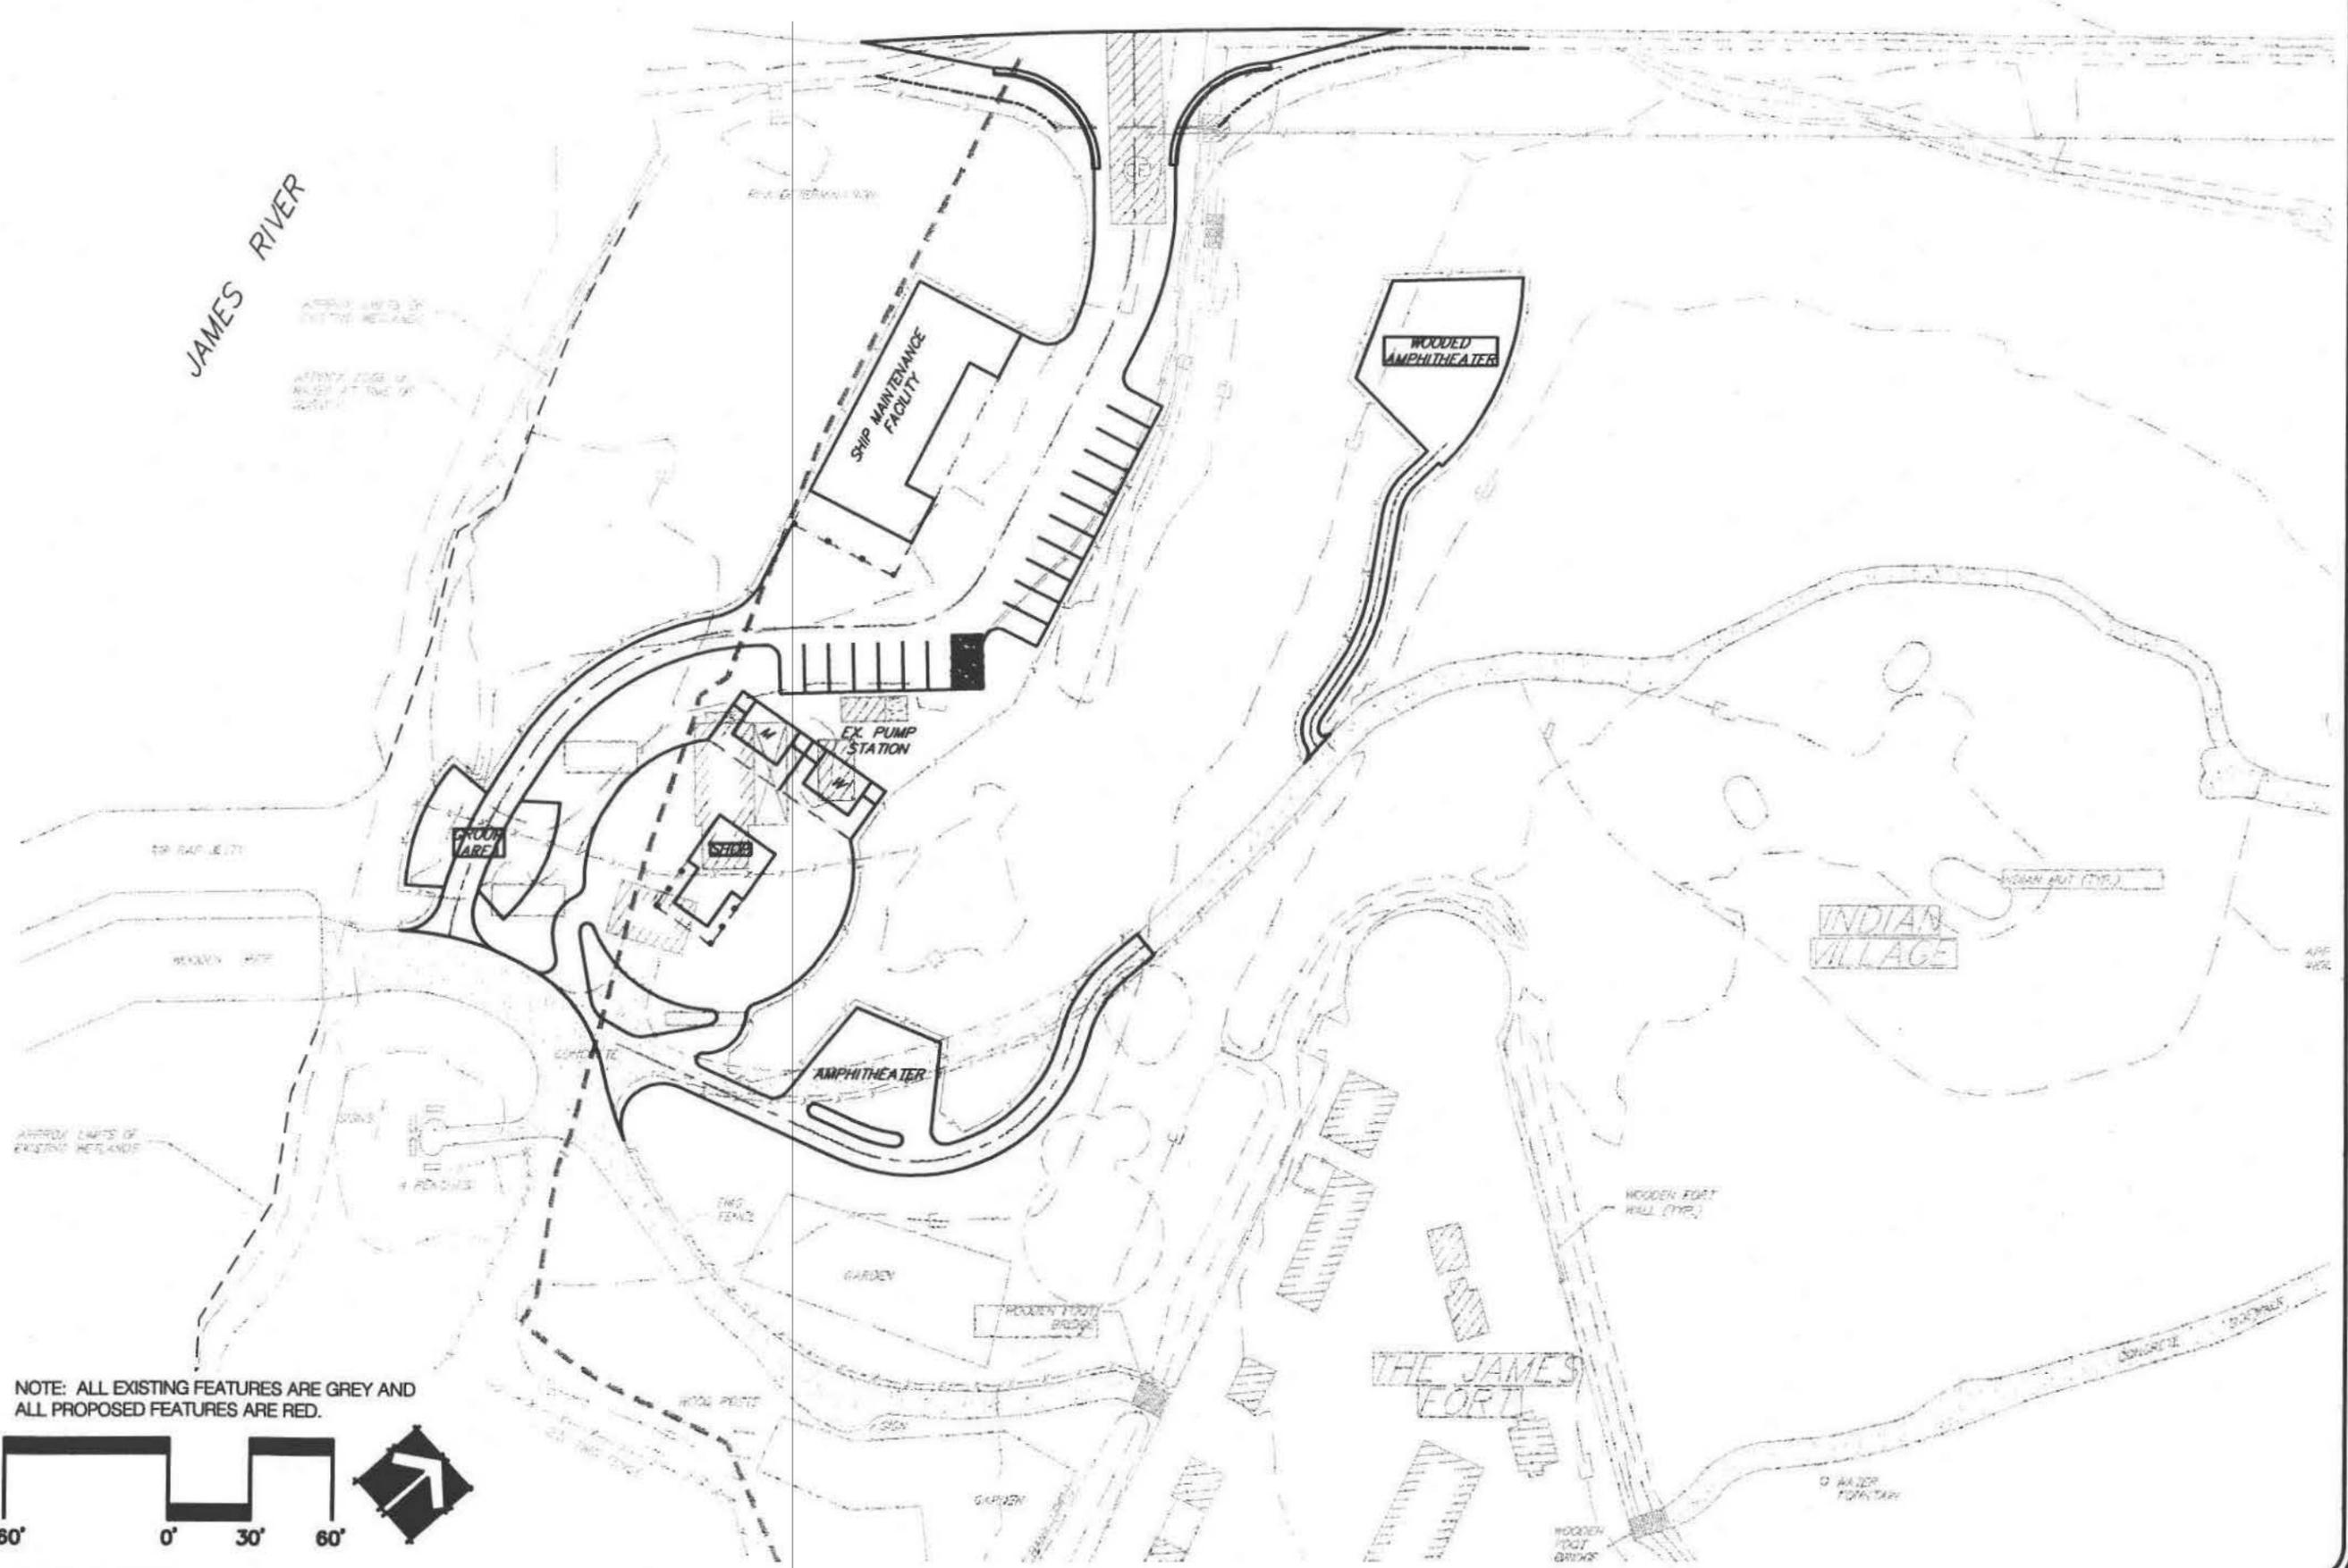

4.2 RENOVATION OF THE EXISTING FACILITY

In order to renovate the existing facility, the buildings would need to be completely gutted in order to remove all asbestos-containing materials and lead-based paint materials. Renovation of the facility would not solve the problem of insufficient public space. In addition, the Shipwright building the structure is not constructed to support a multi-level building. Renovation of the existing facilities would also not provide additional utility to other state agencies. There is no parking to provide for additional staff from another institution and the location of the building, away from centers of urban activity, makes access by others inconvenient. Cost analysis for renovation also indicates that renovation will cost approximately the same as constructing a new facility, while not reaching the necessary goals of the facility upgrade.

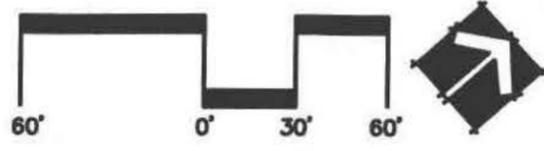

4.3 SELECTED ALTERNATIVE, DEMOLITION AND NEW CONSTRUCTION

A new facility at the existing project site will meet the project goals of providing adequate space to accommodate the needs of the individuals and groups that currently visit and are projected to visit the Jamestown Settlement. In addition, the new Riverfront rest area has been designed to better

serve the needs of existing and future patrons. A conceptual site plan for the amphitheaters, group area, vending and shop complex, and Shipwright building facility is shown in Figure 4-1. In addition, detailed plans supplied by the architect, Guernsey & Tingle, are included in Map Pocket A.

NOTE: ALL EXISTING FEATURES ARE GREY AND ALL PROPOSED FEATURES ARE RED.

5.0 IRREVERSIBLE ENVIRONMENTAL CHANGES

Every effort has been made to blend the proposed facility with the other Jamestown structures by utilizing similar building materials and designing a conservative structure that will not detract from the other museum exhibits. The new structure, however, will irreversibly change the scenery at the project site. Due to the chosen design and the buildings' placement outside the area used for public consumption, the irreversible environmental change will be minimal.

APPENDIX A

Exterior Photographs of the Existing Conditions

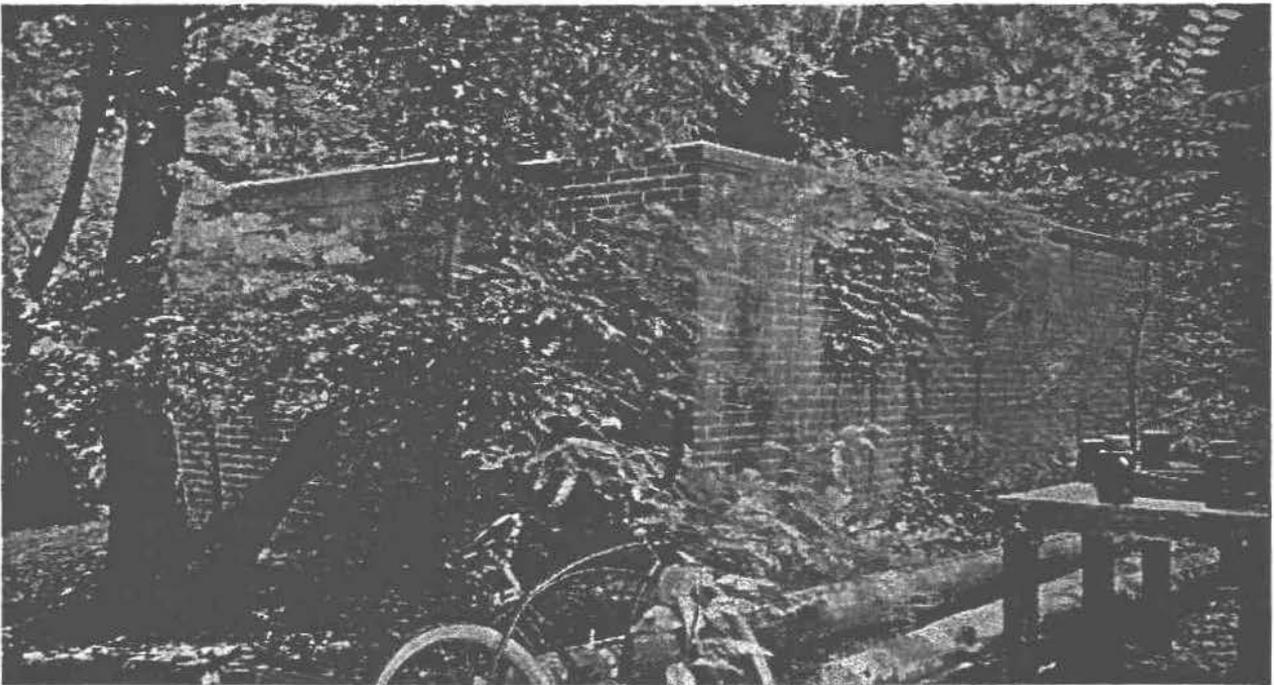

The existing Shipwright building. This will be demolished.

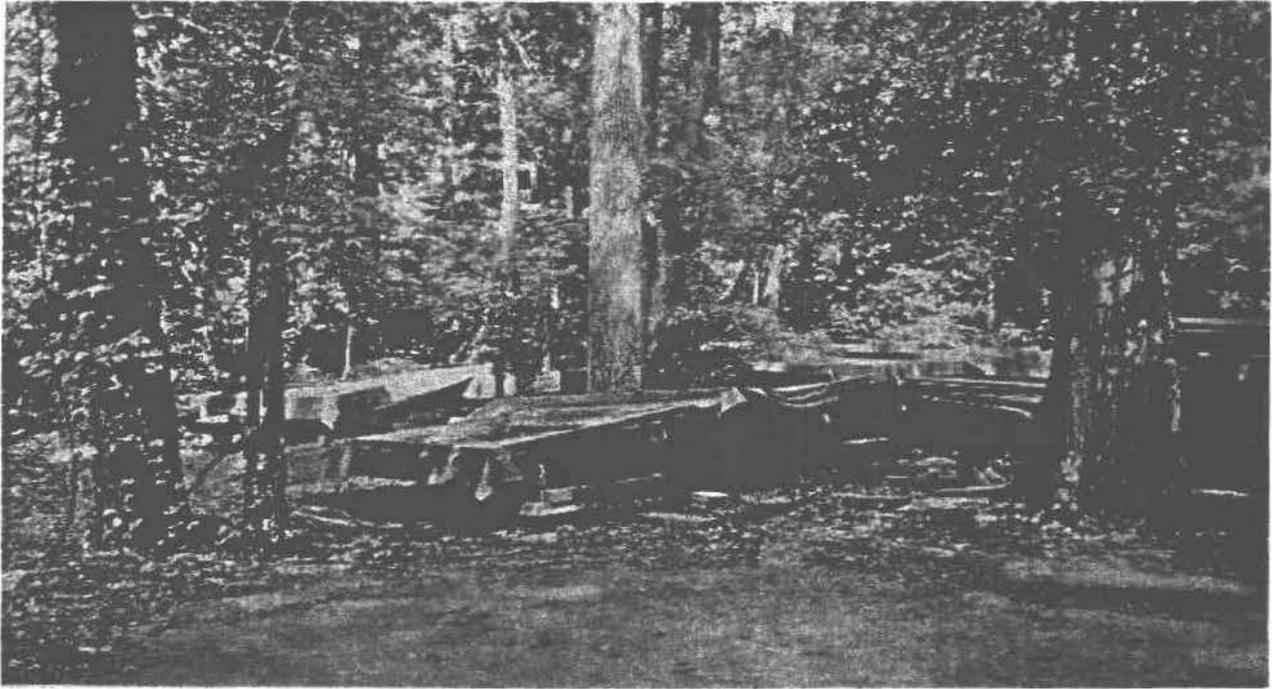

The existing restroom, these will be demolished to make room for new and updated facilities.

The existing pump house that is to remain.

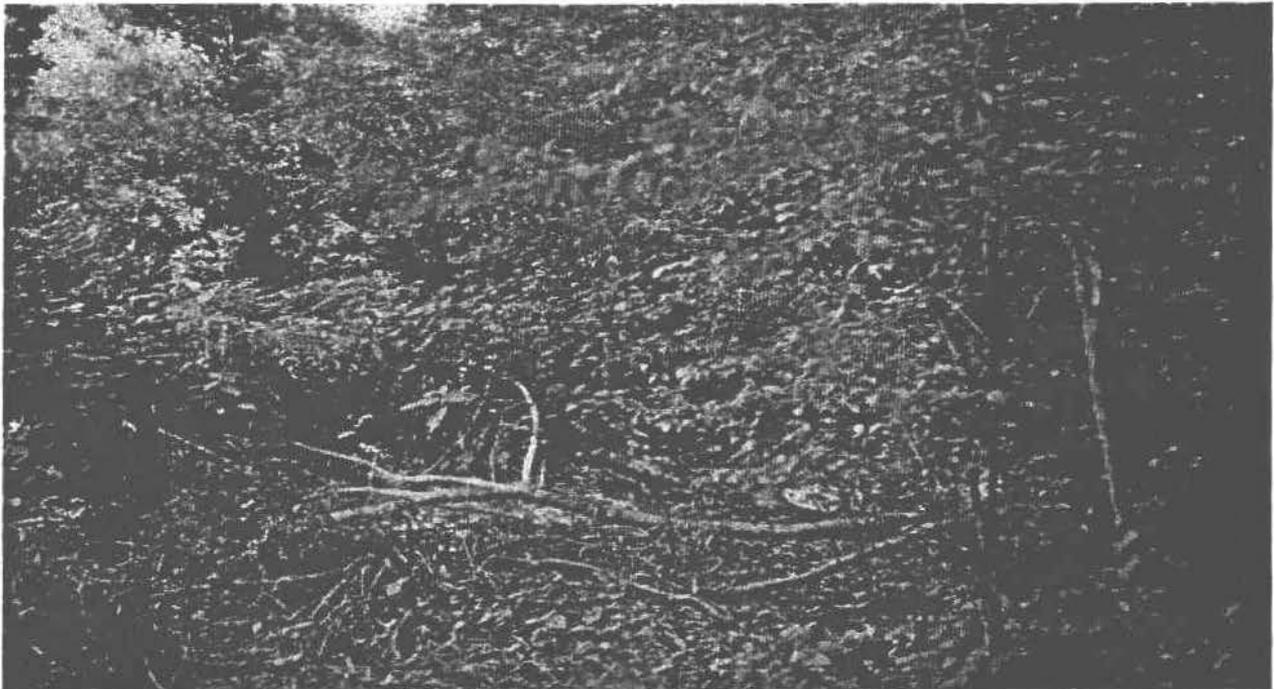

The pump house proposed for demolition.

The area proposed for the new Shipwright building.

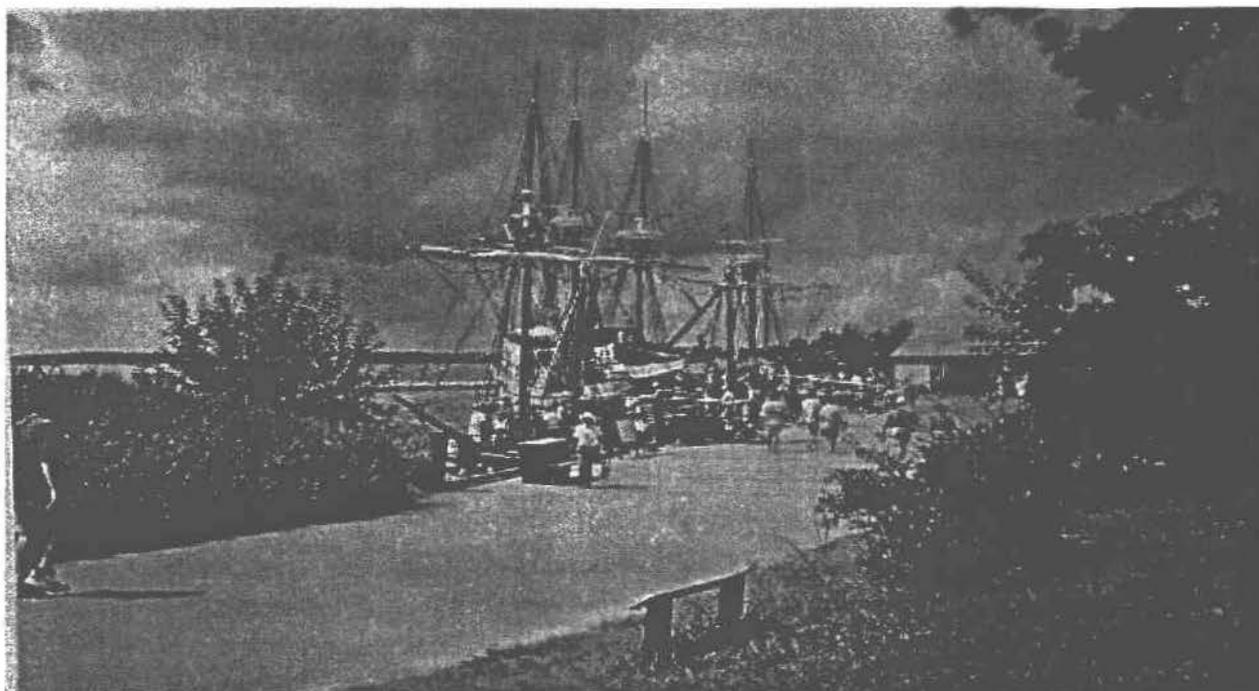

The proposed amphitheater site adjacent to the existing forested wetland.

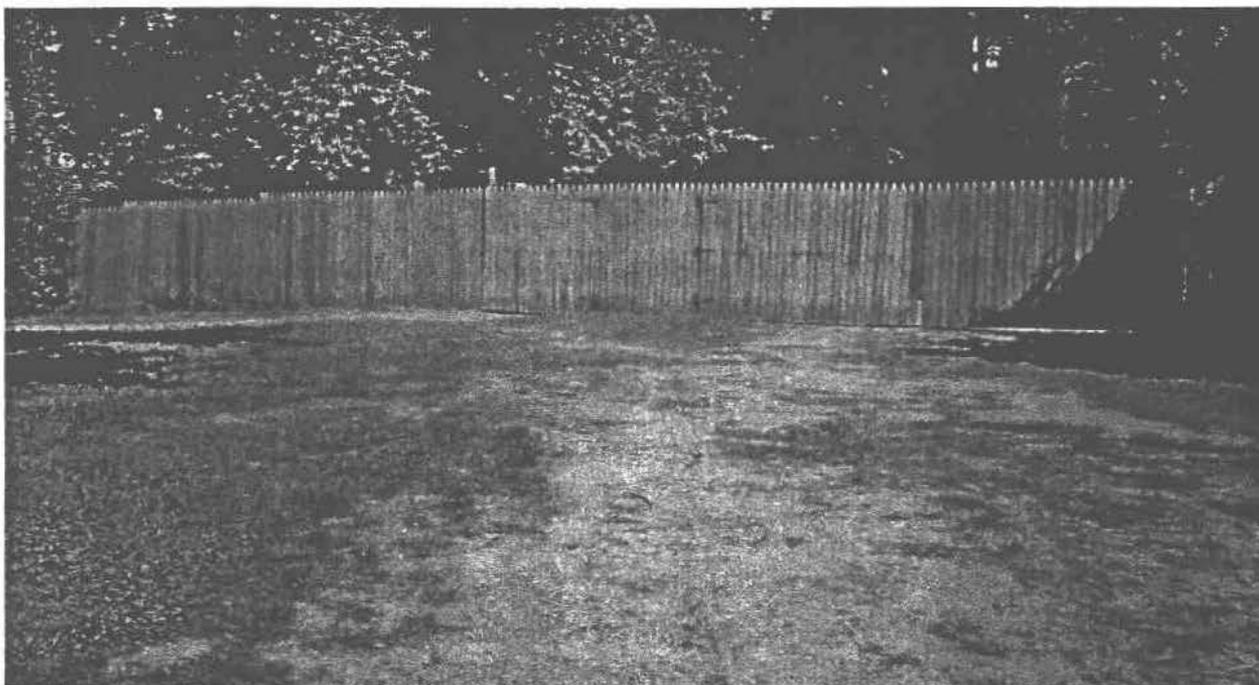

View of the existing wetland that is to be enhanced for educational purposes.

The proposed amphitheater site for the amphitheater to be located in a forested area.

The dock and colonial ships at the Riverfront area. This will be the view from the proposed group area.

1.0 PROJECT PURPOSE AND DESCRIPTION

The Jamestown-Yorktown Foundation (Foundation) proposes to continue improving their facilities at the Jamestown Settlement in James City County, Virginia. Currently, a new theater, special exhibition hall, and exhibition gallery are under construction. The Foundation now proposes to renovate the Riverfront area of the Jamestown Settlement. The proposed development will include a 17th century boat-building shed. The wooden structure will be open-air to allow visitors to watch colonial style small wooden boat construction.

The purpose of the project is to better utilize the existing area for the public. The boat-building shed will enhance the Riverfront area for Jamestown visitors. The existing conditions at the project site consist of a cleared grass area adjacent to the James River. Photographs of the proposed project site and the surrounding conditions of the project area are included within Appendix A.

The proposed boat-building shed will be located along the visitors path that leads to the pier along the James River where the colonial ships are docked. The structure will be approximately 41 feet wide and 36-1/2 feet long with clapboard roofing and earthen floors. There will be no walls on this building except for a small storage area which will be approximately 117.4 square feet, with brick flooring and clapboard siding. The elevation of the wooden posts will be approximately 8 feet high with concrete bases. The elevation to the highest point on the roof will be approximately 22 feet. The impervious area associated with the roofing of the building is approximately 1500 square feet. A conceptual site plan for placement of the proposed building is shown in Figure 1-1. Figure 1-2 shows the conceptual building plan.

2.0 AFFECTED ENVIRONMENT

The project site is located within the central portion of James City County, east of Route 31, and along the James River (Figure 2-1). This area is located in the middle Atlantic Coastal Plain which stretches from Massachusetts to Florida and is characterized by little topographic relief extending from the Atlantic Ocean west to the fall line. The topography of the project area is nearly level or gently sloping towards the James River (Figure 2-2). The Jamestown Settlement was first erected in the late 1950's as a tourist attraction and educational facility. The Jamestown Settlement is currently a living history museum recalling the early days of the Jamestown Colony. Adjacent to the existing Riverfront area are several interpretive centers which consist of a mock Colonial village, a mock Indian village, and reproductions of the three ships which initially landed at Jamestown in 1607. Adjacent properties to the project area consist of James Fort located to the northeast, the James River and a wooded area to the west, and the Riverfront visitor's area to the south. The existing conditions on the project site consist of a cleared fallow field. No structures will be demolished in the construction of the boat-building shed.

JAMESTOWN BOAT BUILDING SHED

JAMES CITY CO., VA

SEPTEMBER 2001

3.0 IMPACTS OF THE PROJECT

The following sections describe the direct and indirect environmental impacts of the proposed construction of the new building in the Riverfront area in Jamestown Settlement.

3.1 ENDANGERED, THREATENED, OR RARE PLANTS, ANIMALS OR INSECTS

The Virginia Department of Conservation and Recreation's Division of Natural Heritage was contacted to obtain information regarding known occurrences of threatened or endangered rare plants, animals, or insects at or near the project site (see correspondence within Appendix B). In addition, the Virginia Department of Agriculture and Consumer Services is under a memorandum of agreement and whose comments are represented by DCR. According to correspondence received from DCR, there are no adverse impacts expected as a result of the proposed project.

3.2 STORAGE TANKS

No storage tanks are proposed or are expected to be utilized in association with the new boat-building shed or its construction.

3.3 HISTORICAL OR ARCHAEOLOGICAL SITES

Jamestown is rich in historical significance. The project site is located northwest of the Jamestown-Colonial National Historical Park, which is a federally owned property. The island of Jamestown, located southeast of the project site, is the site of the first permanent English settlement established in 1607. The remains of a glasshouse built in 1608 exist within the National Park and archaeologists have recently unearthed the foundations of the original James Fort.

The project site is also located within the boundaries of the Governor's Land Archaeological District. This Archaeological District is on the National Register of Historic Places. It is roughly bounded on the southeast and east by Powhatan Creek, on the northeast by a tributary of Powhatan Creek, on the northwest by the boundaries of the National Park Service property, and on the west by the First Colony subdivision and the James River. Within this archaeological district is located a concentration of known structure sites dating from the

seventeenth and eighteenth centuries. These structure sites are expected to yield information important to the understanding of life in Virginia's first century of colonization. The nearest historic standing structure is the Amblers on the James site, located approximately 2,000 feet northwest of the project site.

The construction of the new structure should have no impact on the historic and archaeological resources of the area. The new facility will not impact known archaeological sites nor disrupt the view-shed of existing historic structures or known archaeological sites.

3.4 WILDLIFE

Wildlife is dependent upon the habitat in which they thrive. The major vegetation community within the project site includes an open grass area. Due to the presence of the surrounding structures, however, habitat for wildlife is severely limited. The adjacent properties do not contain significant amounts of wildlife species due to the presence of the numerous visitors to the project site throughout the year.

3.5 VEGETATION

Vegetation on the project site consists of native grasses and native hardwood and pine species shoots. Mature upland forest is present south/southwest as well as west of the project site and includes such species as willow oak (*Quercus phellos*), northern red oak (*Quercus rubra*), sweetgum (*Liquidambar styraciflua*), red maple (*Acer rubrum*), and loblolly pine (*Pinus taeda*). The area northwest of the project area includes tidal wetland grass species along the James River inlet. The area to the east is fallow field and James Fort. There is no vegetation within the boundaries of the Fort that will be affected by the construction. There are also examples of English Agricultural Fields located to the north/northeast of the subject site. These will not be adversely affected either.

3.6 TIDAL AND NONTIDAL WETLANDS

A tidal wetland, approximately 0.02 acres, associated with the James River is present northwest of the project site located between the proposed structure and the James River. The wetland area includes the fringe along the banks of the James River. The wetlands were delineated by the Environmental Specialties Group, Inc. in December 2000 according to the

methodology outlined in the 1987 U.S. Army Corps of Engineers Wetland Delineation Manual (TR Y-87-1). The proposed construction of the new building will not cause impacts to the tidal wetlands (Figure 1-1).

3.7 STREAMS, RIVERS, LAKES, AND PONDS ON OR NEAR THE SITE

The James River is present west and northwest of the project site. A path from the project site extends to a pier that extends over the James River. The nearest stream is Powhatan Creek located approximately 1,000 feet east of the project site. The minimal construction associated with the proposed boat building shed will not cause impacts to any aquatic environments. Measures will be taken to ensure no secondary impacts will occur to these waters.

3.8 WATERSHEDS OF SIGNIFICANT IMPORTANCE FOR PUBLIC WATER SUPPLIES

The project site is located entirely within the James River drainage basin. The James River is not used as a public water supply source in the area of the project site. All potable water is provided by James City Service Authority. The construction of the proposed structure will have no effect on sensitive watersheds or public water supplies, as no water will be run to the structure.

3.9 CHESAPEAKE BAY RESOURCE PROTECTION AREA

The project site is currently a grass field located adjacent to the James River within the Resource Protection Area (RPA) as defined in the Chesapeake Bay Preservation Ordinance. The James River is present approximately 40 feet west of the project site. The proposed conditions will consist only of a small open-aired wooden structure that will minimally effect the RPA area. The construction of the proposed building will be accomplished in accordance with County reviewed and approved plans. The construction of the boat building shed within the RPA will require a waiver or exception from the Chesapeake Bay Preservation Ordinance administered by James City County (Figure 1-1).

3.10 100-YEAR FLOODPLAIN

The subject site is located within the James River 100-year flood hazard zone "AE" (elevation 8.5 feet) per the Federal Emergency Management Act (FEMA), Flood Insurance Map,

Community Panel No. 510201-0040B, dated January 6, 1991. The proposed conditions will consist only of a small open-aired wooden building and will have minimal adverse effects on the 100-year floodplain. The construction of the proposed building will be accomplished in accordance with County reviewed and approved plans (Figure 1-1).

3.11 GROUNDWATER RESOURCES

Groundwater is an important resource of the York-James Peninsula that historically has provided a major part of the Peninsula's freshwater supply. Sediment of the York-James Peninsula forms a layered sequence of aquifers and intervening confining units. One water-table aquifer, seven confined aquifers, and intervening confining units have been identified in the area. The aquifers from youngest to oldest are: the Columbia, the only aquifer which is confined throughout its entire extent; the Yorktown-Eastover; the Chickahominy-Piney Point, the Aquia, and the upper, middle, and lower Potomac aquifers. Groundwater is withdrawn primarily from the Chickahominy-Piney Point and upper and middle Potomac aquifers in the central portion of the James-York Peninsula. The Chickahominy-Piney Point aquifer contains water with high concentrations of chloride, sodium, dissolved solids, and fluoride. The middle and upper Potomac aquifers contain water with elevated concentrations of chloride, sodium, and dissolved solids and are the aquifers used the most in this region for potable water supplies.

Jamestown-Yorktown Foundation currently utilizes James City County waterlines for all potable water. Therefore, the construction of the proposed building will have no impact on groundwater resources.

3.12 PARKS AND RECREATION AREAS

The subject property is located at the Jamestown Settlement, which is a living museum complex funded by the Commonwealth of Virginia. The boat-building shed will enhance the Riverfront area for Jamestown visitors. The proposed boat-building shed will be located along the visitor's path that leads to the pier along the James River where the colonial ships are docked.

3.13 IMPORTANT NATURAL AREAS

The Powhatan Creek natural area is located within 5 miles of the project area. This is one of the most important natural areas on the Virginia Peninsula. This project will not adversely affect the Powhatan Creek natural area.

3.14 IMPORTANT SCENERY AND SCENIC RESOURCES

The project area is located at the southern terminus of the Colonial National Historical Parkway that traverses the Peninsula from Yorktown through Williamsburg to Jamestown Island. The existing and proposed facility are, and will continue to be, shielded from the Parkway by the stand of mature trees located between the Jamestown Settlement buildings and the roadway (Route 639). Therefore, the subject project will not have an adverse effect on the scenic resources of the area.

3.15 AIR QUALITY

The project site is located in James City County, which is within the Virginia Department of Environmental Quality Region 6, which consists of the James-York Peninsula and southeast Virginia counties. Ambient air quality is monitored by the DEQ at several locations within Region 6, for comparison to the National Ambient Air Quality Standards (NAAQS) for: sulfur oxides, nitrogen oxides, suspended particulates, lead, ozone, and carbon monoxide (CO). The NAAQS, as promulgated by the U. S. Environmental Protection Agency (EPA), provide a basis for determining how healthy the ambient air is in a particular region. Region 6 is currently listed as an attainment area.

No long-term impacts are anticipated on the local and regional air quality as a result of the proposed action. A very slight increase in Total Suspended Particulates may result from fugitive dust generated by construction activities, however, due to the limited surface area disturbance and given the physical characteristics of the soil, any impact would be negligible. The addition of the boat building structure will not cause a significant increase in traffic to Jamestown Settlement, or an increase in the number of gasoline-powered vehicles to the area.

3.16 SOLID WASTE DISPOSAL FACILITIES

All construction waste material not designated for re-use will become the property of the contractor and will be removed from the site. Solid waste (i.e., paper, wood) generated at the facility will be carried to a landfill by a commercial waste hauling company. No solid waste will be disposed of or burned onsite.

The proposed structure will not contain plumbing therefore no wastewater will be generated by the facility. The structure will be supplied with electrical power. In addition, no known hazardous materials will be generated by the construction or operation of the new facility.

3.17 POTABLE WATER SUPPLIES

The James City Service Authority currently supplies potable water.

4.0 ALTERNATIVES ANALYSIS

Three alternatives for providing the needed enhancement of the Riverfront at the Jamestown Settlement, including the boat-building shed are: 1) no action alternative, 2) renovating an existing facility, and 3) constructing a new facility.

4.1 NO ACTION ALTERNATIVE

The current Riverfront area consists only of restrooms, a water fountain, and a pathway leading to the pier overlooking the James River and colonial ships. The proposed colonial boat-building shed will enhance the educational exhibits; as a result the facility will be better suited to accommodate the reception of the volume of individuals and groups that currently visit the Jamestown Settlement. The structure will be used as an educational tool that will allow visitors to witness colonial style small boat construction. The No Action Alternative will not accomplish the project purpose, which is to better utilize the existing area by providing better quality Riverfront facilities at the Jamestown Settlement.

4.2 RENOVATION OF AN EXISTING FACILITY

In order to renovate an existing facility, the design plan of the building would need to be completely altered in order to create the 17th century open-aired style building. The open-aired style is necessary for visitors to view boat construction in an authentic colonial manner. Currently, no such building exists with such specifications. In addition, the Jamestown Settlement was first erected in the late 1950's. Therefore, most if the current buildings would need to be completely gutted in order to remove all asbestos-containing materials and lead-based paint materials. Renovation of an existing facility would not solve the problem of insufficient public space. Cost analysis for renovation also indicates that renovation will cost approximately the same as constructing a new facility. In addition, due to the age of the buildings, removal of possible lead-based paint and asbestos containing materials may be necessary.

4.3 SELECTED ALTERNATIVE, NEW CONSTRUCTION

The expansion of the Riverfront area with the proposed structure will meet the overall project goals of providing adequate space and educational opportunities to accommodate the current and projected needs of the individuals and groups that visit Jamestown Settlement. In

addition, the new boat-building shed will enhance the Riverfront area and serve as an educational tool providing insight on the lifestyle in colonial times. The building will be constructed based upon authentic colonial building style. A conceptual site plan for the proposed structure is shown in Figure 1-2.

5.0 IRREVERSIBLE ENVIRONMENTAL CHANGES

Every effort has been made to blend the proposed facility with the other Jamestown structures by utilizing similar building materials and designing a conservative structure that will not detract from the other museum exhibits. The new structure, however, will irreversibly change the scenery at the project site. Due to the chosen design and the buildings' placement the irreversible environmental change will be minimal.

6.0 MITIGATION CONCEPTS

Means to mitigate and/or monitor adverse environmental impacts are discussed in the sections below. Mitigation measures in the form of avoidance, design modification, rehabilitation, and preservation or compensation is considered for unavoidable impacts to the environment caused by the proposed action.

Appropriate erosion and sediment controls would be utilized during the construction phase of this project to minimize any potential sedimentation impacts. The potential for soil erosion will be minimal from construction of this project. Mitigation measures to assure minimal impacts to the environment from soil disturbance would be incorporated in the design and construction of the facility. These measures include:

1. Implementing Best Management Practices (BMPs) and soil erosion control measures in accordance with Virginia Erosion and Sediment Control Regulations. Specifically:
 - a. Permanent or temporary soil stabilization shall be applied to denuded areas within seven days after final grade is reached on any portion of the site.
 - b. During construction of the project, soil stockpiles shall be stabilized or protected with sediment trapping measures.
 - c. Sediment basins and traps, perimeter dikes, sediment barriers, and other measures intended to trap sediment shall be constructed as a first step in any land-disturbing activity.

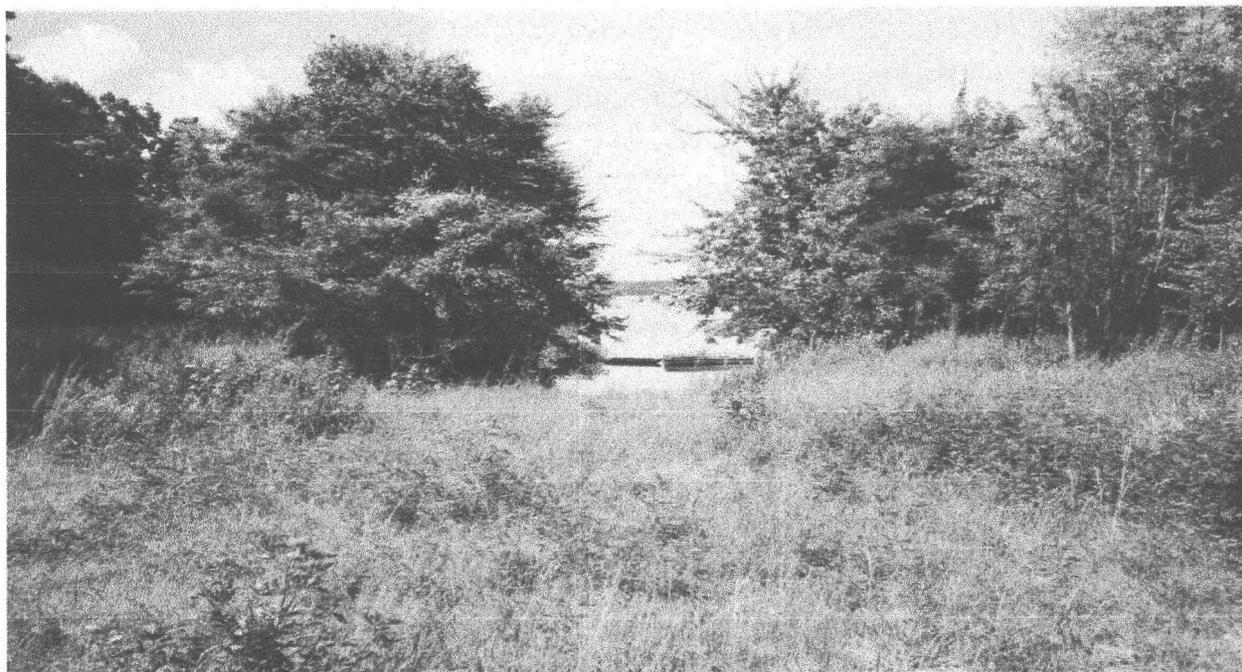

Erosion control practices would be in accordance with the Virginia Erosion and Sediment Control Handbook prepared by the Virginia Soil and Water Conservation Commission. Proper landscaping after construction will also minimize soil loss that could occur before establishment of permanent vegetation on the proposed site.

APPENDIX A

Photographs of Existing Conditions

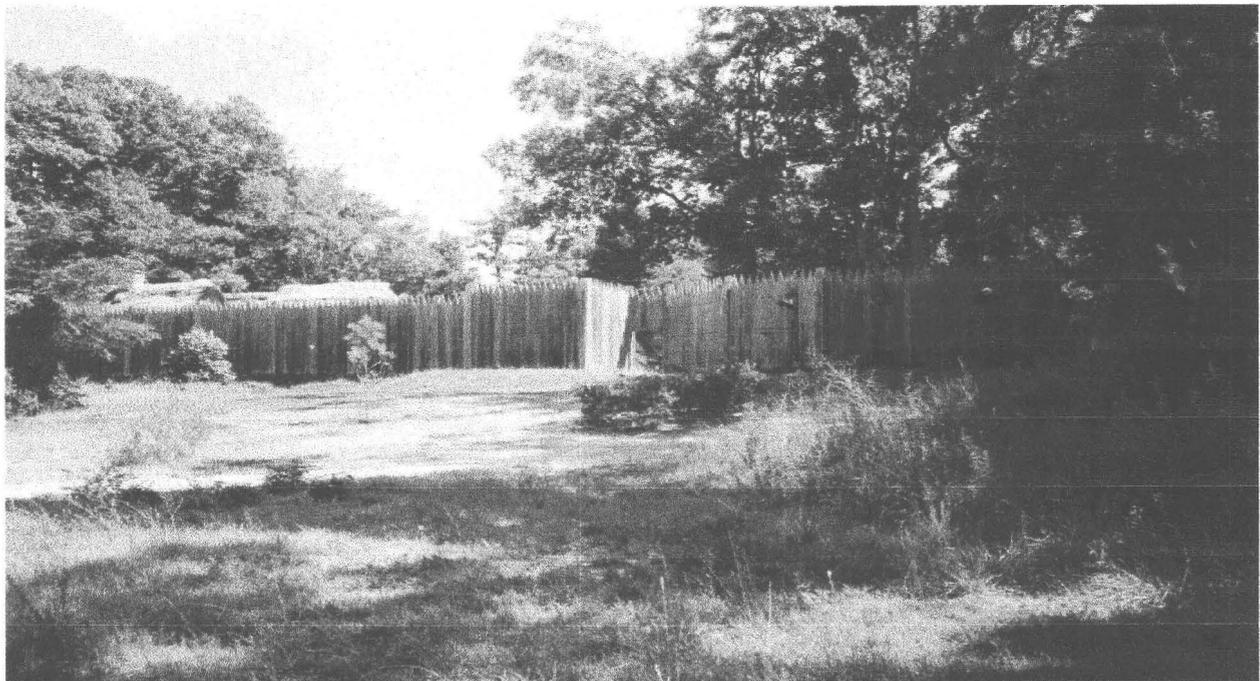

View of the project site for the proposed colonial style boat building structure. The site currently consists of a fallow area that extends to the treeline.

View of the James River. The James is located west of the project site.

View of the wooded and fallow areas located to the south and southwest of the subject site. Note the James River beyond these areas.

Fort James located east/northeast of the project site.

Impact Review

DEPARTMENT OF ENVIRONMENTAL QUALITY
DIVISION OF AIR PROGRAM COORDINATION

DOCUMENT REVIEW CHECKLIST

TO: Charles H. Ellis III

DATE: 3/12/01

DEQ-OEIA PROJECT NUMBER: 01-026S

STATE EIR FEDERAL EA/FONSI FEDERAL EIS GRANT/SCC
 SCOPING NOTICE FOR EIS & PROGRAM

PROJECT TITLE: Proposed Improvements to the Jamestown Settlement

PROJECT SPONSOR: Jamestown-Yorktown Foundation

AIR PROGRAM COORDINATION DIVISION FINDINGS:

CONCURS WITH THE FONSI CONCURS WITH THE CONSISTENCY DETERMINATION
 SEE APPLICABLE REGULATORY REQUIREMENTS NO COMMENTS

THE PROJECT SITE IS LOCATED IN A:

OZONE NONATTAINMENT AREA
 OZONE MAINTENANCE AREA
 STATE VOLATILE ORGANIC COMPOUND & NITROGEN OXIDES EMISSION CONTROL (VOC/NO_x/EC) AREA

REGULATORY REQUIREMENTS MAY APPLY TO:

CONSTRUCTION OPERATION

STATE AIR POLLUTION CONTROL BOARD REGULATIONS FOR THE CONTROL AND ABATEMENT OF AIR POLLUTION THAT MAY APPLY:

1. 9 VAC 5-40-5200 C and 9 VAC 5-40-5220 E - Stage I.
2. 9 VAC 5-40-5200 C and 9 VAC 5-40-5220 F - Stage II Vapor Recovery.
3. 9 VAC 5-40-5490 et seq. - Cut-back Asphalt Usage Restriction.

4. 9 VAC 5-40-5600 et seq. - Open Burning.
5. 9 VAC 5-50-60 et seq. - Fugitive Dust Emissions.
6. 9 VAC 5-50-130 et seq. - Odorous Emissions; applicable to the _____.
7. 9 VAC 5-50-160 et seq. - Standards of Performance for Toxic Pollutants.
8. 9 VAC 5-50-400 Subpart ____, Standards of Performance for New Stationary Sources, designates standards of performance for the _____.
9. 9 VAC 5-80-10 et seq. of the regulations - Permits for Stationary Sources.
10. 9 VAC 5-80-1700 et seq. of the regulations - Major or Modified Sources located in PSD areas. This rule may be applicable to the _____.
11. 9 VAC 5-80-2000 et seq. of the regulations - New and Modified Sources located in nonattainment areas.
12. 9 VAC 5-80-800 et seq. of the regulations - Operating Permits and Exemptions. This rule may be applicable to _____.

OTHER REQUIREMENTS (R) AND/OR CONSIDERATIONS (C):

- (C) Since the project is located in an ozone maintenance area, all reasonable precautions to limit emissions of volatile organic compounds (VOCs) and oxides of nitrogen (NOx) should be taken.

PLEASE CONTACT THE _____ OFFICE FOR ANY TECHNICAL AND/OR PERMIT ASSISTANCE.

www.rickmond.com

Conservation and Recreation's James East Watershed Office depends, in part, on the Foundation's ownership of the land for which the Plan is submitted. We agree that:

- the Foundation must either acquire the land in question from VDOT, or obtain VDOT permission to use it to construct the parking lot and/or any stormwater facilities contemplated for the Stormwater Management Plan project and the Jamestown Settlement Maintenance Building; and
- the Foundation needs to develop an alternative stormwater management plan and get it approved in case the transfer of property, or permission to use it for the intended purposes, cannot be obtained from VDOT.

With regard to the proposed Riverfront Amenities and Shipwright Building (DEQ-02-030S), you agreed that all buildings in that project would be located outside the Resource Protection Area (RPA). A screening fence would be allowed inside the Resource Protection Area, provided that the Foundation plants vegetation between it and the landward boundary of the RPA. An emergency access road to the pier would be allowed within the RPA. Also, you stated that details regarding the "wetland enhancement area" would be provided to our office and to DEQ's Tidewater Regional Office. Details that the Foundation should include in the description are all alterations planned for the existing wetland area, including any soil disturbance, and types and numbers of plants to be removed and/or planted.

These projects must be consistent with James City County's Chesapeake Bay Preservation Area program developed pursuant to the Chesapeake Bay Preservation Act of 1988 (*Virginia Code* section 10.1-2100 *et seq.*). CBLAD staff intends to work with the County as well as with the Foundation in developing ideas for open space crediting and other ways to ensure the projects' compliance with County and CBLAD rules on stormwater management.

You indicated at the meeting that the proposed maintenance building addition is to be constructed on top of pre-existing asphalt. The EIR indicates that "no trees are expected to be removed, no wetlands will be impacted, and the addition will not affect surrounding wildlife communities (page 13, section 5.0). It also includes a photograph of the building and the paved area where the addition is proposed (Appendix A). However, it is not entirely clear that no additional land area outside the paved surface will be affected by the project.

Next Steps

Jamestown-Yorktown Foundation:

1. Work with DCR to determine appropriate on-site stormwater management requirements for the proposed Theatre and Exhibit Hall project. On-site treatment, either permanent or temporary pending incorporation into the regional stormwater plan, would appear to be the best course of action in this regard. In addition:
 - (a) It will be necessary for the Foundation to own the land in question;
 - (b) The wetland area should not be used as the location of a stormwater pond;
 - (c) All construction projects must comply with stormwater requirements.
2. Work with CBLAD and consultants to develop two alternative stormwater management plans for the Settlement projects including the Maintenance building. Either alternative must meet local Chesapeake Bay Preservation Act criteria:

- (a) A plan using the property, presently owned by VDOT, that we discussed on August 7 as a conservation easement and stormwater management area; and
 - (b) A plan that does not use the property presently owned by VDOT.
3. In completing item 2 above, ensure that items 1 and 2 of DEQ's July 31 letter to the Foundation are satisfied, and take into account items 3 through 5 in developing BMP credits.
 4. Notify DEQ of completion of items 1 and 2.

Chesapeake Bay Local Assistance Department:

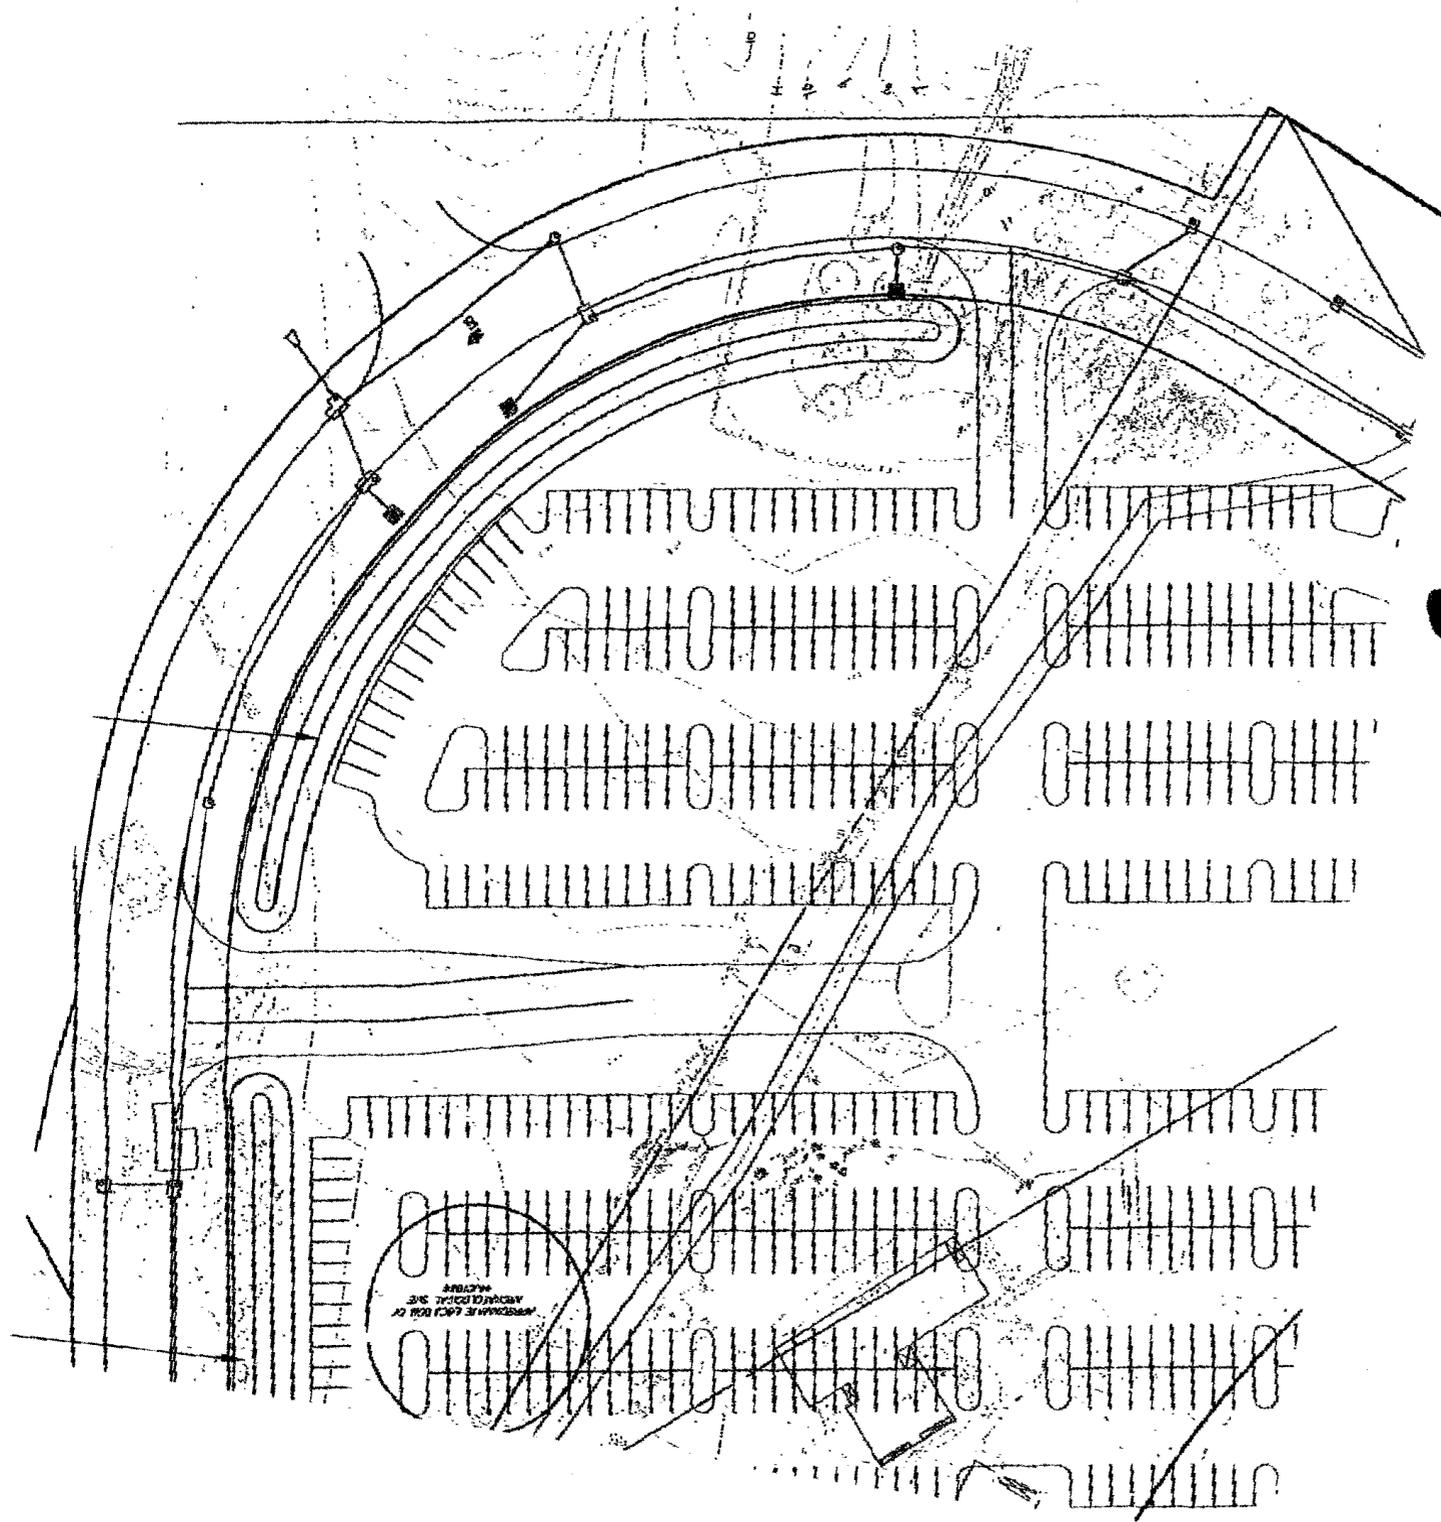

1. Render guidance and assistance as necessary to the Foundation in designing its stormwater management alternatives to meet Chesapeake Bay Preservation Act state and local requirements.
2. Serve as liaison to James City County if needed in helping the Foundation design its stormwater management requirements.
3. Determine whether and when the design meets the requirements of the Act and of the local Chesapeake Bay ordinance.
4. Notify DEQ of findings relative to the Stormwater Management Plan.

Department of Conservation and Recreation, James Watershed Office:

1. Review on-site and regional Stormwater Management Plan submissions as appropriate, and determine whether these meet specifications for approval.
2. Notify DEQ of findings.

Department of Environmental Quality:

Upon receipt of findings from CBLAD and DCR, complete the EIR process.

PROJECT NO. 01198
 PROJECT NAME _____
 SHEET NO. _____ OF _____
 CALCULATED BY KMS DATE 2/28/02
 CHECKED BY _____ DATE _____
 SCALE _____

Compute stream channel protection volume (Cpv):

Step 1. Develop site hydrologic + TR-55 Input Parameters

Condition	CN	Tc hrs	Qp 1-YR ST inches	Q 1-YR cfs
PRE-DEVELOPED	88	.08	1.8	32.52
DEVELOPED	89	.08	1.9	34.34

Step 2. Utilize MOE Method to compute storage volume

Initial Abstraction (Ia) for CN 89 is 0.222

$Ia/P = 0.222/2.3 = .08$
 $Tc = .08$ hrs

From TR-55, Exhibit 4-II
 $SU = 1000$ cm/in

$Qp/Qc = .018$

For Type I Rainfall Distribution

$Vs/Vr = 0.683 - 1.43(Qp/Qc) + 1.64(Qp/Qc)^2 - 0.804(Qp/Qc)^3$
 $Vs/Vr = 0.683 - 1.43(0.018) + 1.64(0.018)^2 - 0.804(0.018)^3$
 $Vs/Vr = 0.683 - 0.026 + 0.0 - 0.0$
 $Vs/Vr = 0.657$

$Vs = (0.657)(1.9 \text{ in})(1/12)(11.45 \text{ ac}) = 1.19 \text{ ac-ft} = 52,000 \text{ cf}$

Step 3. Define average EO Release Rate

$Qp = \frac{52,000 - 26,500 \text{ cf}}{24 \text{ hr}} = \frac{25,500 \text{ cf}}{24 \text{ hr}} = 1062.5 \text{ cfs}$

Charlie,

The project, Proposed improvements to the Jamestown Settlement (01-026S) appears to have minimal potential impacts with regards to the creation or handling of hazardous or solid waste. I have no comments to make on this project.

Hope all's well and that you didn't get drowned on your return home last Thursday.

Artie Kapell
Office of Waste Programs
DEQ, Richmond, VA

COMMENTS

Removal of the marine railway, per se, may not require authorization from this Agency. However, the use of forced water to excavate to 3 to 4 feet below the sediments may require authorization from this Agency.

MEMORANDUM

TO: Catherine Harold, CBLAD
Robert Cooper, DCR-James Watershed Office
Ethel Eaton, DHR
John Horne, James City County
Dorothy Geyer, NPS

FROM: Charlie Ellis *Charlie*

SUBJECT: Jamestown-Yorktown Foundation Projects: New Stormwater Management Master Plan, dated July 3

We have received copies of a new Stormwater Management Master Plan from the Jamestown-Yorktown Foundation. I am passing your copies along. (CBLAD and DCR received copies separately from the Foundation.)

MEMORANDUM

To: Richard White, Jamestown-Yorktown Settlement Facilities Management

cc: John T. P. Horne, Development Manager
Darryl Cook, Director of the Environmental Division

From: Wayland N. Bass, County Engineer *WNB*

Subject: 100 Ft Wide RPA Buffer at Jamestown Settlement

Date: October 17, 2000

The buffer between the pedestrian ramp to the ships and the ship view area / benches is satisfactory.

These same types of plants at this same density are to be planted to create a 100 ft wide buffer from the water as discussed on 10/11/2000 on site with you and two other staff.

The 100 ft wide buffer shall be measured from the waters edge and extend from the ship viewing area to the head of the cove toward the glass house from the viewing area.

The buffer shall be a no-mowing area. All plant material in the buffer shall be installed by November 15, 2000.

In the meantime, I will call you periodically for progress reports and to see if you have any questions. The County cannot approve plans for any additional development until the buffer is established by the Foundation and approved by the County.

If you have any questions, please do not hesitate to call me at (757) 253-6671.

Mr. Nick Konchuba
Assignment Chief
U.S. Army Corps of Engineers
Regulatory Branch
803 Front Street
Norfolk, Virginia 23510

RE: Jamestown – Yorktown Foundation
Jamestown Settlement
Wetland Delineation
ESG Project Number 6720-01

Dear Mr. Konchuba:

ESG has completed a wetland delineation on the ±15 acre Jamestown – Yorktown Foundation property located at the Jamestown Settlement and would like to request a confirmation site visit. The property is located immediately southeast of the Jamestown Ferry on Route 31 in James City County, Virginia. The site is bordered by Route 31 to the northwest, the James River to the south, and other Foundation property to the east and north. Currently the site is developed as an educational historic attraction.

Wetlands on-site were delineated based on the methodology outlined in the 1987 U.S. Army Corps of Engineers Wetland Delineation Manual (TR Y-87-1). This manual requires the independent verification of three parameters; vegetation, soils, and hydrology, to determine and delineate jurisdictional wetlands. Wetlands have been delineated in the field using pink and black striped flagging. Prior to field investigations, research on the site was performed using the National Wetland Inventory (NWI) maps, the Soil Survey for James City and York Counties and the City of Williamsburg, Virginia, aerial photos, and the U.S.G.S. Topographic Maps.

Wetlands on the property include both tidal and nontidal areas as indicated on the enclosed wetland map. Additionally, we have noted the areas that contain riprapped tidal shoreline. The wetland/upland boundaries are generally located along vegetative breaks throughout the site. In general, the upland areas are vegetated by facultative upland and facultative species. Dominant species include loblolly pine (*Pinus taeda*), white oak (*Quercus alba*), red maple (*Acer rubrum*), sweet gum (*Liquidambar styraciflua*), dogwood (*Cornus florida*), sassafras (*Sassafras albidum*),

Mr. Nick Konchuba
December 7, 2000
Page 2

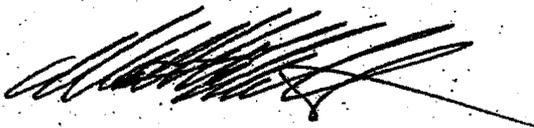

and English ivy (*Hedera helix*). Soils in the uplands are predominantly high chroma (3 and higher) sandy loams. Hydrology is not evident in these upland areas.

As previously mentioned, the nontidal wetland areas on the property are located along vegetative breaks. Dominant species observed in the wetland areas include willow oak (*Quercus phellos*), cotton wood (*Populus deltoides*), red maple (*Acer rubrum*), sweet gum (*Liquidambar styraciflua*), highbush blueberry (*Vaccinium corymbosum*), netted chain fern (*Woodwardia areolata*), and southern waxy sedge (*Carex glaucescens*). Soils in these wetland areas ranged from chroma 2, mottled, sandy clays to chroma 1 silty loams. Evidence of hydrology was observed as saturation within 12 inches of the soil surface, water stained leaves, and drainage patterns within wetland areas.

We have also delineated the tidal shoreline along the James River. The majority of the shoreline is armored in riprap, except for the upper reaches of the small cove near the boat launch.

In conclusion, the ±15 acre Jamestown Settlement Site contains approximately 0.45 acres of headwater wetland areas and approximately 0.02 acres of tidal wetlands. The remainder of the site boundary along the James River is riprapped tidal shoreline. The wetland limits shown on this map have been surveyed in conjunction with the boundary survey of the site. At this time we are requesting your confirmation of our delineation. We have included a vicinity map and completed data station forms for your use. Please contact me to schedule an on-site inspection of this property to confirm this delineation.

Sincerely,

Matthew Roth
Ecologist

Williamsburg, VA. 23187

2. Authorized Agent:

Environmental Specialties Group Inc.
729 Thimble Shoals Boulevard, Suite 1B
Newport News, VA 23606-4248

3. Address of Job Site:

At the end of Jamestown Road (Route 31).

4. Project Description:

Verification of a consultants wetland delineation on a 15 acre parcel.

5. Findings

Robert Berg of my staff met Matt Roth with Environmental Specialties Group, Inc. on the property described above on March 1, 2001. The wetlands delineation as flagged on site and roughly shown on the site plan entitled "Wetland Delineation, Jamestown Settlement, James City County, Virginia" and dated 12/5/00 is hereby verified for a period of 5 years from the date of this letter unless new information warrants revision of the delineation prior to the expiration date. Our basis for this determination is the application of the Corps' 1987 Wetland Delineation Manual and the positive indicators of wetland hydrology, hydric soils, and hydrophytic vegetation. The wetland is a waters of the United States and is part of a tributary system to interstate waters (33 CFR 328.3(a)).

This letter does not authorize any impacts to jurisdictional wetlands on this property. Any mechanized landclearing (such as with a bulldozer or rootrake) and/or filling in the jurisdictional areas on this property will require a Department of the Army permit prior to such activities occurring. Should all wetland impacts be avoided for this proposal, no permit would be required from our office.

This wetland delineation verification does not relieve your responsibility to comply with local requirements pursuant to the Chesapeake Bay Preservation Act (CBPA), nor does it supercede local government authority and responsibilities pursuant to the Act. You should contact your local government before you begin work to find out how the CBPA applies to your project.

Dear Mr. Wanner:

The Department of Environmental Quality solicits your comments on the attached Environmental Impact Report for the referenced project. Virginia Code § 10.1-1188 requires each state agency to prepare a report for any construction or acquisition for construction project that exceeds \$100,000. DEQ must review the project and forward comments to the Governor within 60 days of receiving the report. Virginia Code § 15.2-2202 provides an opportunity for review and comment by local officials as we conduct our review. In order for us to complete our comments in a timely manner I request that you return your comments to us by **March 20, 2002**. Please return comments to:

**Virginia Department of Environmental Quality
Office of Environmental Impact Review
Post Office Box 10009
Richmond, Virginia 23240-0009**

If you wish to comment but cannot return comments by the date specified, please contact me at (804) 698-4135 prior to the deadline. If possible, we will extend the date for comment to accommodate your special needs. This EIR has also been circulated to State agencies and to the Hampton Roads Planning District Commission for review and comment.

Thank you for your attention to this matter.

Sincerely,

Anne B. Newsom

Re: Jamestown Settlement – Riverfront Development Demolition and Reconstruction

Dear Ms. Galavotti:

The Department of Conservation and Recreation's Division of Natural Heritage (DCR) has searched its Biological and Conservation Data System (BCD) for occurrences of natural heritage resources from the area outlined on the submitted map. Natural heritage resources are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geologic formations.

BCD documents the presence of natural heritage resources in the project area. However, due to the scope of the activity and the distance to the resources, we do not anticipate that this project will adversely impact these natural heritage resources. In addition, our files do not indicate the presence of any State Natural Area Preserves under DCR's jurisdiction in the project vicinity.

Under a Memorandum of Agreement established between the Virginia Department of Agriculture and Consumer Services (VDACS) and the Virginia Department of Conservation and Recreation (DCR), DCR represents VDACS in comments regarding potential impacts on state-listed threatened and endangered plant and insect species. The current activity will not affect any documented state-listed plants or insects.

The absence of data may indicate that the project area has not been surveyed, rather than confirm that the area lacks natural heritage resources. DCR's Biological and Conservation Data System is constantly growing and revised. Please contact DCR for an update on this natural heritage information if a significant amount of time passes before it is utilized.

A fee of \$50.00 has been assessed for the service of providing this information. Please find enclosed an invoice for that amount. Please return one copy of the invoice along with your remittance made payable to the Treasurer of Virginia, Department of Conservation and

Recreation, 203 Governor Street, Suite 402, Richmond, VA 23219, ATTN: Cashier. Payment is due within thirty days of the invoice date.

Thank you for the opportunity to comment on this project.

Sincerely,

S. René Hypes

**RE: Stormwater Management Master Plan
CBLAD Project Review No. SSPR-JYF-05(E)-01**

Dear Mr. White:

We have reviewed a revised conceptual stormwater plan for the proposed improvements at the Jamestown Settlement, which was sent from Rickmond Engineering, Inc. We discussed the plan with Robert Cooper at the Department of Conservation and Recreation. In general, the plan appears conceptually reasonable and provided that the final design meets the Performance Criteria of the Chesapeake Bay Preservation Area Designation and Management Regulations as implemented through James City County's Bay Act Ordinance it would be consistent with the Chesapeake Bay Preservation Act.

The proposed plan relies on ground infiltration for treatment of stormwater. As currently planned, a series of underground storm chambers would be utilized in combination with dry swales (JCC-E2), which is similar to the water quality swale design in the Virginia Stormwater Management Handbook. Based upon the soils information provided, it does not appear that ground water will be a limiting factor. However, suitable soils for infiltration are non consistent across the site. It will be necessary to conduct site-specific soil investigations to ensure that adequate permeability exists for the infiltration BMPs proposed. Otherwise the soils beneath the chambers will need to be engineered to achieve the requisite permeability.

We discussed some additional alternatives with Donald Jennings of Rickmond in a conference call on February 20, 2003. We suggested the possibility of biofiltration techniques. This would involve some temporary above ground storage, which he indicated was not desirable or compatible with facility layout and movement of people. We also discussed another subsurface alternative, which would use a trench drain system in lieu of the chambers. Regardless of which design is chosen, perforated pipe should be used for conveyances to the BMPs, where possible, to promote additional infiltration.

We discussed switching the position of the forebay with the upgradient underground storage chambers particularly since this will collect runoff from the large employee parking lot. In

Mr. White
February 25, 2003
Page 2 of 2

addition, the parking lots should have oil/grit separators as a form of pretreatment. This will extend the longevity of the BMPs as well as extend the time between maintenance of the BMPs.

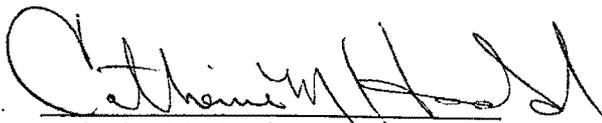

The plan should incorporate pre-treatment upgradient of the BMPs. While there are several approaches for this, Minimum Standard 3.10E in the Virginia Stormwater Management Handbook addresses how the underground chambers can be utilized for pretreatment. The BMPs should not be set up in series, because that would result in the most BMP being overwhelmed from the volume of runoff passing through the upstream BMPs.

On previous occasions, we indicated that steps should be taken to reduce the amount of impervious cover on the site, as required by the performance criteria in the Bay Act Regulations. These comments were in response to the expansive parking areas shown on previous iterations of the master plan. The consultants and Foundation staff have indicated that the 212 proposed parking spaces are necessary for the employee parking area. Therefore, we highly recommend the use of permeable surfaces in the parking lot areas. This will address the performance criteria in addition to promoting infiltration and lessening runoff velocities and volumes. To further promote source control, we recommend the use of depressed bioretention areas in the parking lots instead of raised planting islands.

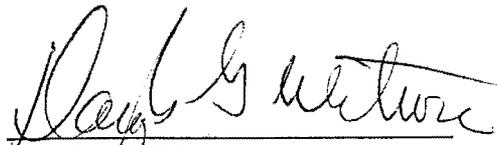

We look forward to reviewing the final design plans for this project. You are also welcome to submit draft plans as you progress with the design. Please be sure to submit final plans to the Department of Conservation and Recreation for their evaluation and approvals in accordance with the Virginia Erosion and Sediment Control Law and Virginia Stormwater Management Act.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

RE: Jamestown-Yorktown Foundation-Stormwater Management Master Plan

Dear Mr. Ellis:

On February 20, 2003 Catherine Harold and myself reviewed the revised conceptual stormwater management master plan for the proposed improvements at the Jamestown Settlement. Based on this review and additional alternatives discussed with Mr. Jennings of Rickmond Engineering during a conference call, the Department of Conservation and Recreation is in agreement with this conceptual plan. Basically, the plan proposed the used of infiltration as the main practice for meeting the state's water quality requirements. During the conference call, the consultant agreed with DCR and CBLAD that if the existing soils were not suitable then the necessary material would be transported in to meet infiltration design specifications. ?

The approval of the conceptual plan by this agency is only a first step in the process. Plans must be submitted to DCR for a land disturbance permit. Stormwater and Erosion and Sediment control plans must be approved before any land disturbance activity can begin.

If you need any further help in this matter please contact either Robert E. Cooper at (804)786-1359 or David Beale at (804) 443-8237.

Sincerely:

Robert E. Cooper, P.E.

MEMORANDUM

DATE: 24 May, 2001

TO: Ellie Irons, Department of Environmental Quality
Derral Jones/BAW

FROM: Derral Jones, Planning Bureau Manager

SUBJECT: Revised Comments for DEQ#01-026S: Proposed Improvements to the Jamestown Settlement, James City County

The Department of Conservation and Recreation (DCR) has searched its Biological and Conservation Data System (BCD) for occurrences of natural heritage resources from the area outlined on the submitted map. Natural heritage resources are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geologic formations.

After a careful review of the submitted photos and site plans, DCR would like to revise initial comments made on 6 December 2000. If suitable habitat is present, small whorled pogonia (*Isotria medeoloides*, G2G3/S2/LT/LE) could occur on site. Small whorled pogonia grows in a variety of woodland habitats in Virginia, but tends to favor mid-aged woodland habitats on gently north or northeast facing slopes often within small draws. It is quite natural for plants of this species to remain dormant in the soil for long periods of time. Direct destruction as well as habitat loss and alteration are principle reasons for the species' decline (Ware, 1991). Please note that small whorled pogonia is currently classified by the United States Fish & Wildlife Service (USFWS) and as an endangered species by the Virginia Department of Agriculture and Consumer Services (VDACS).

The Virginia Department of Agriculture and Consumer Services (VDACS), which has regulatory authority to conserve rare and endangered plant and insect species through the Virginia Endangered Plant and Insect Species Act, has established a Memorandum of Agreement with the Virginia Department of Conservation and Recreation (DCR). Under this agreement, DCR in consultation with VDACS, represents VDACS in its comments and recommendations regarding the potential impact of reviewed projects or activities on state-listed plant and insect species. Since it has been determined that this project or activity may impact small whorled pogonia a state-protected plant, VDACS will respond directly to ensure compliance with Virginia's Endangered Plant and Insect Species Act. Further correspondence regarding the potential impacts of this project or activity on state-listed plant and insect species should be directed to VDACS.

Any absence of data may indicate that the project area has not been surveyed, rather than confirm that the area lacks natural heritage resources. New and updated information is continually added to BCD. Please contact DCR for an update on this natural heritage information if a significant amount of time passes before it is utilized.

For soil and water conservation issues on this project, be aware that state agency projects that involve a land-disturbing activity of 10,000 square feet or more must prepare a project-specific Erosion and Sediment Control plan for review and approval by DCR's Division of Soil and Water Conservation (DSWC). An approved plan is required prior to initiation of any land-disturbing activity at the project site. All plans must be prepared in accordance with the current version of the *Virginia Erosion & Sediment Control Handbook*, Virginia Erosion & Sediment Control Law (VESCL) and Regulations (VESCR). *Note that projects undertaken in Chesapeake Bay Preservation Areas (CBPA) may be subject to requirements that are more stringent. The agency is encouraged to consult with the Chesapeake Bay Local Assistance Department (CBLAD) and/or the appropriate local jurisdiction to confirm parallel ESC plan requirements under the Chesapeake Bay Preservation Act.* ESC plans should be submitted directly to the DCR Watershed Office that serves the area where the project will be undertaken. [Reference: VESCL §10.1-560, §10.1-564; VESCR §4VAC50-30-30, §4VAC50-30-100]

Similarly, state agency projects that involve a land use conversion activity of 1 acre or more must prepare a project-specific SWM plan for review and approval by DCR's DSWC. An approved plan is required prior to initiation of any regulated activities at the project site. All plans must be prepared in accordance with the current version of the Virginia Stormwater Management Law (VSWML) and Regulations (VSWMR). *Note that projects undertaken in Chesapeake Bay Preservation Areas (CBPA) may be subject to requirements that are more stringent. The agency is encouraged to consult with the Chesapeake Bay Local Assistance Department (CBLAD) and/or the appropriate local jurisdiction to confirm parallel SWM plan requirements under the Chesapeake Bay Preservation Act.* It is recommended that this project be considered with any other existing or proposed land use conversion or expansion plans for the property to adequately address the cumulative impacts on the receiving drainage or environmental systems, as well as, to identify the most appropriate strategy for reducing the nonpoint source pollution from the developed and developing areas of the site. The agency may submit a draft plan or other preliminary information to DCR's DSWC for review and assistance in identifying specific practices, regional strategies, and/or regulatory requirements that may apply to this project. Requests for assistance and/or plans should be directed to the DCR Watershed Office that serves the area where the project will be undertaken. [Reference: VSWML §10.1-603.5; VSWMR §4VAC.3-20-210 - 245]

For use in directing project-specific ESC and SWM plans and requests for assistance to the appropriate DCR Watershed Office, a copy of the guidance document *DCR Urban Programs Contact Information*, is available <http://www.dcr.state.va.us/sw/e&s.htm>

The maps in the EIR identify the settlement as the Jamestown Settlement Park. The use of "State Park" implies the site is a unit of DCR's State Park System. To prevent such confusion, a new nomenclature should be used for identifying the settlement. Perhaps, just the removal of the label "state" from the name, leaving Jamestown Settlement Park, would suffice.

Thank you for the opportunity to comment on this project.

Kim Marbain, USFWS
Keith Tignor, VDACS

Dear Ms Irons:

This letter responds to your March 6, 2003, letter requesting the status of VDOT's discussions with the Jamestown-Yorktown Foundation concerning their use of land in VDOT's right-of-way. After speaking with Mr. Jeff Lunsford from the Foundation and Mr. John Neal (VDOT's Hampton Roads District Construction Engineer) I was able to determine that the Foundation no longer has need of the VDOT right-of-way in order to create a conservation easement. However, the Foundation continues to have a need for portions of the VDOT right-of-way in order to construct parking facilities and buildings. Mr. Neal's office is currently in the process of negotiating the terms of a right-of-way lease, and possible transfer, with the Foundation that will allow the Foundation to proceed with their proposed projects.

If you have any questions, please contact me at (804) 786-6678 should you have any additional questions.

Sincerely,

**RE: Stormwater Management Master Plan
CBLAD Project Review No. SSPR-JYF-05(E)-01**

Dear Mr. White:

We have reviewed a revised conceptual stormwater plan for the proposed improvements at the Jamestown Settlement, which was sent from Rickmond Engineering, Inc. We discussed the plan with Robert Cooper at the Department of Conservation and Recreation. In general, the plan appears conceptually reasonable and provided that the final design meets the Performance Criteria of the Chesapeake Bay Preservation Area Designation and Management Regulations as implemented through James City County's Bay Act Ordinance it would be consistent with the Chesapeake Bay Preservation Act.

The proposed plan relies on ground infiltration for treatment of stormwater. As currently planned, a series of underground storm chambers would be utilized in combination with dry swales (JCC-E2), which is similar to the water quality swale design in the Virginia Stormwater Management Handbook. Based upon the soils information provided, it does not appear that ground water will be a limiting factor. However, suitable soils for infiltration are non consistent across the site. It will be necessary to conduct site-specific soil investigations to ensure that adequate permeability exists for the infiltration BMPs proposed. Otherwise the soils beneath the chambers will need to be engineered to achieve the requisite permeability.

We discussed some additional alternatives with Donald Jennings of Rickmond in a conference call on February 20, 2003. We suggested the possibility of biofiltration techniques. This would involve some temporary above ground storage, which he indicated was not desirable or compatible with facility layout and movement of people. We also discussed another subsurface alternative, which would use a trench drain system in lieu of the chambers. Regardless of which design is chosen, perforated pipe should be used for conveyances to the BMPs, where possible, to promote additional infiltration.

We discussed switching the position of the forebay with the upgradient underground storage chambers particularly since this will collect runoff from the large employee parking lot. In

Mr. White
February 25, 2003
Page 2 of 2

addition, the parking lots should have oil/grit separators as a form of pretreatment. This will extend the longevity of the BMPs as well as extend the time between maintenance of the BMPs.

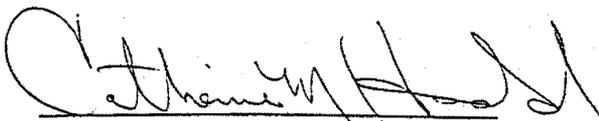

The plan should incorporate pre-treatment upgradient of the BMPs. While there are several approaches for this, Minimum Standard 3.10E in the Virginia Stormwater Management Handbook addresses how the underground chambers can be utilized for pretreatment. The BMPs should not be set up in series, because that would result in the most BMP being overwhelmed from the volume of runoff passing through the upstream BMPs.

On previous occasions, we indicated that steps should be taken to reduce the amount of impervious cover on the site, as required by the performance criteria in the Bay Act Regulations. These comments were in response to the expansive parking areas shown on previous iterations of the master plan. The consultants and Foundation staff have indicated that the 212 proposed parking spaces are necessary for the employee parking area. Therefore, we highly recommend the use of permeable surfaces in the parking lot areas. This will address the performance criteria in addition to promoting infiltration and lessening runoff velocities and volumes. To further promote source control, we recommend the use of depressed bioretention areas in the parking lots instead of raised planting islands.

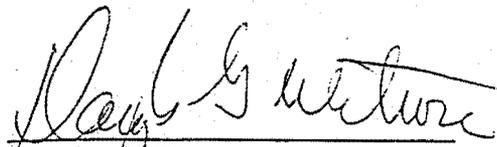

We look forward to reviewing the final design plans for this project. You are also welcome to submit draft plans as you progress with the design. Please be sure to submit final plans to the Department of Conservation and Recreation for their evaluation and approvals in accordance with the Virginia Erosion and Sediment Control Law and Virginia Stormwater Management Act.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

**RE: Jamestown: SWM Improvements, and Boardwalk (425-16474)
CBLAD Project Review No. SSPR-JYF-05(C)-01**

Dear Ms. Irons:

We were recently copied on a letter addressed to you (dated 7/1/02) from the Jamestown-Yorktown Foundation and have reviewed the Jamestown Settlement's working drawings for the Stormwater Management Improvements. We have a number of concerns with the proposed stormwater management plan that remain outstanding as well as some new concerns with the details of the plan. Several of these concerns have been repeatedly raised in earlier correspondence, phone discussions, and meetings, most recently in our letter to you dated June 5, 2002. I believe the Department of Conservation and Recreation may also have concerns with the proposed stormwater plan as well. You may recall that we discussed some of these issues at our meeting with the Foundation held in our office on June 11, 2002. Because many of the proposed projects rely on providing satisfactory stormwater management for the overall site, resolution of the stormwater plan is the critical path for approval of these other projects.

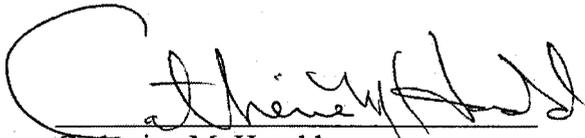

Some of the concerns we have with the BMP are with the establishment of a conservation easement on the open space area, accounting issues with the BMP credits claimed, an adequate channel analysis below the BMP outfall, whether any trees will be cleared in the area upslope of the timber wall, a hydraulic routing of the BMP, how runoff from impervious surfaces are to be conveyed to the BMP that is presumably serving these

Ms. Irons
July 25, 2002
Page 2 of 2

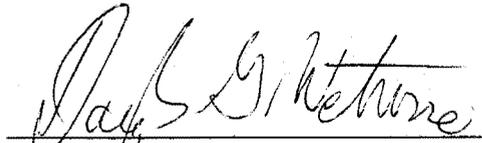

areas, and whether the permitting agencies have concerns with the placement of a BMP in a wetland area.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

RE: Jamestown: Entrance Plaza/Parking Lot Renovation (425-16133)
Jamestown: SWM Improvements, and Boardwalk (425-16474)
Jamestown: Riverfront Amenities/Shipwright Building (425-16469)
Jamestown: Maintenance Building Renovation/Expansion (425-16473)
Jamestown: Interpretive Pathway (425-01425-04)

CBLAD Project Review No. SSPR-JYF-05(B)-01

Dear Ms. Irons:

We were recently copied on two letters (dated 5/14/02, 4/21/02) addressed to you from the Jamestown-Yorktown Foundation and have reviewed the Jamestown Settlement Master Plan (dated 4/22/02) and the revised Stormwater Management Master Plan (dated 5/2/02) for the Jamestown-Yorktown Settlement sent to us with these letters. The following is a discussion of the status of these projects with respect to consistency with the Chesapeake Bay Preservation Area Designation and Management Regulations (Regulations). We have several remaining concerns with the proposed plans. Most of these concerns were raised in earlier correspondence, phone discussions, and meetings. For purposes of clarity between our former comments and these it should be noted that the drainage areas (DAs) have been redrawn and renumbered accordingly. Former DAs 1, 2, and 3 are now group together as drainage area 4. Former drainage areas 4, 5, and portions of former drainage areas 2 and 3 are now grouped together as drainage area 5. The parking lot and entrance plaza are now denoted and numbered as drainage areas 1, 2, and 3.

Entrance Plaza/Parking Lot Renovation:

The revised stormwater master plan indicates that the parking lot and entry plaza areas (DAs 1, 2, and 3) are to be addressed separately from the master plan. Attached are comments we made in a letter dated March 27, 2002 to Rickmond Engineering, Inc. regarding the stormwater

management plan for the parking lot and entry plaza. The revised stormwater management plan indicates that 100 percent of the parking lot and entry plaza will be served by the 3 dry swales. **The full credit (10 BMP points) for these BMPs can be applied provided that pretreatment is incorporated into the design (see CBLAD March 27, 2002 letter attached). Provided this condition is met, the project would be consistent with the Regulations.**

SWM Improvements, and Boardwalk, Riverfront Amenities/Shipwright Building, Maintenance Building Renovation/Expansion, Interpretive Pathway:

These four projects are tied to the stormwater management master plan, for which we have remaining concerns. Other concerns have also not been addressed. For example, the "group area" denoted in the Resource Protection Area (RPA) is not water-dependent and needs to be relocated out of the RPA. Also, grading for the ship maintenance build extends into the RPA. The design of the riverfront interpretive pathway does not reflect the changes per the last correspondence between CBLAD and the Foundation. The Building should be shifted back out of the RPA. The concession area ("shop") is still within the RPA and needs to be shifted back out of the RPA as it is not water-dependent. **These encroachments need to be removed before the projects are consistent with the Regulations.**

The proposed open space area has been reduced in size since the last stormwater management plan we reviewed. The reduction appears to be due to encroachments of the employee parking lot, an amphitheater, and boardwalk into this area. The following describes several concerns we have regarding the use of this area as credit towards the 10-point BMP Credits needed for the project:

- The County's BMP guidance for the use of open space towards this credit requires that a conservation easement or other enforceable instrument that ensures perpetual protection of the area. From the mapping provided it appears that this area is not within the Foundation's property boundaries. **Without a permanent protective mechanism this area cannot be credited towards the needed BMP credits.**
- To receive open space BMP credit the open space area cannot be disturbed during project construction (i.e., cleared or graded). It appears the conservation area also includes areas that would be disturbed by the construction of a substantial boardwalk through the area. Also, the plans indicate a BMP design detail, which will require alteration of the open space area, potentially including the wetland for the requisite plunge pool, micropool and outlet structure. **The disturbed areas including the boardwalk, and BMP area should not be counted in the area measure of the conservation area if the area will be disturbed.**

We have several concerns with how the water calculations were prepared, which are as follows:

- The master plan indicates that the total site area is 35.69 acres. For purposes of the calculations, only DAs 4 and 5 (24 acres) were considered as the site area. We have no problem with separating out the DAs 1, 2, and 3 (entrance plaza and parking lot) from DAs 4 and 5, provided that DAs 1, 2, and 3 also achieve 10 BMP points separately. The calculations indicate that the fraction of the site served by BMP #B-3 is 0.74 (14.72/19.89). Assuming that 24 acres is the site area, the denominator

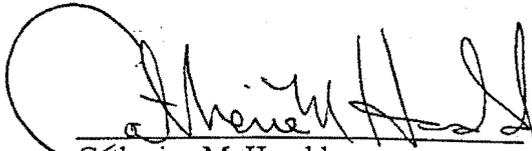

(19.89) in this equation appears to have been derived at by subtracting out the conservation area. For this to be a true fraction **both sides of the equation should include the conservation area.** Thus, the fraction of the site served would be 0.61 (14.72/24) yielding 6.1 BMP points.

Given the need for additional BMP credit and the numerous concerns with use of an area for open space credit that is currently not on the Jamestown-Yorktown Foundation's property, we suggest that the Foundation explore the idea of making easement arrangements off site. This would involve the payment of an off-set fee such that James City County or an approved land trust may purchase developable land as natural open space off-site. We would be available to meet with the Foundation, James City County and any other party to discuss the possibilities regarding these alternatives.

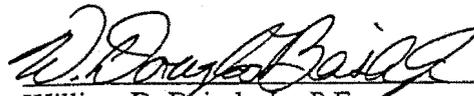

Another possibility for achieving additional BMP credits would be to explore the idea of providing another structural BMP. There appears to be a drainage swale between the ship maintenance facility and wooded amphitheater that might serve both of these areas the nearby parking, concession stand, and the other amphitheater. The Foundation's drainage consultant should investigate whether this would be feasible from a water quality treatment perspective and whether there would be any constraints to using this area for this purpose.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

RE: Jamestown Settlement Proposed Improvements EIR
CBLAD Project Review No. SSPR-JYF-03-01

Dear Mr. Ellis:

As you requested, we have reviewed the Environmental Impact Report (EIR) for the proposed improvements at the Jamestown Settlement. The following are our comments and recommendations.

As described in the EIR, it does not appear that the proposed improvements will add impervious surfaces to the site. However, the Site Master Plan indicates that a number of planned improvements may add additional impervious surfaces. If either the immediate planned improvements (addressed in the EIR) or the master plan elements to be constructed prior to the 400th anniversary celebration will involve redevelopment or new development of impervious surfaces (the boardwalk would not be considered impervious) the projects will need to comply with the performance standards of the Chesapeake Bay Preservation Area Designation and Management Regulations (Regulations) including the stormwater management criteria.

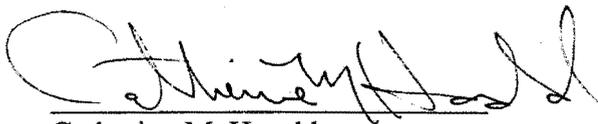

We recommend that the Foundation address the stormwater quality requirements early in the planning stages so that the master plan can accommodate BMP features and perhaps maximize the efficiencies of BMPs that may be required. Also, since much of the landscaping is planned now it may be possible to incorporate soft vegetative BMPs into the plans at this point in time. We are available to meet with the Jamestown-Yorktown

Mr. Ellis

Re: Jamestown Settlement Master Plan Addendum
Entry Plaza and Parking Lot Improvements/Realignment of Route 356
Stormwater Management System
DEQ Project Numbers 01-026-S/01-039-S
DHR File Numbers 2001-0641/2001-0436/2001-0478

Dear Mr. Ellis:

Thank you for requesting our comments on the Jamestown Settlement Master Plan Addendum and accompanying maps.

We are pleased to see that the revised map dated July 5, 2002 addresses several issues of concern to us. The new alignment of Route 359 allows improved access to the Colonial Parkway. Further, there appears to be room for a 50-foot buffer along the outer edge of Route 359. We requested review of any landscape design plans in February of 2001, however, and we have not yet received any more detailed plans on the landscape design for the parking lot other than those showing the alignment of Route 359 and the proposed location of parking spaces and bus drop off points. In order to achieve the protection of a significant historic property, we continue to recommend a fifty foot buffer supplemented by appropriate vegetative planting to preserve the viewshed from the Colonial Parkway along Route 359. In addition, as we discussed in our on-site meeting with the Foundation staff on May 17, 2001, we continue to recommend that consideration be given to green-space within the parking lot in order to reduce the visual effects of the parking lot on the Parkway as it crosses Powhatan Creek. We encourage the Foundation to consider archaeological sites, landscape

features and adjacent historic properties in determining the final alignment and design of Route 359 and the final landscape plan for the entry plaza and parking lot.

One archeological site, 44JC1084, has been identified within the footprint of the parking lot. An Evaluation (Phase II) archeological survey of that site has been completed to determine conclusively the site's significance and we are currently reviewing the report. Our staff are willing to advise the Foundation on appropriate treatment, if the site is found eligible.

No survey has yet been conducted, however, for the proposed the stormwater management plan for the Settlement. We continue to recommend a survey to identify the full range of historic properties that may be affected by the plan, including architectural, landscape and archaeological resources. management plan. The survey should be conducted by qualified professionals in accordance with our state *Guidelines For Conducting Cultural Resource Survey In Virginia: Additional Guidance for the Implementation of the Federal Standards Entitled Archaeology and Historic Preservation: Secretary of the Interior's Standards and Guidelines (48 FR 44742, September 29, 1983) 1999, rev. 2000.*

Finally, as we have previously stated, if a Corps of Engineers permit is required for the proposed facilities, further consultation with our Department and other consulting parties will be needed in accordance with Section 106 of the National Historic Preservation Act of 1966, as amended through 1992.

If you have any questions or if we can be of any further assistance do not hesitate to contact me at (804) 367-2323 ext. 140 or lrichards@dhr.state.va.us.

Sincerely,

Lily A. Richards

Re: Proposed Improvements to Jamestown Settlement
DEQ Project Number 01-026-S
DHR File Number 2001-0641

Dear Mr. Ellis:

This letter supercedes any previous letter from the DHR regarding the referenced project. We have reviewed project and offer the following comments:

- The DHR continues to recommend a cultural resources survey of the project area. This survey should be conducted by qualified professionals in accordance with the federal standards entitled *Archeology and Historic Preservation: Secretary of the Interior's Standards and Guidelines* (48 FR 44716-44742, September 29, 1983) and our state *Guidelines for Preparing Identification and Evaluation Reports for Submission Pursuant to Sections 106 and 110, National Historic Preservation Act, Environmental Impact Reports of State Agencies, Virginia Appropriations Act, 1992 Session Amendments* (June 1992). The survey should identify the full range of effects of the project on historic properties present in the project's area of potential effects, including architectural, archaeological, and historic landscape resources. This survey should be conducted prior to any ground breaking activities (please note that this work will require a permit to conduct archaeological investigations on state lands which can be obtained through our office).
- Please understand that if the proposed storm water facilities are located in a wetlands area, a permit from the US Army Corps of Engineers will be required. Issuance of a permit is an undertaking subject to Section 106 of the National Historic Preservation Act of 1966, as amended through 1992. All Corps permit actions, including non-reporting nationwide permits, require consideration of historic properties (condition 12). Any discussions with the Corps or requests for verification of nationwide status should include information provided by DHR and the National Park Service on the archeological sensitivity of the area and the presence of the CNHP. In addition, the Corps' Area of Potential Effect (APE) may include other projects currently planned by the Foundation. If this is the case, then the Corps may have to consider the cumulative effects of these projects with concern to historic properties. Should the National Park Service request consulting party status in the 106 process, the Service would then have the opportunity to express its views on the cumulative effects on the CNHP of all Foundation projects located within the Corps' APE.

MEMORANDUM

TO: Charles H. Ellis III, Environmental Program Planner; Office of Environmental Impact Review

FROM: Dave Davis, Environmental Specialist II; Office of Water Permit Programs

SUBJECT: Environmental Impact Review; Proposed Improvements to Jamestown Settlement
Jamestown-Yorktown Foundation
James City County, Virginia
Project No. 01-026S

DATE: 9 March 2001

I have reviewed the information provided by Environmental Specialties Group, Inc. concerning the above-referenced project. Site activities include the demolition of an existing marine railway, construction of a wetland educational boardwalk, drainage improvements to the Native American Village and the fort areas, and general landscaping and soil stabilization improvements throughout the site.

The EIR states that nontidal, forested wetlands were delineated in depressional areas on the site. Additionally, vegetated tidal wetlands occur in the vicinity of the marine railway that is proposed for demolition. The report states that a delineation confirmation request has been submitted to the U.S. Army Corps of Engineers (the Corps). The construction of a wetland educational boardwalk will occur in the wetland areas, but the report does not quantify the extent of proposed impacts. Once the Corps confirms the wetland delineation and proposed wetland impacts are quantified, then we can determine if a Virginia Water Protection Permit will be required for the proposed activities.

Direct and non-direct impacts to wetlands in the vicinity of the project site should be avoided and minimized to the extent practicable. It is also suggested that vegetated buffers around wetland areas be left intact to protect water quality. This program also encourages the use of erosion and sediment control measures and careful construction practices to minimize temporary impacts to State waters during site construction activities.

Thank you for the opportunity to comment on this project.

Director

Francis L. Daniel
Tidewater Regional Director

MEMORANDUM

TO: Charles H. Ellis, III - Office of Environmental Impact Review

FROM: Sheri Kattan - Tidewater Regional Office

DATE: March 28, 2001

SUBJECT: Review of the Environmental Impact Report for "Proposed Improvements to the Jamestown Settlement", Jamestown-Yorktown Foundation, Project Number 01-026S.

The Tidewater Regional Office has completed its review of this Environmental Impact Report (EIR) and we are submitting the following comments. Thank you for the opportunity to participate in the review process.

WETLANDS/WATER QUALITY: It is not clear from the EIR drawings where the marine railway is located with respect to the vegetated emergent wetlands. If vegetated or nonvegetated wetlands are to be disturbed during the marine railway removal process, then submittal of a joint permit application to the Virginia Marine Resources Commission (VMRC) may be required for dissemination to the state, federal and local regulatory agencies for review. Use of turbidity curtains and silt fences to protect wetlands and State waters from siltation is strongly encouraged. The nontidal wetland areas on site appear to have a hydrologic connection to surface water and will likely be considered jurisdictional by the Army Corps of Engineers. The proposed open-pile boardwalk in these areas will, therefore, require submittal of a joint permit application to VMRC for dissemination to the appropriate state and federal regulatory agencies for review. The boardwalk should be configured to avoid and minimize impacts to the wetlands and the sensitive vernal pond habitat to the maximum extent practicable. As stated in the EIR, surveys for small whorled begonia and sensitive joint-vetch should be conducted to determine if these species are present in the areas proposed for improvement. It is suggested that the marine railway work be performed outside the breeding season for the State sensitive great egret to avoid adverse impacts to the designated Species of Concern.

Addition of stormwater treatment ponds is an excellent way to reduce pollutant and sediment loadings to the James River and adjacent wetlands, and we encourage the Foundation's efforts in this area.

All construction projects must incorporate proper erosion control measures as outlined in the most recent edition of the DCR's "The Virginia Erosion and Sediment Control Handbook". Precautions should be taken to preclude the entry of any contaminants or sediment into adjacent wetlands and waters of the State.

The master plan included in the EIR includes a Marine Ecology Area that will result in additional work/impacts in State waters. Since this area is included in the 15-acre covered by the EIR, shouldn't these impacts be assessed as well?

STORM WATER: As the project proposes impacts to 5 or more acres of land surface, a Stormwater General Permit for Construction Activities (9 VAC 25-180-10 et. seq.) will be required. This permit will require implementation of a Stormwater Pollution Prevention Plan.

GROUND WATER: No comments were solicited from our Groundwater Program staff as impacts to groundwater are not anticipated.

UNDERGROUND STORAGE TANKS: No comments were solicited from our Underground Storage Tank (UST) Program staff as impacts from USTs are not anticipated.

WASTE: All waste generated during any construction or demolition activities must be handled and disposed in accordance with all applicable federal, state, and local environmental regulations.

AIR: No comments or concerns were generated from our Air Program staff during review of this EIR.

Re: Proposed Improvements to the
Jamestown Settlement
DEQ #01-026S (ENV:GEN)

Dear Mr. Ellis:

Pursuant to your request of February 15, 2000, the staff of the Hampton Roads Planning District Commission has reviewed the Environmental Impact Review for the Proposed Improvements to the Jamestown Settlement. We have contacted James City County concerning the project.

Based on this review, James City County has identified some outstanding concerns. These concerns pertain to the project's Stormwater Management Master Plan and the County's requirements for Chesapeake Bay Preservation Areas. A copy of a letter outlining the County's outstanding issues with the project is attached. It is advised that the applicant work with the County to resolve these issues. Until the County approves the Stormwater Plan, the proposal is not consistent with the local Chesapeake Bay Preservation Ordinance.

We appreciate the opportunity to review this project. If you have any questions, please do not hesitate to call.

Sincerely,

Arthur L. Collins
Executive Director/Secretary

Dear Mr. Elis:

The Environmental Impact Review for Jamestown Settlement refers to stormwater ponds. The CSMP does not show these ponds. The draft Stormwater Management Master plan was submitted separately for County review. The Environmental Division's comments are attached. Until the BMP Master Plan receives County approval, Jamestown Settlement does not comply with our Local Chesapeake Bay Ordinance.

The wetlands boardwalk as shown on the CSMP seems to include excessive amounts of clearing in an area that may be needed for natural open space bmp points. This concern could be addressed by requiring JCC approval of boardwalk construction plans. This area is infested with invasive ivy which will kill the trees in this area and cover the board walk. Perhaps this is an educational point to be made about invasive plants. Please show the 150 foot Community Character Buffer along Jamestown Road..

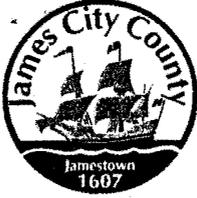

Before removing the marine railway please obtain JCC approval regarding protection and /or restoration of the RPA.

Sincerely,

Wayland N. Bass
County Engineer

RE: Jamestown-Yorktown Foundation Projects: New Stormwater Management Master Plan, dated July 3, 2002

Dear Mr. Ellis:

On August 2, 2002, a memo, which included copies of a new Stormwater Management Master Plan from the Jamestown-Yorktown Foundation, was forwarded to me. Although no instructions or requests were included in your memo, James City County has taken the opportunity to review the revised materials and our comments are enclosed for your use.

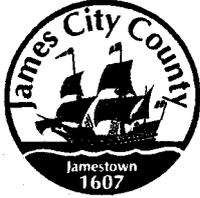

We appreciate the opportunity to review these materials. If I can be of further assistance, please contact me.

Mr. David Wolfe Kent, AIA
Project Administrator
Jamestown-Yorktown Foundation
P.O. Box 1607
Williamsburg, Virginia 23187

RE: Environmental Impact Reports for Jamestown-Yorktown Foundation Projects:
(1) Jamestown Settlement Improvements/Stormwater Improvements and Boardwalk (project code 16474), DEQ-01-026S, and
(2) Jamestown Settlement Maintenance Building (project code 16473), DEQ-02-029S

Dear Mr. Kent:

In the course of our review of the Environmental Impact Report (EIR), the stormwater management master plan, and the revised stormwater management plans you submitted for these projects, we have identified several issues that continue to need resolution before we can recommend either project for approval to the Governor, pursuant to *Virginia Code* sections 10.1-1189 and 10.1-1190 (Environmental Impact Reports of State Agencies) and Executive Order 88(01). Accordingly, we are suspending our 60-day review of the revised information we received on June 3, pending receipt of additional information. A new 60-day review period will begin upon our receipt of the information requested. We will, of course, respond as quickly as possible once the new information is received.

If the issues raised in this letter cannot be satisfactorily resolved and the stormwater management plan is not revised to comply with the Chesapeake Bay Preservation Act, DEQ may find it necessary to recommend against approval of these two projects.

The Chesapeake Bay Local Assistance Department (CBLAD), in reviewing these two projects and the information submitted as of June 3, indicated several concerns with

Mr. David Wolfe Kent, AIA
July 31, 2002
Page 2

the Stormwater Management Master Plan (hereinafter the "Plan") submitted earlier by the Foundation. Both these projects are tied to the Plan. CBLAD indicates that it has corresponded previously with the Foundation regarding these concerns. They are as follows.

- (1) The "group area" denoted in the Resource Protection Area (RPA) is not water-dependent and needs to be relocated out of the RPA.
- (2) The concession area ("shop") needs to be shifted out of the RPA, since it is not water-dependent.

These encroachments into the RPA need to be removed before either project can be consistent with the Chesapeake Bay Preservation Area Designation and Management Regulations (9 VAC 10-20-10 et seq.).

The proposed open space area has been reduced in size since submission of the last stormwater management plan reviewed by CBLAD. The reductions appear to be attributable to encroachments of the employee parking lot, an amphitheatre, and the boardwalk into this area. According to CBLAD, using this area as credit toward the 10-point BMP Credits needed for the projects presents the following concerns (we are numbering consecutively to aid you in addressing the items in this letter):

- (3) The County's BMP guidance for the use of open space toward this credit requires a conservation easement, or other enforceable instrument, to ensure perpetual protection of the area. From the mapping given, it appears that this area is not within the Foundation's property boundaries. As CBLAD states, **without a permanent protective mechanism, this area cannot be credited toward the needed BMP credits.**
- (4) To receive open-space BMP credit, the open space cannot be disturbed during construction activities (i.e., it cannot be cleared or graded). The conservation area appears to include areas that would be disturbed by construction of a substantial boardwalk through the area. The plans also indicate a BMP design detail which will require alteration of the open space, potentially including the wetland, for the requisite plunge pool, micropool, and outlet structure. **The disturbed areas, including the boardwalk, and BMP area should not be counted in the area measure of the conservation area if that area will be disturbed.**

In addition, CBLAD has indicated concerns with the way the water calculations were prepared. These are as follows.

Mr. David Wolfe Kent, AIA

July 31, 2002

Page 3

- (5) The master plan indicates a total site area of 35.69 acres. For purposes of calculations, only DAs 4 and 5 (24 acres) were considered as the site area. Separating out DAs 1, 2, and 3 (the Entrance Plaza and Parking Lot, DEQ-01-039S) from DAs 4 and 5 presents no problem, provided that these also achieve 10 BMP points separately. The calculations indicate that the fraction of the site served by BMP #B-3 is 0.74 (14.72/19.89). Assuming that the site area is 24 acres, the denominator (19.89) appears to have been derived by subtracting the conservation area. For this to be a true fraction, **both sides of the equation should include the conservation area. Thus the fraction of the site served would be 0.61 (14.72/24), yielding 6.1 BMP points.**

CBLAD suggests two possible ways to achieve additional BMP credits. First, given the need for them, and the numerous concerns with use of an area for open space that is not part of the Foundation's property, CBLAD recommends consideration of the idea of making easement arrangements off-site. This would involve the payment of an off-set fee, such that the County or an approved land trust may purchase developable land as natural open space off the project site. Secondly, another structural BMP might be provided, as follows. There appears to be a drainage swale between the ship maintenance facility and the wooded amphitheatre that might serve both these areas, the other amphitheatre, the nearby parking, and the concession stand. CBLAD recommends that the drainage consultant investigate whether using this area would be feasible.

We ask that the Foundation address issues #1 through 5 above, and consider how to ensure that the stormwater management plan covering these projects meets the Regulations cited above. The information submitted thus far does not remedy these concerns. We recommend that the Foundation and its consultants meet with representatives of CBLAD, this office, and the Department of Conservation and Recreation's Division of Soil and Water Conservation as a pre-requisite to submitting further stormwater management plans. We recommend that you invite the National Park Service and James City County staff as well. The meeting could be in Richmond, Jamestown, or Williamsburg.

In the course of addressing the issues above, we also recommend that the Foundation commit itself to an archaeological survey of the areas to be affected by the final stormwater management design. The Department of Historic Resources recommends such as survey, pre-requisite to any ground disturbance, because one archaeological site has been found in the parking lot area (as discussed in our response on the proposed Entrance Plaza and Parking Lot Expansion, DEQ-01-039S). There may be other such sites in the area of the proposed Jamestown Settlement Improvements or the Maintenance Building that would be affected by the final stormwater management plan. While the survey must be completed and reviewed prior to any ground disturbance, it

Jamestown: Interpretive Pathway (425-01425-04)

CBLAD Project Review No. SSPR-JYF-05(B)-01

Dear Ms. Irons:

We were recently copied on two letters (dated 5/14/02, 4/21/02) addressed to you from the Jamestown-Yorktown Foundation and have reviewed the Jamestown Settlement Master Plan (dated 4/22/02) and the revised Stormwater Management Master Plan (dated 5/2/02) for the Jamestown-Yorktown Settlement sent to us with these letters. The following is a discussion of the status of these projects with respect to consistency with the Chesapeake Bay Preservation Area Designation and Management Regulations (Regulations). We have several remaining concerns with the proposed plans. Most of these concerns were raised in earlier correspondence, phone discussions, and meetings. For purposes of clarity between our former comments and these it should be noted that the drainage areas (DAs) have been redrawn and renumbered accordingly. Former DAs 1, 2, and 3 are now group together as drainage area 4. Former drainage areas 4, 5, and portions of former drainage areas 2 and 3 are now grouped together as drainage area 5. The parking lot and entrance plaza are now denoted and numbered as drainage areas 1, 2, and 3.

Entrance Plaza/Parking Lot Renovation:

The revised stormwater master plan indicates that the parking lot and entry plaza areas (DAs 1, 2, and 3) are to be addressed separately from the master plan. Attached are comments we made in a letter dated March 27, 2002 to Rickmond Engineering, Inc. regarding the stormwater

Ms. Irons
June 5, 2002
Page 2 of 3

management plan for the parking lot and entry plaza. The revised stormwater management plan indicates that 100 percent of the parking lot and entry plaza will be served by the 3 dry swales. **The full credit (10 BMP points) for these BMPs can be applied provided that pretreatment is incorporated into the design (see CBLAD March 27, 2002 letter attached). Provided this condition is met, the project would be consistent with the Regulations.**

SWM Improvements, and Boardwalk, Riverfront Amenities/Shipwright Building, Maintenance Building Renovation/Expansion, Interpretive Pathway:

These four projects are tied to the stormwater management master plan, for which we have remaining concerns. Other concerns have also not been addressed. For example, the "group area" denoted in the Resource Protection Area (RPA) is not water-dependent and needs to be relocated out of the RPA. Also, grading for the ship maintenance build extends into the RPA. The design of the riverfront interpretive pathway does not reflect the changes per the last correspondence between CBLAD and the Foundation. The Building should be shifted back out of the RPA. The concession area ("shop") is still within the RPA and needs to be shifted back out of the RPA as it is not water-dependent. **These encroachments need to be removed before the projects are consistent with the Regulations.**

The proposed open space area has been reduced in size since the last stormwater management plan we reviewed. The reduction appears to be due to encroachments of the employee parking lot, an amphitheater, and boardwalk into this area. The following describes several concerns we have regarding the use of this area as credit towards the 10-point BMP Credits needed for the project:

- The County's BMP guidance for the use of open space towards this credit requires that a conservation easement or other enforceable instrument that ensures perpetual protection of the area. From the mapping provided it appears that this area is not within the Foundation's property boundaries. **Without a permanent protective mechanism this area cannot be credited towards the needed BMP credits.**
- To receive open space BMP credit the open space area cannot be disturbed during project construction (i.e., cleared or graded). It appears the conservation area also includes areas that would be disturbed by the construction of a substantial boardwalk through the area. Also, the plans indicate a BMP design detail, which will require alteration of the open space area, potentially including the wetland for the requisite plunge pool, micropool and outlet structure. **The disturbed areas including the boardwalk, and BMP area should not be counted in the area measure of the conservation area if the area will be disturbed.**

We have several concerns with how the water calculations were prepared, which are as follows:

- The master plan indicates that the total site area is 35.69 acres. For purposes of the calculations, only DAs 4 and 5 (24 acres) were considered as the site area. We have no problem with separating out the DAs 1, 2, and 3 (entrance plaza and parking lot) from DAs 4 and 5, provided that DAs 1, 2, and 3 also achieve 10 BMP points separately. The calculations indicate that the fraction of the site served by BMP #B-3 is 0.74 (14.72/19.89). Assuming that 24 acres is the site area, the denominator

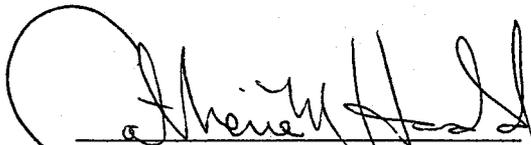

(19.89) in this equation appears to have been derived at by subtracting out the conservation area. For this to be a true fraction **both sides of the equation should include the conservation area. Thus, the fraction of the site served would be 0.61 (14.72/24) yielding 6.1 BMP points.**

Given the need for additional BMP credit and the numerous concerns with use of an area for open space credit that is currently not on the Jamestown-Yorktown Foundation's property, we suggest that the Foundation explore the idea of making easement arrangements off site. This would involve the payment of an off-set fee such that James City County or an approved land trust may purchase developable land as natural open space off-site. We would be available to meet with the Foundation, James City County and any other party to discuss the possibilities regarding these alternatives.

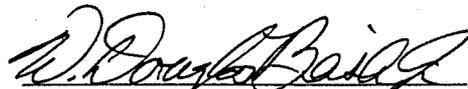

Another possibility for achieving additional BMP credits would be to explore the idea of providing another structural BMP. There appears to be a drainage swale between the ship maintenance facility and wooded amphitheater that might serve both of these areas the nearby parking, concession stand, and the other amphitheater. The Foundation's drainage consultant should investigate whether this would be feasible from a water quality treatment perspective and whether there would be any constraints to using this area for this purpose.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

**RE: Jamestown: SWM Improvements, and Boardwalk (425-16474)
CBLAD Project Review No. SSPR-JYF-05(C)-01**

Dear Ms. Irons:

We were recently copied on a letter addressed to you (dated 7/1/02) from the Jamestown-Yorktown Foundation and have reviewed the Jamestown Settlement's working drawings for the Stormwater Management Improvements. We have a number of concerns with the proposed stormwater management plan that remain outstanding as well as some new concerns with the details of the plan. Several of these concerns have been repeatedly raised in earlier correspondence, phone discussions, and meetings, most recently in our letter to you dated June 5, 2002. I believe the Department of Conservation and Recreation may also have concerns with the proposed stormwater plan as well. You may recall that we discussed some of these issues at our meeting with the Foundation held in our office on June 11, 2002. Because many of the proposed projects rely on providing satisfactory stormwater management for the overall site, resolution of the stormwater plan is the critical path for approval of these other projects.

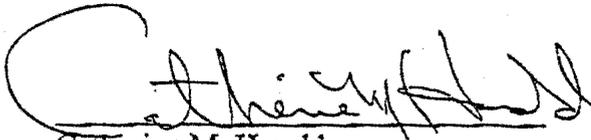

Some of the concerns we have with the BMP are with the establishment of a conservation easement on the open space area, accounting issues with the BMP credits claimed, an adequate channel analysis below the BMP outfall, whether any trees will be cleared in the area upslope of the timber wall, a hydraulic routing of the BMP, how runoff from impervious surfaces are to be conveyed to the BMP that is presumably serving these

Ms. Irons
July 25, 2002
Page 2 of 2

areas, and whether the permitting agencies have concerns with the placement of a BMP in a wetland area.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

MEMORANDUM

TO: David Kent, Jamestown-Yorktown Foundation

FROM: Ellie Irons, DEQ-OEIR

SUBJECT: August 7, 2002 Meeting on Stormwater Issues relative to Jamestown-Yorktown Foundation Projects: (1) Jamestown Settlement Stormwater Master Plan, DEQ-01-026S; (2) Jamestown Settlement Maintenance Building Addition, DEQ-02-029S; and (3) Riverfront Amenities and Shipwright Building, DEQ-02-030S

Copies: ✓ Charlie Ellis, DEQ-OEIR
Anne Newsom, DEQ-OEIR
Matt Roth, ESG
Catherine Harold, CBLAD
Kenny Jenkins, Rickmond Engineering
Robert Cooper, DCR-James Watershed

Thank you for attending the August 7 meeting on these projects. This memo is intended to summarize conclusions we reached and reflect our common understanding of the next steps to be taken in the environmental review pursuant to *Virginia Code* sections 10.1-1188 *et seq.* (the state Environmental Impact Reports law). These long-standing issues must be resolved prior to completion of the environmental review process for any project which contemplates using the regional stormwater facility. Please contact Charlie Ellis (telephone (804) 698-4488, or e-mail address chellis@deq.state.va.us) or me (telephone (804) 698-4325, e-mail elirons@deq.state.va.us) if your understanding differs from what is presented here.

First, the Master Plan contemplates use of an area along the southeast side of Route 31, southwest of the proposed parking area toward the James River, as a site for stormwater management facilities and possibly a conservation easement in order to accommodate stormwater flow and to meet Chesapeake Bay Preservation Act (CBPA) requirements. This area is currently owned by the Department of Transportation (VDOT). In the absence of a transfer of the land by VDOT to the Foundation, or of permission from VDOT, the Foundation may not alter the area for purposes of stormwater management or development; nor may it use the area as a conservation easement. Approval of the Regional Stormwater Management Plan by the Department of

RE: Jamestown Settlement Stormwater Management Master Plan

Dear Mr. Shuflat:

Thank you for having your consultant submit a revised stormwater management master plan for the Jamestown Settlement. We have reviewed the plan and deem it consistent with the *Virginia Stormwater Management Act* and attendant regulations. Two (2) signed copies of the approved plan are enclosed for your use. Please note that detailed plans for the stormwater management features proposed in the master plan must be approved prior to construction. In addition, future project development plans should reference the approved master plan.

If you have any questions regarding this matter, please do not hesitate to contact me at (757) 925-6048.

Sincerely,

RE: Jamestown Settlement Entry Plaza and Parking Lot Improvements
CBLAD No. SSPR-JYF-04(B)-01

Dear Mr. Wetmore:

We have reviewed your comments dated March 27, 2002, regarding the above referenced project and generally concur with your analysis and recommendations. The dry swale with the modifications you have described would be an acceptable approach to provide stormwater management for the entry plaza and parking lot. The pretreatment of the concentrated flows entering the dry swale through the use of forebays is very important as is maximizing the amount of flow that enters the swales in a sheet flow manner. However, as you point out, soil testing needs to be performed to evaluate the feasibility of using the dry swale in this location before further design. If the groundwater table is too high, an alternate BMP type will be required.

The information you provided us did not show the discharge point of the facility. It is important that an acceptable discharge point be identified. One consideration would be that if the facility outlets directly into tidal waters, the channel protection volume will not be required in the BMP. Another important issue to us is regional stormwater management. We encourage the use of one larger facility to provide stormwater management for several projects rather than the use of multiple facilities that only serve one project. Therefore, we have encouraged and continue to encourage the Jamestown-Yorktown Foundation to work with the Virginia Department of Transportation and Mr. Vermillion, the adjacent private property owner, to determine if one stormwater facility can be provided to meet the requirements for the their individual projects. We encourage you as representatives of a state agency to help facilitate this cooperation between the two state agencies.

Please contact me at 757-253-6670 if you have any further questions.

Sincerely,

Darryl E. Cook, PE

**RE: Jamestown Settlement Entry Plaza and Parking Lot Improvements
CBLAD Project Review No. SSPR-JYF-04(B)-01**

Dear Mr. Jenkins:

As you requested, we have reviewed the conceptual revised drawings for the proposed parking lot serving the Jamestown Settlement. The following are our comments and recommendations.

We have some concerns with the use of a dry swale BMP design as presently designed and recommend some modifications to address these concerns. The selected design is more typically used in lower density settings with less imperviousness in the contributing drainage area. The siting guidance for water quality swales in Virginia Stormwater Management Handbook (VSWMH) Minimum Standard 3.13 indicates that this type of BMP is appropriate in settings where the imperviousness of the watershed is between 16-37%. The James City County (JCC) BMP Guidelines suggests that such BMPs be applied in low to moderate density developments (maximum density of 3 dwelling units/acre). However, given that the BMPs will wrap around most of the parking lot and with some modifications we feel that this design may be acceptable.

The design should address the rate and delivery points of stormwater to the BMPs. Concentrated runoff delivered to the swales should be pretreated in a sediment forebay first. This would also help to throttle down flow rates and lessen the possible resuspension of sediment particles in the swales themselves. We also suggest that as much area as possible be delivered to the swales via sheet flow.

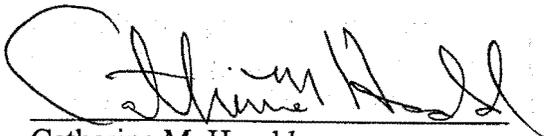

Mr. Jenkins
March 27, 2002
Page 2 of 2

Despite our foregoing comments, an altogether different BMP approach might be necessary if it turns out that the groundwater table is too high. If a subsurface investigation has not already been conducted, we recommend that this be initiated as soon as possible before a commitment is made to a final BMP design. The JCC BMP Guidelines indicates that for proper BMP functioning, the water table should be at least 2 feet below the bottom of a dry swale. The Virginia Stormwater Management Handbook recommends a 2 to 4-foot separation between the bottom of an infiltration facility and the water table and that subsurface soil have a permeability between 0.52 inches per hour and 8.27 inches per hour. The JCC BMP Guidelines suggest a 4-foot separation for infiltration facilities.

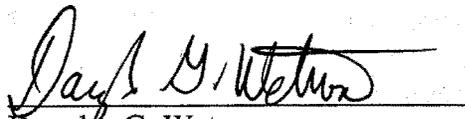

As a side note, you should probably coordinate the design with VDOT as well. It is our understanding that a VDOT is currently studying the realignment of the Route 31 connector road. We are not certain if this will have any bearing on the parking lot design.

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

MEMO

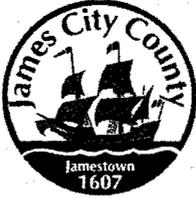

To: John Horne, Development Manager
From: Darryl E. Cook, Environmental Director *DEC*
Subject: Jamestown Settlement Gateway BMP
Date: February 5, 2002

I reviewed the information regarding the construction of a BMP facility to serve the Foundation, VDOT, National Park Service, and the Vermillions. Concerning the construction cost, \$60,000 appears to be reasonable if it is strictly for construction. Thought needs to be given as to how the 7300 cubic yards of soil excavated for the BMP will be disposed of. If it is a suitable material, it can be used (lost) onsite by raising the grade of the parking lot. This would be the most economical disposal. Trucking the material offsite would be very expensive unless a ready buyer was available. So some consideration needs to be given to that aspect of the project although it could be assumed the costs would be shared proportionally between the four parties.

The maintenance cost of \$7100 per year seems a little high. This represents 11.8% of the construction cost. When we had the BMP maintenance costs estimated for us by the Center for Watershed Protection, the annual maintenance cost they used was 5% of the total construction cost. In this case, that would be \$3000. In reviewing their analysis, the dredging costs seem to be high. I would not anticipate that 1600 cyds or 22% of the BMP volume would need to be dredged every 10 years especially with forebays that should be built into this facility. Also, mowing and vegetation control costs would probably be less than \$4000 as the general upkeep of the site area would probably include most of this work. It would seem reasonable that the annual costs would be between \$4000 and \$5000. However, if the intent is to develop a conservative estimate and as it is lumped in together with the construction costs, I have no issue with the first year contribution costs developed.

Concerning the two options for contribution, either allocation method is valid. To be consistent with what most utility calculations are based on, impervious area would be the better basis for allocation.

One final point is that if the basin discharges into a tidal area, there would be no requirement to provide quantity control, only water quality control. If the basin has been designed including quantity control and it outfalls into a tidal area, then it could be reduced in size and costs of course would be reduced.

RE: Jamestown Settlement Stormwater Management Plan

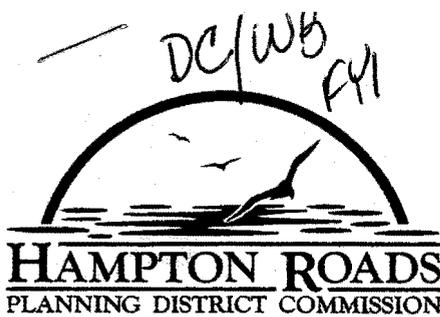

Dear Mr. Jenkins:

I have reviewed the most recent submission of the above referenced plan and all the technical comments relating to the plan have been addressed. The only outstanding issue is that a 4.99 acre conservation easement needs to be established in order for the site to fully meet the James City County stormwater management requirements. The conservation easement in conjunction with the proposed stormwater management facility will satisfy the County's requirements. However, this letter is written with the understanding that the County will not be issuing any permits for the project and will not be inspecting the site for compliance with the approved plans.

I understand that there may be legal issues with the establishment of a conservation easement by the state to the County. This issue will need to be addressed in some manner before the plan can be determined to be consistent with the County's Chesapeake Bay Preservation Ordinance. Please contact me at 253-6670 if you have any questions.

Sincerely,

Darryl E. Cook, P.E.

Re: Jamestown Settlement:
Riverfront Amenities and
Shipwright Building
DEQ #02-030S (ENV:GEN)

Dear Mr. Ellis:

Pursuant to your request of February 12, 2002, the staff of the Hampton Roads Planning District Commission has reviewed the Environmental Impact Report for Jamestown Settlement: Riverfront Amenities and Shipwright Building. We have contacted James City County concerning the project.

James City County has identified several items that need to be addressed before we can consider the project to be consistent with local plans and policies. These items are identified in a separate letter to you from the County. For your convenience, we have attached a copy of the County's comments. We recommend that the applicant work with the County to address local planning, environmental, and utilities issues identified in its letter.

We appreciate the opportunity to review this project. If you have any questions, please do not hesitate to call.

Sincerely,

Arthur L. Collins
Executive Director/Secretary

**RE: Jamestown Settlement Stormwater Management Master Plan
CBLAD Project Review No. SSPR-JYF-05-01**

Dear Mr. White:

Following our recent review of your proposed stormwater management plan, we have had a discussion with Daryl Cook and Wayland Bass of James City County Public Works Department regarding this project and wanted to provide additional comments to those we made in our letter to you on May 23, 2001. We apologize for any confusion regarding our comments as they relate to the local program requirements in James City County.

According to Messers Cook and Bass, who have had the advantage of reviewing more detailed plans for the proposed stormwater management pond, there would be very little disturbance to the existing wetlands (essentially a shallow timber dam at the lower end of the wetland). They also indicated that there would be a wet pond with a forebay feature as an upgradient pretreatment facility located on the north side of a road immediately above this wetland. This would allay our concern regarding the placement of a BMP in an existing wetland, which appears to be indicated in Appendix F (Stormwater Management Facilities Map) of the Stormwater Master Plan for the Jamestown Settlement. Much of Drainage Areas 1 and 2 would be directed through this pond. However, it is not clear how runoff from Drainage Area 3 would be directed to this pond or treated in some other way.

We remain concerned with the lack of a conservation easement or other enforceable protective instrument for the proposed open space area. We would like to reiterate that a land protection mechanism that would be binding in perpetuity is necessary in order for

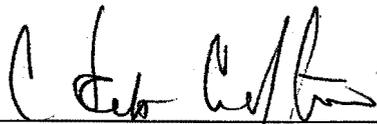

Mr. White
June 19, 2001
Page 2 of 2

the area to qualify for the open space BMP credit. The construction plans should also include notes as to how this area will be protected from disturbances during construction activities (to qualify for open space credit the area cannot be disturbed during project construction).

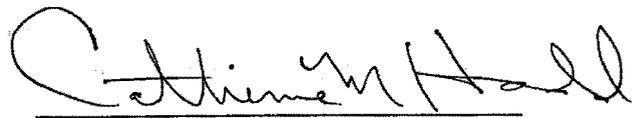

We request that the Foundation keep this agency abreast of the development plans and stormwater management plans for development activities planned at the Settlement property. The final stormwater management plan should clearly show what areas will drain towards the open space area via overland flow. Based on our recent discussions with the County, the Foundation should attempt to incorporate low impact development design techniques into future site designs where landscaping and topography permits, particularly in Drainage Areas 4 and 5, where no stormwater treatment is currently proposed.

We are also available to meet with the Foundation and/or its consultant to discuss the master plan and options for stormwater control. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

for William D. Beisch, Jr., P.E.

**RE: Jamestown Settlement Stormwater Management Master Plan
CBLAD Project Review No. SSPR-JYF-05-01**

Dear Mr. White:

We have reviewed the stormwater master plan for the improvements at the Jamestown Settlement, which was sent to us by Rickmond Engineering, Inc. The following are our comments and recommendations.

We are pleased to see that the first steps in planning for stormwater has attempted to look at the subdrainage areas of the property. However, we have overall concerns with the BMP planned for the southern portion of the property. The Master Plan should also evaluate stormwater needs for the northern portion of the property as well.

A major concern we have with the plan is that only one BMP is contemplated, the construction of a pond/wetland BMP in a location that is already a forested wetland. The plan claims that this BMP and surrounding greenspace will achieve all of the requisite stormwater credits needed for all future development projects in the southern portion of the property. ~~The placement of a BMP in forested wetlands is strongly discouraged.~~ Theoretically, the net removal efficiency of a pond/wetland BMP placed in an existing wetland would need to take into account the fact that the existing wetlands currently provide some measure of pollutant removal. Construction of some buildings is currently underway at the Settlement and it is not clear whether the water quality criteria for this construction have already been addressed. Another concern we have with the overall plan is that no stormwater BMPs are planned for Drainage Areas 4 and 5.

The open space credit proposed for this project is not entirely consistent with the County's BMP Guidelines. The credits claimed appear to include the area measure of the BMP for which BMP credits were already accounted for. The land area identified includes wetlands that are already protected under state and federal regulations. To qualify for open space credit the area cannot be disturbed during project construction (BMP construction is currently proposed in this open space area). It is not clear whether the runoff from the development site will be conveyed to this area in a connected or disconnected manner. Given that the BMP is credited with treating 16.45 acres, it is presumed that delivery to the BMP would largely be via a connected drainage system. The County's guidance for open space credit only allows for 0.15 points per 1% of the total site area where the area receives runoff from disconnected impervious surfaces.

With respect to the use of open space credit, the County's BMP guidance also requires that the area be located within a conservation easement or other enforceable instrument that ensures perpetual protection of the proposed area. The May 3, 2001 Rickmond Engineering letter to the County indicates that the Foundation would be unable to dedicate a formal easement around these areas. Figure 2 of the stormwater plan suggests that much of the area proposed as open space is not presently under the Foundation's ownership. ~~This requirement for the legal instrument with respect to providing open space credit and the perpetual protection of the area cannot be overemphasized.~~ Based on the information provided, and the foregoing comments ~~the higher Open Space BMP credit of 0.15 points cannot be used for this area.~~

The stormwater management criteria of the Chesapeake Bay Preservation Area Designation and Management Regulations (Regulations) require that for any new development, the post-development nonpoint source pollution runoff load shall not exceed the pre-development load based upon average land cover conditions. ~~Redevelopment of any site not currently served by water quality best management practices shall achieve at least a 10% reduction of nonpoint source pollution in runoff compared to the existing runoff load from the site.~~ Post-development runoff from any area to be redeveloped that is currently served by water quality best management practices shall not exceed the existing load of nonpoint source pollution in surface runoff. It appears that some of the areas planned for improvements may actually meet the definition of redevelopment. In accordance with these requirements James City County developed a jurisdiction-wide stormwater management program, which the Chesapeake Bay Local Assistance Board has approved. The County's nonpoint source control requirements are based upon a BMP point system.

We highly encourage the Foundation to incorporate low impact development design techniques as it plans for future development at the Settlement. Many of these techniques could attractively blend in with the rustic atmosphere of the Settlement. It has been found that many of these techniques are also less costly than traditional pond type of stormwater BMPs. We would be glad to meet with the Foundation and/or its consultant to discuss the master plan and alternative options for stormwater control.

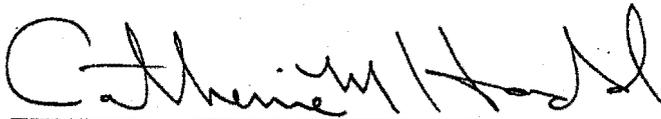

Mr. White
May 23, 2001
Page 3 of 3

In the Chesapeake 2000 Bay Agreement, the Governor committed the agencies of the Commonwealth to a number of sound land use and stormwater quality controls. The Governor additionally committed the agencies to lead by example with respect to controlling nutrient, sediment and chemical contaminant runoff from state properties. The Chesapeake Executive Council is expected to issue a directive soon, to address specific charges for agencies to lead by example with respect to stormwater control. It is anticipated that the directive will charge state facilities to showcase innovative stormwater designs that could also serve to educate the public as well. The Governor also committed the Commonwealth to enhancing interpretation materials that promote stewardship at natural, recreational, historical and cultural public access points.

The May 3, 2001 letter from Rickmond Engineering to the County had a question as to the role of the Chesapeake Bay Local Assistance Department in the review of this project. The Department is the agency responsible for ensuring that state agencies comply fully with local zoning and subdivision ordinances adopted pursuant to the Bay Act.

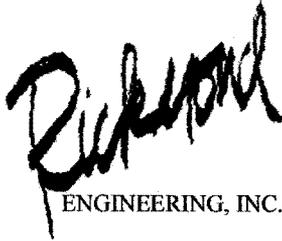

We appreciate the opportunity to provide our comments on this project. Please do not hesitate to contact us at 1-800-CHESBAY should you have any questions.

Sincerely,

Catherine M. Harold

Memo

To: Mr. Darryl E. Cook, P.E.
James City County Environmental Division

From: Steven W. Stafford, P.E. *SWS*
Civil Department Manager *05.03.2001*

Subject: Jamestown-Yorktown Foundation
Jamestown Settlement Stormwater Management Master Plan
REI Project No. 00175-020

Date: May 3, 2001

On behalf of the Owner, Rickmond Engineering, Inc. is pleased to submit the enclosed revised master plan for the subject project. This plan has been revised to incorporate the review comments dated March 9, 2001 from the previous submittal and are provided for your review and approval. To that end, the following information consists of the Environmental Division comment followed by the appropriate response that describes the action taken:

Comment No. 1: The master plan proposes the dedication of conservation easements to the County. There was a question raised previously about the ability of the State to grant an easement to the County. Has that question been answered?

Response: The Stormwater Management Master Plan (SWMMP) has identified the proposed conservation areas that will be maintained by the Jamestown-Yorktown Foundation. At this time, it appears that the Foundation will be unable to dedicate a formal easement around these areas. However, the Foundation maintains the position that it is their desire to comply in as much as practical with the local criteria. A more detailed response to this issue is being prepared by the Foundation and will be provided to your office under a separate cover.

Mr. Darryl E. Cook, P.E.

May 3, 2001

Page Two

Comment No. 2: An Open Space Easement is proposed for the area adjacent to the river, which is an RPA. The area currently has some development in it as well as some areas that do not have the three layers of vegetation required to qualify as open space. In order to credit this area as Natural Open Space under the 10-point system, the size of the proposed easement will need to be reduced to include only the vegetated, natural areas. Additional points can be obtained by increasing the size of the other proposed conservation easement.

Response: The proposed conservation areas and Best Management Practice (BMP) design have been revised to facilitate the removal of the Research ^{Source} Protection Area (RPA) from the BMP calculation.

Comment No. 3: The parking lot to the north of the site is to be expanded and the entrance road relocated to the perimeter of the expanded parking lot. VDOT is proposing the construction of a BMP near the Jamestown Marina to control the road runoff. In earlier meetings, it was proposed to control the parking lot expansion in the same facility. This should be addressed in the master plan as well.

Response: The appropriate revisions to the SWMMP have been made to indicate the parking lot and BMP improvements that are to be designed in cooperation with the Virginia Department of Transportation (VDOT).

Comment No. 4: Concerning calculation of the open space credit, 0.15 was used as the credit amount. This higher value is to be used for areas adjacent to wetlands, RPAs or mature forests. It should not be used for the RPA itself and any mature forested area that is adjacent to a conservation easement must be protected against development in some manner. These issues will need to be looked at in more detail to determine if the open space areas would be eligible for this additional credit.

Response: The proposed conservation areas and BMP design have been revised to facilitate the removal of the RPA from the BMP calculation.

It should be noted that at this time the role of Department of Conservation and Recreation (DCR) and the Chesapeake Bay Local Assistance Department (CBLAD) as it relates to project review and approval is unclear. Therefore, by copy of this memorandum, we are submitting a copy of the revised SWMMP to DCR and CBLAD for their review and approval, if required. Should you have any questions or require additional information, please contact our office.

Mr. Charles H. Ellis, III
Environmental Impact Review Coordinator
Commonwealth of Virginia
Department of Environmental Quality
P. O. Box 10009
Richmond VA 23240

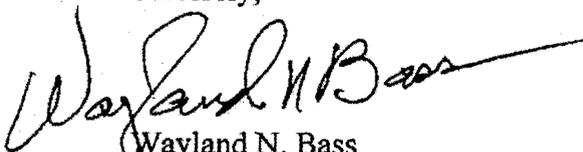

Dear Mr. Elis:

The Environmental Impact Review for Jamestown Settlement refers to stormwater ponds. The CSMP does not show these ponds. The draft Stormwater Management Master plan was submitted separately for County review. The Environmental Division's comments are attached. Until the BMP Master Plan receives County approval, Jamestown Settlement does not comply with our Local Chesapeake Bay Ordinance.

The wetlands boardwalk as shown on the CSMP seems to include excessive amounts of clearing in an area that may be needed for natural open space bmp points. This concern could be addressed by requiring JCC approval of boardwalk construction plans. This area is infested with invasive ivy which will kill the trees in this area and cover the board walk. Perhaps this is an educational point to be made about invasive plants. Please show the 150 foot Community Character Buffer along Jamestown Road..

Before removing the marine railway please obtain JCC approval regarding protection and /or restoration of the RPA.

Sincerely,

Wayland N. Bass
County Engineer

ENVIRONMENTAL DIVISION REVIEW COMMENTS

Jamestown Festival Park Drainage Improvements

E&S-06-01

August 3, 2001

DEC

Note: These comments are based on the understanding that this project is only being reviewed for compliance with the James City County Chesapeake Bay program requirements but that the work will not actually be permitted by the County.

Chesapeake Bay Preservation Ordinance:

- ①. There are extensive gravel walks and what appear to be observation areas and a shelter proposed to be located in the Resource Protection Area (RPA). These are located near the boat docking area and proposed for Phase III of the project. Unless an item is a water dependent feature, the Ordinance only provides for the location of passive recreation features in the RPA. While trails and walkways are permitted in the RPA, the observation areas, shelter, and the wide gravel walks may be in conflict with the Ordinance. This is also the area where fairly extensive plantings have recently occurred in the RPA buffer in an attempt to restore some of its water quality function. Discussion will need to occur regarding these items before a determination can be made as to their ability to be located as shown.
still large areas of walkways in RPA
- ✓ 2. Show on the plan the location of the RPA.

- ③. There is a 4.99 acre portion of the site that is to be placed in a conservation easement to satisfy in part the stormwater management requirements for the site. It is still an unresolved issue as to whether the Jamestown-Yorktown Foundation can dedicate an easement to the County. If it cannot, then an alternate method of preserving the area in perpetuity needs to be developed.
Temporary approval for peak years 2007 - then reduce size afterwards

Stormwater Management / Drainage:

- ④. The criteria to be used for the channel protection aspect of the BMP is the 24-hour detention of the runoff generated from the 1-year, 24 hour storm. This detention time is determined by the difference in the center of the mass for the inflow and outflow hydrographs. An alternate method is to compute the release assuming the basin fills immediately with the runoff and then is released over 24 hours. The volume of runoff for the 1-year storm is 2.14 ac-ft. Based on this volume, the release should be about 1.1 cfs. Using the calculation procedure in the County's BMP manual, the release rate would be 1.4 cfs. What has been designed only limits the 1-year storm to about 5.7 cfs and only stores about 0.9 ac-ft of volume. Please revise the design to obtain the 24 hour detention required. There is additional information contained in the state's Stormwater Management Manual regarding this calculation procedure. ~~Does D12 of James Fort drain their name? What about any release for the storm only controls to provide of levels - need to revise water quality volume?~~
Does pond volume include forebay? Not forebay behind rock check dam
- ⑤. Provide more information regarding the pond portion of the BMP. The upstream invert of the pipe needs to be specified and provided with a headwall or flared end section, something to support and protect the end of the pipe. ~~RR outlet?~~ Discuss modeling w/ K. Jenkins
Pond routed separately for outlet system; pond inc. w/ wetland for routing
- ⑥. Provide a rock check dam above the pond in the existing ditch to establish its use as a forebay for the pond/wetland system. ~~Add dimensions on plan~~
- ✓ 7. Provide a map that shows the flow path used for calculation of the time of concentration.
- ✓ 8. The calculations and the narrative information for the project state that only drainage areas

DA-1, 2, and 3 are controlled by the BMP. However, the drainage plan shows that a large portion of the James Fort will be piped to the BMP. Please insure that this drainage and impervious cover have been included in the design of the BMP facility.

9. As the 2-foot wide weir is nested within the 17-foot wide weir, the flow for the full weir has been overestimated. The flow for the smaller weir should not be added to the calculation for the larger weir except for the portion of the flow below elevation 12.14.

10. Please provide an analysis of how the pond discharge will function in relation to the remainder of the BMP. There is a concern that the 15" pipe will not be adequate to convey the flows from the upstream area without overtopping the road berm that separates the two areas of the BMP, especially when considering the backwater effect on the pipe. A routing that considers the tailwater conditions on the pipe's discharge needs to be performed.

Prob. ok - discuss w/ Engr.

What about w/g release

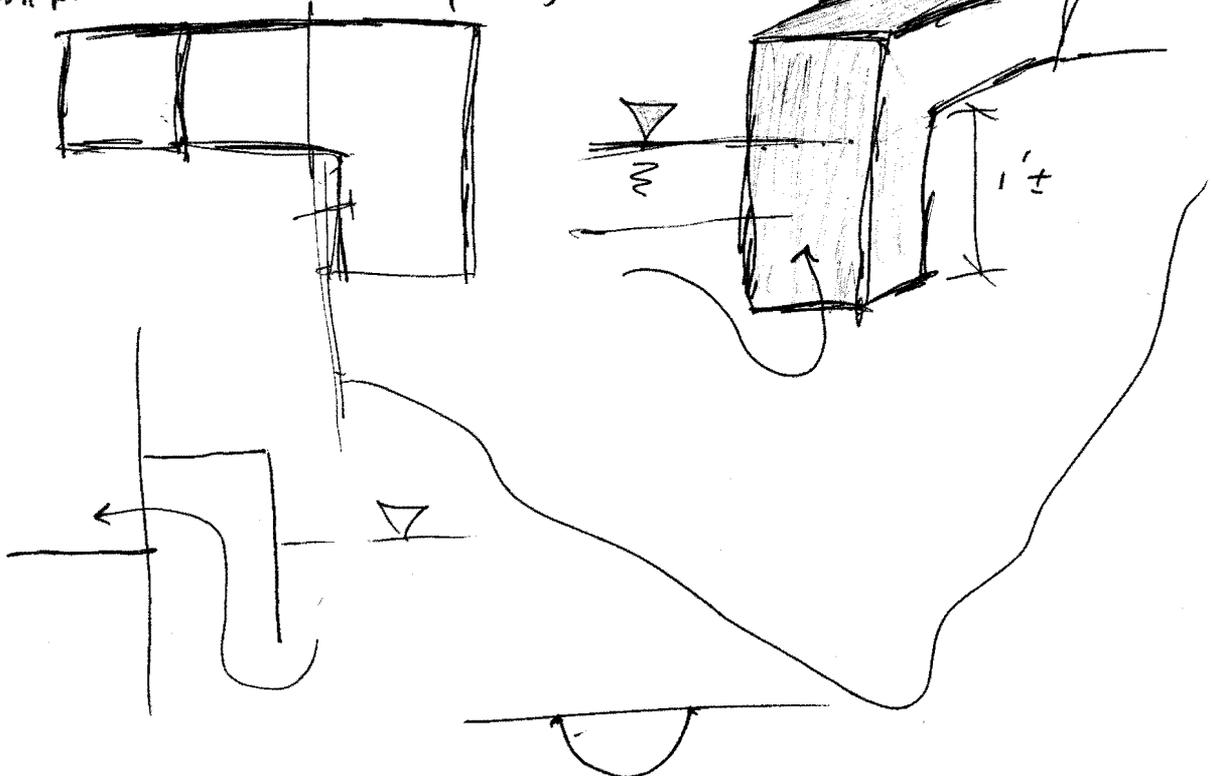

- Rip rap dim. needed several places

- Protection for 7" opening

1 - Level spreader @ end of 18" pipe w/ ^{pyramet} level spreader

2 - Show rip rap @ end of 12" pipe + 3-1.5" pipes - from the forebay

3 - trash protection for orifice opening

C-020-01

ENVIRONMENTAL DIVISION REVIEW COMMENTS
Jamestown Settlement Master Stormwater Plan
August 21, 2002 MDW/DEC

1. The master plan proposes the dedication of a 4.3 acre conservation easement to the County. There was a question raised previously about the ability of the state to grant an easement to the County. To date, that question has not been answered. The viability of the stormwater master plan is dependent on the preservation of natural open space areas in easements. In addition, the area proposed for the easement is located on land not owned by the Foundation. Based on both these considerations, it may be necessary to consider options to onsite open space dedication and pursue an offsite option. The County is open to considering offsite options.
2. A portion of the proposed open space is currently an open field. Once it is placed in a conservation easement, it will need to be allowed to revert to a wooded/forested condition; all maintenance activities will need to cease. Also, the area may need protection from pedestrians and maintenance workers while it is in the process of succession from field to forest.
3. The overall stormwater management plan is acceptable assuming the open space dedication can be resolved. The new proposed wetland BMP has not been designed but design of facilities is typically not required at the master plan stage. The master plan is approved for the *concept* of providing the proposed BMPs and open space shown on this plan thereby achieving the required 10 BMP points. At the time of site plan submission and approval for the improvements that drain to the BMPs, final design and construction drawings will need to be provided.
4. The stormwater management plan proposed a long linear forebay that was located just upstream of the pond/wetland BMP. The proposed parking lot appears to infringe on this feature. Provide assurances that the forebay will be installed and not eliminated by the parking lot; water should not be piped to the pond /wetland BMP.
5. The use of straw bale barriers instead of silt fence is strongly discouraged due to the high maintenance costs of these features. The effective lifespan of a straw bale barrier is three months and the entire length of straw bale barriers would need to be replaced every three months as well as normal maintenance. The effective lifespan of silt fence is eighteen months and would need normal maintenance.

ENVIRONMENTAL DIVISION REVIEW COMMENTS
Jamestown Settlement
SWM-01-01; Master Stormwater Management Plan DEC
March 9, 2001

1. The master plan proposes the dedication of conservation easements to the County. There was a question raised previously about the ability of the state to grant an easement to the County. Has that question been answered?
2. An Open Space Easement is proposed for the area adjacent to the river, which is an RPA. The area currently has some development in it as well as some areas that do not have the three layers of vegetation required to qualify as open space. In order to credit this area as Natural Open Space under the 10-point system, the size of the proposed easement will need to be reduced to include only the vegetated, natural areas. Additional points can be obtained by increasing the size of the other proposed conservation easement.
3. The parking lot to the north of the site is to be expanded and the entrance road relocated to the perimeter of the expanded parking lot. VDOT is proposing the construction of a BMP near the Jamestown Marina to control the road runoff. In earlier meetings, it was proposed to control the parking lot expansion in the same facility. This should be addressed in the master plan as well.
4. Concerning calculation of the open space credit, 0.15 was used as the credit amount. This higher value is to be used for areas adjacent to wetlands, RPAs or mature forests. It should not be used for the RPA itself and any mature forested area that is adjacent to a conservation easement must be protected against development in some manner. These issues will need to be looked at in more detail to determine if the open space areas would be eligible for this additional credit.

ENVIRONMENTAL DIVISION REVIEW COMMENTS
Jamestown Festival Park Drainage Improvements
E&S-06-01
August 3, 2001 DEC

Note: These comments are based on the understanding that this project is only being reviewed for compliance with the James City County Chesapeake Bay program requirements but that the work will not actually be permitted by the County.

Chesapeake Bay Preservation Ordinance:

KMS 1.

There are extensive gravel walks and what appear to be observation areas and a shelter proposed to be located in the Resource Protection Area (RPA). These are located near the boat docking area and proposed for Phase III of the project. Unless an item is a water dependent feature, the Ordinance only provides for the location of passive recreation features in the RPA. While trails and walkways are permitted in the RPA, the observation areas, shelter, and the wide gravel walks may be in conflict with the Ordinance. This is also the area where fairly extensive plantings have recently occurred in the RPA buffer in an attempt to restore some of its water quality function. Discussion will need to occur regarding these items before a determination can be made as to their ability to be located as shown.

shelter has been eliminated
walkway + observation areas are passive recreation.
see sheets C2+C3

KMS 2.

Show on the plan the location of the RPA. Provided on sheet C2+C3

KMS 3.

There is a 4.99 acre portion of the site that is to be placed in a conservation easement to satisfy in part the stormwater management requirements for the site. It is still an unresolved issue as to whether the Jamestown-Yorktown Foundation can dedicate an easement to the County. If it cannot, then an alternate method of preserving the area in perpetuity needs to be developed. Issue is being handled by the owner

Stormwater Management / Drainage:

KMS 4.

The criteria to be used for the channel protection aspect of the BMP is the 24-hour detention of the runoff generated from the 1-year, 24 hour storm. This detention time is determined by the difference in the center of the mass for the inflow and outflow hydrographs. An alternate method is to compute the release assuming the basin fills immediately with the runoff and then is released over 24 hours. The volume of runoff for the 1-year storm is 2.14 ac-ft. Based on this volume, the release should be about 1.1 cfs. Using the calculation procedure in the County's BMP manual, the release rate would be 1.4 cfs. What has been designed only limits the 1-year storm to about 5.7 cfs and only stores about 0.9 ac-ft of volume. Please revise the design to obtain the 24 hour detention required. There is additional information contained in the state's Stormwater Management Manual regarding this calculation procedure. Calculations reworked

COMMENTS OF THE DEPARTMENT OF ENVIRONMENTAL QUALITY

concerning the Environmental Impact Report (EIR) for the Jamestown-Yorktown Foundation's Proposed Improvements to the Jamestown Settlement, revised as the Stormwater Improvements and Boardwalk (agency 425, project code 16474), reviewed under DEQ-01-026S.

The Department of Environmental Quality has determined that the Environmental Impact Report (EIR) for this project, in conjunction with requested follow-up information provided by the Jamestown-Yorktown Foundation (hereinafter "Foundation"), provides the information necessary for evaluation of the project's environmental impacts. The Department (DEQ) has completed its review. The following agencies, planning district commission, and locality joined in this review:

Department of Environmental Quality
Department of Agriculture and Consumer Services
Department of Game and Inland Fisheries
Department of Conservation and Recreation
Department of Health
Marine Resources Commission
Department of Historic Resources
Department of Transportation
Department of Mines, Minerals, and Energy
Chesapeake Bay Local Assistance Department
Hampton Roads Planning District Commission
James City County.

In addition, the National Park Service contributed to this review.

Project Description

As originally contemplated, this project involved a number of changes to approximately 15 acres of land area in the northwestern portion of the Foundation's Jamestown Settlement along the James River. The Foundation proposes to demolish the existing marine railway system, construct a boardwalk through wetlands, improve

drainage at the Indian Village and fort areas, and undertake soil stabilization and landscaping activities. (EIR, page 1.)

The Stormwater Management Master Plan addresses the southwest portion of the site, which is approximately 26 acres overall. That Plan does not include future parking lot improvements or public road realignment to accommodate the parking lot (see the DEQ Comments on the "Entrance Plaza and Parking Lot," DEQ-01-029S, mailed August 1, 2002 as well as the Commonwealth's comments on the National Park Service's Environmental Assessment for "Colonial Parkway Connection to the Realigned Route 359," DEQ-02-106F, dated July 10, 2002). (Plan, page 1.)

Background Information on the Environmental Review Process

As originally submitted on February 13, 2001, the EIR for this project raised a number of questions by reviewing agencies, as a result of which DEQ's Office of Environmental Impact Review (hereinafter "DEQ-OEIR") requested additional information from the Foundation on April 11, 2001. During the course of the multi-agency discussions and correspondence which followed, the nature of this project changed, and its name was changed from "Jamestown Settlement Improvements" to "Stormwater Management Improvements and Boardwalk" to reflect the change in plans. The Foundation provided its last additional information for our coordinated review with a letter dated March 12, 2003.

The issues requiring resolution by the Foundation and reviewing agencies were as follows:

(1) *Stormwater Management.* The stormwater management discussion in the EIR (pages 8, 12, 14, 17, and Appendix B) drew comments from the National Park Service, which owns and manages properties adjacent to the Jamestown Settlement. DEQ-OEIR shared these comments with the Foundation and with the Department of Conservation and Recreation, the Chesapeake Bay Local Assistance Department, and the Department of Transportation in its April 11, 2001 suspension letter and requested additional efforts on the part of the Foundation to discuss matters with appropriate state agencies and the National Park Service, delineate Chesapeake Bay Resource Protection Areas and adjoining projects on maps, and indicate the results of such discussions. See "Environmental Impacts and Mitigation," item 2 and "Regulatory and Coordination Needs," items 2 and 5, below.

Several efforts to resolve issues relating to stormwater management and protection of Chesapeake Bay Resource Protection Areas (RPAs) followed. Discussions between the Foundation and the Chesapeake Bay Local Assistance Department (CBLAD) concluded with CBLAD letters to DEQ dated June 5 and July 25, 2002 and DEQ's letter to the Foundation dated July 31, 2002 (attached). In the latter, DEQ reflected CBLAD concerns regarding use of RPAs for non-water-dependent activities and discussed additional guidance for securing needed Best Management Practices credits required by the Chesapeake Bay Preservation Area Designation and Management Regulations.

In a meeting convened by DEQ and CBLAD on August 7, 2002 at which the Foundation and the DCR James Watershed Office were also represented, the discussion focused on resolution of outstanding issues and revealed an additional problem, in that some of the land area contemplated for a conservation easement, to meet BMP requirements, belongs to the Department of Transportation (VDOT) and cannot be used for stormwater management absent VDOT permission, under the Stormwater Management Law. The Foundation was faced with a choice between re-designing its Master Plan within the boundaries of Foundation-owned land, obtaining permission from VDOT to use its land for stormwater facilities, or purchasing the land from VDOT.

Following the meeting, the parties agreed that the Foundation would work with CBLAD to develop a stormwater management master plan that meets Chesapeake Bay Preservation Act requirements, with or without the VDOT land, and to satisfactorily resolve with CBLAD the concerns articulated in DEQ's July 31, 2002 letter to the Foundation. This has been achieved. See "Environmental Impacts and Mitigation," item 2, below.

A compromise was reached in which the conservation easement can be created outside of VDOT land, but a lease or lease/purchase agreement is being negotiated for purposes of constructing parking lots and buildings associated with the Master Plan and the Maintenance Building (See March 6, 2003 letter from DEQ to VDOT, and VDOT's March 14, 2003 reply, enclosed).

(2) *Historic and Scenic Impacts.* DEQ-OEIR shared comments from the Park Service with the Foundation and with the Department of Historic Resources (DHR) and requested that DHR analyze potential impacts of the proposed project, and other Jamestown anniversary endeavors (see "Project Description," below), and respond to this office. See "Environmental Impacts and Mitigation," item 4, below.

(3) *Endangered Plant Surveys and Mapping.* DEQ-OEIR shared comments from the Department of Conservation and Recreation, and earlier comments from the Department of Agriculture and Consumer Services (reprinted in the EIR) with the Foundation. These comments indicated the need to conduct surveys of the project area for two endangered plants, the small whorled pogonia and the sensitive joint vetch. DEQ-OEIR recommended that the Foundation commission these surveys or make use of prior surveys and indicate survey results to us. This was accomplished. See "Environmental Impacts and Mitigation," item 3, below.

In the intervening time period, the Foundation has completed and submitted the endangered plant surveys and revised stormwater plans. These have been shared with appropriate reviewing agencies.

The documents under consideration in this review include the EIR and also:

- (1) Jamestown Settlement Stormwater Management Master Plan, revised May 2, 2002, prepared by Rickmond Engineering Inc. and submitted by the Foundation in mailings ending June 3, 2002. This document contains 13 pages plus appendices including maps.
- (2) "Jamestown Settlement Master Plan," Sheet No. C-1, dated 4/22/02, submitted in conjunction with item 1. This is a single folded plan sheet.
- (3) Addendum No. 1 to EIR for Jamestown Settlement, "Sensitive Joint Vetch Survey Report; Small Whorled Pogonia Survey Report," dated September 10, 2001, submitted August 28, 2001. This is a document with 4 pages of text and additional appendices;
- (4) Conceptual stormwater drawing, submitted with March 12 letter following resolution of issues between the Foundation and CBLAD.

Conclusion

The Department of Environmental Quality (DEQ) has no objection to this project, provided that it is constructed and operated in accordance with all environmental laws and policies of the Commonwealth, and in accordance with the recommendations herein. As currently proposed, this project is unlikely to significantly affect endangered or threatened plant or insect species, air quality, water quality, or endangered or threatened wildlife species. We recommend that approval of this project be made contingent upon the Foundation's continued cooperation with the Chesapeake Bay Local Assistance Department, the Department of Conservation and Recreation, and the Department of Transportation. The final Stormwater Master Plan must be approved by the Chesapeake Bay Local Assistance Department and the Department of Conservation and Recreation prior to any land disturbance at the project site. Further discussion of these recommendations, and the accompanying analysis, are provided in the remainder of these Comments.

Environmental Impacts and Mitigation

1. Water Quality and Wetlands. The EIR, as augmented, now shows the location of the marine railway which is to be demolished. It appears that the project, as adjusted, may affect vegetated emergent wetlands. The non-tidal wetlands on the site appear to be hydrologically connected to surface waters, and are likely to be characterized as jurisdictional wetlands by the Army Corps of Engineers upon its determination, for which the Foundation has asked (EIR, page 7). If the Corps determines that jurisdictional wetlands are present, the project will require a Virginia Water Protection Permit from DEQ, as well as other permits from the Corps and from the Marine Resources Commission. See "Regulatory and Coordination Needs," item 1, below.

We are mindful of the beneficial water quality impacts of the proposed project. Removal of the deteriorating metal and wood components of the marine railway will eliminate one potential source of water pollution for the adjacent wetland areas and for the James River beyond. Similarly, drainage improvements and landscaping will reduce the amount of suspended sediments entering the James River from the Settlement area

during rainstorms; the addition of stormwater treatment ponds is a good way to accomplish this result (EIR, page 12). We recommend the following additional steps, outside of the permitting requirements described below, to protect water quality and wetlands from the impacts of this project:

- (a) Configure the proposed educational boardwalk to avoid forests, wetlands, and the sensitive vernal pond habitat, to the maximum extent practicable;
- (b) Incorporate effective erosion control measures (see item 2, below) and take precautions to avoid the entry of sediment or contaminants into adjacent wetlands or waterways entering, or bordering, the James River.
- (c) Leave intact any vegetated buffer areas around wetland areas
- (d) Employ low-impact design techniques to minimize the discharge offsite of additional stormwater created by increased impervious surface areas..

In general, the project must demonstrate compliance with section 404 (b)(1) guidelines of the Clean Water Act and with the Commonwealth's wetlands mitigation policies. Both federal and State guidelines recommend avoidance and minimization of wetlands impacts as the first steps in the mitigation process. For unavoidable impacts, DEQ encourages the following practices to minimize the impacts to wetlands:

- Operate machinery and construction vehicles outside of wetlands; use synthetic mats when wetland work is unavoidable;
- Preserve the top 12 inches of trench material removed from wetlands for use as wetland seed and root-stock in the excavated area.
- Erosion and sedimentation controls should be designed in accordance with the most current edition of the Virginia Erosion and Sediment Control Handbook. These controls should be in place prior to clearing and grading, and maintained in good working order to minimize impacts to wetlands. The controls should remain in place until the area is stabilized.
- Place heavy equipment, located in temporarily impacted wetland areas, on mats, geotextile fabric, or use other suitable measures to minimize soil disturbance, to the maximum extent practicable.
- Restore all temporarily disturbed wetland areas to pre-construction conditions and plant or seed with appropriate wetlands vegetation in accordance with the cover type (emergent, scrub-shrub, or forested). The Foundation should take all appropriate measures to promote re-vegetation of these areas. Stabilization and restoration efforts should occur immediately after the temporary disturbance of each wetland area instead of waiting until the entire project has been completed.

- Place all materials which are temporarily stockpiled in wetlands, designated for use for the immediate stabilization of wetlands, on mats or geotextile fabric in order to prevent entry into wetlands. These materials should be managed in a manner that prevents leachates from entering wetlands and must be entirely removed within thirty days following completion of the construction activity. The disturbed areas should be returned to their original contours, stabilized within thirty days following removal of the stockpile, and restored to the original vegetated state.

2. *Chesapeake Bay Preservation Areas.* The EIR identifies Chesapeake Bay Preservation Areas on the property (EIR, pages 9-10 and Appendix I), and states that the only impact to a Resource Protection Area will result from removal of the marine railway. The Foundation commits itself to using state- and locally-approved Best Management Practices (BMPs) in the railway's removal (EIR, page 10). If either the improvements contemplated in this EIR or others mentioned in the master plan for the 400th anniversary celebration (see EIR, Appendix B) will involve re-development or new development of impervious surfaces (the proposed boardwalk would not be considered impervious), they will need to comply with the performance standards of the Chesapeake Bay Preservation Area Designation and Management Regulations (9 VAC 10-20-10 et seq.), including the stormwater management criteria therein.

Following extensive efforts stemming from DEQ's July 31, 2002 letter to the Foundation and the August 7, 2002 meeting, the Foundation developed a revised conceptual stormwater plan for the proposed improvements at the Jamestown Settlement. The plan appears conceptually reasonable to both CBLAD (February 25, 2003 letter, enclosed) and to DCR's James Watershed Office (February 28, 2003 letter, enclosed; see next item). The final design must meet the Performance Criteria of the Regulations cited above in order to be consistent with the Chesapeake Bay Preservation Act (*Virginia Code* sections 10.1-2100 et seq.); this will be determined when CBLAD reviews it (see "Regulatory and Coordination Needs," item 2, below).

According to CBLAD, the proposed plan relies on ground infiltration for treatment of stormwater. A series of underground storm chambers would be used in combination with dry swales (JCC-E2), which is similar to the water quality swale design in the *Virginia Stormwater Management Handbook*. Based on the soils information provided, it does not appear to CBLAD that groundwater will be a limiting factor. However, suitable soils for infiltration are not consistent across the site. Site-specific soil investigations will need to be conducted to ensure that adequate permeability exists for the infiltration BMPs proposed. Otherwise, the soils beneath the chambers will need to be engineered to achieve the requisite permeability.

CBLAD suggested additional alternatives in a conference call with a Foundation consultant on February 20, 2003. These include:

- bio-filtration techniques, which would involve some temporary above-ground storage; or

- a sub-surface alternative, using a trench drain system in lieu of the chambers.

In either case, perforated pipe should be used for conveyances to the BMPs, where possible, to promote additional infiltration.

CBLAD also suggested switching the position of the forebay with the up-gradient underground storage chambers, particularly since this will collect runoff from the large employee parking lot. In addition, the parking lots should have oil/grit separators as a form of pre-treatment. This will extend the longevity of the BMPs as well as extending the time intervals for their maintenance.

The plan should incorporate pre-treatment up-gradient of the BMPs, according to CBLAD. While there are several approaches for this, Minimum Standard 3.10E in the *Virginia Stormwater Management Handbook* addresses how the underground chambers can be used for pre-treatment. The BMPs should not be set up in series, because that would result in the last (most down-gradient) BMP being overwhelmed from the volume of runoff passing through upstream BMPs.

CBLAD has indicated in the past, responding to expansive parking areas proposed in previous iterations of the master plan, that steps should be taken to reduce the amount of impervious surfaces on the site. The Foundation and its consultants indicate that the 212 proposed parking spaces are necessary for employee parking. Accordingly, CBLAD highly recommends the use of permeable surfaces in the parking areas. This will address the performance criteria in the Regulations cited above, in addition to promoting infiltration and reducing runoff volumes and velocities. In addition, CBLAD recommends the use of depressed bio-retention areas in the parking lots instead of raised planting islands.

3. Erosion and Sediment Control; Stormwater Management. This project will require an Erosion and Sediment Control Plan, because, as indicated in the foregoing discussions, it will involve a land-disturbing activity of 10,000 square feet or more (2,500 square feet or more in Chesapeake Bay Preservation Areas such as the project site). Accordingly, the Foundation must prepare a project-specific Erosion and Sediment Control plan for review and approval by the Department of Conservation and Recreation's Division of Soil and Water Conservation (DSWC). An approved plan is required prior to initiation of any land-disturbing activity at the project site. See "Regulatory and Coordination Needs," item 5, below.

As revised, the project is in the nature of a stormwater management project. Accordingly, it must be approved before any land disturbance takes place in the project area. See "Regulatory and Coordination Needs," items 2 and 5, below.

DCR's James Watershed Office has participated in the reviewing agencies' discussions of stormwater questions with the Foundation over the past two years (see "Environmental Review Process," item 1, above). On February 20, 2003, that Office joined CBLAD and the Foundation in reviewing the revised conceptual stormwater

management master plan for the proposed improvements at the Jamestown Settlement. Based on this review and subsequent conference call discussions, DCR agrees with the conceptual plan. The plan proposes infiltration as the main practice for meeting the State's water quality requirements. The Foundation's consultant agreed that if the existing soils were not suitable for the proposed stormwater plan, necessary material would be transported to the site to meet infiltration design specifications.

DCR's James Watershed Office reminds the Foundation that final plans must be submitted to DCR for a land disturbance permit. In addition, Erosion and Sediment Control Plans and Stormwater Management Plans must be approved before any land disturbance may begin; see above and also "Regulatory and Coordination Needs," item 5, below.

4. Natural Heritage and Wildlife Resources. According to the Department of Conservation and Recreation, natural heritage resources are documented as present in the vicinity of the project. "Natural heritage resources" are defined as the habitat of rare, threatened, or endangered plant and animal species, unique or exemplary natural communities, and significant geological formations. Due to the scope of project activity and the distance to the resources, however, the project is not expected to adversely affect these resources.

Specifically, there is a bald eagle nest approximately one mile from the project site, according to the Department of Game and Inland Fisheries. The bald eagle (*Haliaeetus leucocephalus*) is listed as threatened by both the state and federal governments. The Department of Game and Inland Fisheries indicates, however, that because of the project scope and location, it does not anticipate that the project will give rise to significant adverse impacts upon bald eagle nesting.

The Foundation commissioned the endangered plant survey for the sensitive joint vetch and the small whorled pogonia, and submitted a survey report to DEQ-OEIR, DCR, and the Department of Agriculture and Consumer Services (DACS), which has responsibility for endangered and threatened plant and insect species. DACS has indicated its agreement with the conclusion of the survey report, which is that these two plants are not found at the project site.

5. Historic and Archaeological Resources. With respect to archaeological resources, the Department of Historic Resources (DHR) recommended a cultural resources survey in its June 15, 2001 comments. In addition, DHR indicated then that proposed placement of stormwater facilities in wetlands, an activity subject to Corps of Engineers permitting, would necessitate the Foundation's consultation with DHR, the Army Corps of Engineers, and the National Park Service under Section 106 of the National Historic Preservation Act. The Area of Potential Effect might include other projects planned by the Foundation, in which case the Corps might have to consider cumulative impacts upon historic properties. The Park Service would be able, in such a scenario, to request consulting party status and to express its views on the cumulative

impacts of these projects on all Foundation projects located within the Area of Potential Effect.

DHR recommended that a cultural resources survey be conducted to cover the parts of the project area involving the revised stormwater management plan. This survey should identify the full range of historic properties that may be affected by the plan, including architectural, landscape, and archaeological resources. The survey should be conducted by qualified professionals in accordance with the state *Guidelines for Conducting Cultural Resources Surveys in Virginia: Additional Guidance for the Implementation of the Federal Standards* (see *Secretary of the Interior's Standards and Guidelines* (Volume 48, Federal Register, September 29, 1983, page 44742)).

Questions on the consultation requirement may be addressed to the Department of Historic Resources. See "Regulatory and Coordination Needs," item 3, below.

6. *Air Quality*. James City County is part of an ozone (O₃) maintenance area and an emission control area for the contributors to ozone pollution, which are volatile organic compounds (VOCs) and oxides of nitrogen (NO_x). This has two practical consequences for project development. One is that the Foundation should take all reasonable precautions to limit emissions of VOCs and NO_x, principally by controlling or limiting the burning of fossil fuels. A second precaution, stemming from 9 VAC 5-40-5490 in the Regulations for the Control and Abatement of Air Pollution, is that there are some limitations on the use of "cut-back" asphalt (liquefied asphalt cement, blended with petroleum solvents) that may apply in the construction of the roads or paths associated with the project. The asphalt must be "emulsified" (predominantly cement and water with a small amount of emulsifying agent) except when specified circumstances apply. Moreover, there are time-of-year restrictions on its use during the months of April through October in VOC emission control areas.

During construction, fugitive dust must be kept at a minimum by using control methods outlined in 9 VAC 5-50-60 et seq. of the Regulations for the Control and Abatement of Air Pollution. These precautions include, but are not limited to, the following:

- Use, where possible, of water or chemicals for dust control;
- Installation and use of hoods, fans, and fabric filters to enclose and vent the handling of dusty materials;
- Covering of open equipment for conveying materials; and
- Prompt removal of spilled or tracked dirt or other materials from paved streets and removal of dried sediments resulting from soil erosion.

In addition, if project activities include the burning of construction or demolition material, this activity must meet the requirements for open burning under 9 VAC 5-40-5600 et seq., and it may require a permit (see "Regulatory and Coordination Needs," item 4, below). The regulation provides for, but does not require, the local adoption of a model ordinance concerning open burning; accordingly, we recommend that the

Foundation contact James City County officials to determine what local requirements, if any, exist. Some applicable provisions of the model regulation include, but are not limited to:

- All reasonable effort shall be made to minimize the amount of material burned, with the number and size of the debris piles;
- The material to be burned shall consist of brush, stumps and similar debris waste and clean burning demolition material;
- The burning shall be at least 500 feet from any occupied building unless the occupants have given prior permission, other than a building located on the property on which the burning is conducted;
- The burning shall be conducted at the greatest distance practicable from highways and air fields,
- The burning shall be attended at all times and conducted to ensure the best possible combustion with a minimum of smoke being produced;
- The burning shall not be allowed to smolder beyond the minimum period of time necessary for the destruction of the materials; and
- The burning shall be conducted only when the prevailing winds are away from any city, town or built-up area.

7. Transportation Issues. A consulting firm, under contract to the Department of Rail and Public Transportation, is developing a plan for traffic mitigation for the Jamestown area during the 2007 commemorative activities. Several Department of Transportation (VDOT) representatives are among the state and federal officials involved in the study. Other projects proposed by the Foundation, including the Entrance Plaza and Parking Lot Expansion (DEQ-01-039S, Comments mailed August 1, 2002), are in VDOT's right-of-way, and cannot be constructed until the right-of-way has been properly conveyed, pursuant to approval by the Commonwealth Transportation Board. In a March 14 letter (enclosed), VDOT indicated that the Foundation no longer has need of the VDOT right-of-way in order to create a conservation easement. See preceding discussion of this matter in "Environmental Review Process," item 1, above.

8. Solid and Hazardous Waste Management. The EIR indicated that no generation, storage, or usage of hazardous materials would be involved with this project (page 9). DEQ's Waste Division had no objection to this conclusion.

DEQ recommends that the Foundation reduce solid waste at the source, re-use it, and recycle it to the maximum extent practicable in this and other projects.

9. Pollution Prevention. The DEQ advocates that principles of pollution prevention be used in all construction projects as well as in facility operations. Effective siting, planning, and on-site Best Management Practices (BMPs) will help to ensure that environmental impacts are minimized. However, pollution prevention techniques also include decisions related to construction materials, design, and operational procedures that will facilitate the reduction of wastes at the source. We have several pollution prevention recommendations that may be helpful in constructing or operating this project:

- Consider development of an Environmental Management System (EMS). An effective EMS will ensure that the proposed facility is committed to minimizing its environmental impacts, setting environmental goals, and achieving improvements in its environmental performance. DEQ offers EMS development assistance and recognizes facilities with effective Environmental Management Systems through its Virginia Environmental Excellence Program.
- Consider environmental attributes when purchasing materials. For example, the extent of recycled material content, toxicity level, and amount of packaging should be considered and can be specified in purchasing contracts.
- Consider contractors' commitments to the environment (such as an EMS) when choosing contractors. Specifications regarding raw materials and construction practices can be included in contract documents and requests for proposals.
- Choose sustainable materials and practices for infrastructure and building construction and design. These could include asphalt and concrete containing recycled materials, and integrated pest management in landscaping, among other things.
- Integrate pollution prevention techniques into facility maintenance and operation, to include the following: inventory control (record-keeping and centralized storage for hazardous materials), product substitution (use of non-toxic cleaners), and source reduction (fixing leaks, energy-efficient HVAC and equipment). Maintenance facilities should be designed with sufficient and suitable space to allow for effective inventory control and preventive maintenance.

DEQ's Office of Pollution Prevention provides free information and technical assistance relating to pollution prevention techniques and EMS. If interested, the Foundation may contact that Office (Tom Griffin, telephone (804) 698-4545).

10. Local and Regional Concerns. James City County indicated concerns, in the initial review of this project, over excessive clearing in an area that may be needed for open space BMP points (see item 2, above). The boardwalk area, as originally proposed, is infested with invasive ivy, which may kill the trees in the area and cover the boardwalk. There may be an environmental education opportunity in this regard. The County asks that the Foundation show the 150-foot Community Character Buffer along Jamestown Road.

The County strongly urges the Foundation to allow the National Park Service and the Association for the Preservation of Virginia Antiquities (APVA) to review and comment on plans as they are developed or changed. The Park Service and APVA are directly affected by Foundation projects and have long involvement with the planning process for these projects.

The Hampton Roads Planning District Commission urges that the Foundation work closely with the County in addressing these and other matters.

Regulatory and Coordination Needs

1. *Water Quality Regulation.* Activities affecting wetlands or waterways may require a Virginia Water Protection Permit from DEQ and a Section 404 permit from the Army Corps of Engineers. Questions in this regard may be addressed to DEQ's Tidewater Regional Office (Harold Winer, Deputy Regional Director, telephone (757) 518-2153).

2. *Chesapeake Bay Preservation Areas and BMP Credits.* This project must comply with the Chesapeake Bay Preservation Act (*Virginia Code* sections 10.1-2100 et seq.) and its implementing regulations (9 VAC 10-20-10 et seq.). Accordingly, the Foundation must continue to work with the Chesapeake Bay Local Assistance Department (Catherine Harold, telephone (804) 371-7501) to ensure compliance with James City County's ordinance developed pursuant to the Chesapeake Bay Preservation Act.

3. *Historic Resources.* If there are federal jurisdictional wetlands at the site, the Foundation must comply with section 106 of the National Historic Preservation Act of 1966, as amended. For section 106 consultation and other questions relating to historic resources and archaeological survey needs, the Foundation should consult the Department of Historic Resources (Dr. Ethel Eaton, telephone (804) 367-2323, extension 112).

4. *Air Quality Regulation.* Open burning of debris or refuse may require a permit from the DEQ's Tidewater Regional Office (see "Environmental Impacts and Mitigation," item 5, above). The Foundation should contact that Office (Jane Workman, Air Permits Manager, telephone (757) 518-2112) for information on this requirement and its applicability to the project.

5. *Erosion and Sediment Control Plans; Stormwater Management Plans.* Erosion and Sediment Control Plans must be prepared in accordance with the Virginia Erosion & Sediment Control Handbook, Virginia Erosion and Sediment Control Law (*Virginia Code* sections 10.1-560 and 10.1-564) and the Virginia Erosion and Sediment Control Regulations (4 VAC 50-30-30 and 4 VAC 50-30-100). Similarly, the Stormwater Management Plan must meet the requirements of the Virginia Stormwater Management Law (*Virginia Code* section 10.1-603) and the Stormwater Management Regulations (4 VAC 3-20-210 through 3-20-245). Approval of such Plans by the Department of Conservation and Recreation is pre-requisite to any land disturbance in the project area. Questions relating to these Plan requirements may be addressed to the Department of Conservation and Recreation's James East Watershed Office (Robert Cooper, telephone (804) 786-1359).

6. Subaqueous Bed Encroachment. Removal of the marine railway may not require authorization from the Marine Resources Commission. However, the use of forced water to excavate below the sediments may require such authorization, since it may be an encroachment in, on, or under a State-owned bottomland (riverbed). Similarly, activities in wetlands connected to the James River may require a permit from the Marine Resources Commission.

The Marine Resources Commission also coordinates the Joint Federal-State Permit Application (JPA) process for water resources permitting, which involves the DEQ and the Corps of Engineers as well as the Commission. Questions on Commission permit applicability and on the joint process, as well as requests for copies of the Joint Permit Application, may be directed to the Commission (Traycie West, telephone (757) 247-2200).

7. Land Use. As the Department of Transportation (VDOT) indicates, the Foundation no longer needs the VDOT right-of-way in order to create a conservation easement. However, it still needs portions of the right-of-way to construct parking lots and buildings. We recommend that the Foundation continue to work with VDOT's Hampton Roads District construction engineer, John Neal (telephone (757) 925-2508), in this regard.
